BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 6, 1883.

NOTES OF THE WEEK.

The spirit of the first message of Mayor Edson, of New York, turns upon the assertion that the improvements of the city have lamentably failed to keep pace with its remarkable growth in population and commerce. "It will be observed," says the mayor of New York, "that our wharves and piers are inadequate to the accommodation of the commerce which seeks them; that the supply of water is wholly insufficient for domestic and manufacturing purposes; that the force and facilities for extinguishing fires are too limited in many portions of the city; that the police accommodations in several districts are by no means what they should be; that hospital accommodations, especially for the reception of those affected with contagious diseases, are almost entirely wanting, and that the work of beautifying the city has been neglected, and cannot be viewed with just pride by its citizens." This while investigation reveals that "money in abundance has been provided from year to year" for public improvements, "not only proportionate to the city's present requirements, but sufficient to make reasonable provision for its future and greater growth." As something preliminary, of necessity, to the correction of the evils pointed out, Mayor Edson recommends a return of the governing power from Albany to the city; that local self-government must be insisted upon, and that to this end he will be pleased to coöperate with the Board of Aldermen. It is agreed that the first thing to be done in the effort to secure better government for New York city, should be to transfer the seat of government from Albany to this city; but the movement to this end must begin further back than with the mayor and the Board of Aldermen. Before the point is gained it will be necessary for the men who own the city of New York to organize for a prolonged effort that can only end with success.

The first week of the new year has been distinguished on the Stock Exchange by a lively bout between the professional bulls and bears, upon which the great public has gazed, to all appearance, with supreme indifference. The bulls have had the best of it. There was a bad break in prices on the opening day of business, and this took place mainly in the best of dividend-paying stocks; but following that came a turn upward, which has moved with accelerating pace since, and yesterday culminated in a rush which seemed to indicate almost a panic among the crowd of small bears. There is no public buying in the market yet, the trading being strictly local; but the operators who have stocks to sell are hoping for the best.

At a meeting of the Chamber of Commerce on Thursday last the chairman of the Committee on Harbor and Shipping read a report on the methods for the revival of American shipping, which recommended the passage of the bill dealing with that subject prepared by Mr. Dingley. Some criticism upon the provisions of the bill was made, however, for the reason, among others, that it afforded too many loopholes for sailors to evade the law and to secure an advance upon their wages. Amendments were recommended providing for the cancellation of drawbacks endorsed on the registers, and proposing that an allowance of 40 per cent. should be made after five years from the payment of the drawback and a like allowance for every five years thereafter. An amendment allowing registered vessels the privilege of going from one coastwise port to another to load for a foreign port was also recommended. The question of pilotage, the committee added, was before the Special Committee on Pilotage, which was preparing a bill to present to the Legislature. The report of the committee, after some discussion, was adopted by the Chamber. They also adopted a petition to the Legislature which urged the preservation of the greatest possible depth of water in the channels leading to the port of New York as of the utmost importance. Dredging, it was said, was constantly necessary in all parts of the harbor, and immense quantities of dredgings were being deposited within the harbor despite the laws. The dredgings, if allowed to remain, become sources of obstruction in most important channels. An appropriation for the enforcement of the laws in regard to this matter was asked for.

From time to time, as occasion demanded, we have directed attention to the marked progress which the idea of civil-service reform was making in the sentiments of the people. It is gratifying to note that the idea has, to all appearances, found as much favor with the majority of our national representatives as it has with the people themselves. No more striking indication of the extent of the progress which has been made could be given than was afforded by the result of last week's final debate in the Senate. The friends of reform then succeeded in bringing the Pendleton bill to a vote and in passing it by a very large majority. The full significance of the vote in the Senate will be understood when it is considered that our upper house contains probably the most conservative body of legislators in the country. The enemies of the bill sought to embarrass its passage by numerous unnecessary and silly amendments, but these were, for the most part, brushed aside. Senator Plumb's proposition to fix a tenure of office of six years, and to make employés who should serve for six years eligible for a second term of six years, was promptly rejected. The action of the Senate upon this subterfuge was particularly to be commended. The introduction of prescribed terms of service was intended to secure a certain end of the tenure of civil servants, and our political history shows that patronage-mongers desirous of effecting removals have always made use of it as a convenient cover for their schemes of proscription.

The success of the bill in the House of Representatives must have been a surprise both to its friends and its enemies. Even those in charge of the bill did not anticipate so sudden an ending of their labors. The bill was introduced by Mr. Kasson, who, in making his report, asked in behalf of the committee that the House should finish the bill this week. The House seemed willing and more than willing to grant his request. Amid much confusion, Mr. Cox, of New York, said that he considered the Shipping bill quite as important as that for civil-service reform, and, in order to save a long discussion and in view of the fact that the Pendleton bill had been very thoroughly discussed in the Senate, he proposed that it be passed without debate. The House took him at his word. The previous question was ordered, and the bill hurried through to its passage, the House being too impatient even to listen to Mr. Kasson's plea for the correction of some errors of detail which he had discovered. After only thirty minutes' debate, it was passed by a vote of more than three to one. The bill has now practically become a law, since it will, of course, be signed by the President, who has already promised the measure his countenance and support.

In his message to the Massachusetts Legislature Governor Butler covered a great variety of topics. In relation to a number of them he was far from being uninteresting. After discussing the financial condition of the commonwealth, considerable stress was laid on the importance of the Hoosac Tunnel and Troy & Greenfield Railway management. A full treatment of the subject was promised in a special message. "Free and equal suffrage" to all was advocated, and an argument presented in favor of "women's suffrage," as was to be expected, considering Governor Butler's well-known views on that subject. The Governor urges the infliction of the death penalty as a punishment for all attempts to derail trains, after which he gives his views at some length regarding the management of institutions for receiving the indigent and criminal classes. Dealing in futures and on margins is condemned, but beyond that little of practical importance is touched upon.

In Gambetta, France has, without doubt, lost her strongest individual political force. That he had grown to be the mainstay of the conservative republicans is apparent from the zeal with which the Radicals, Legitimists and Bonapartists alike assailed him. The tone of the German press, too, which regarded the dead man as the representative of the idea of a "war for revenge" to recover the lost provinces, indicated that they regarded him as the embodiment of the aggressive national idea. His immediate followers, of course, idolized him, and the voices that proclaimed his fame found applauding echoes even among those who shape the public opinion of France's jealous island neighbor. Under the circumstances it is not unnatural that the measure of his country's loss in the decease of the republican leader should have been exaggerated. France has long since progressed beyond the point when the death of an individual could determine the existence of any particular polity within her borders. The year 1879, which saw the election of Grévy, and the early winter of 1882, which witnessed the ex-dictator's peaceful fall from power, demonstrated, if demonstration were necessary, that the republic was greater than the individual. While the dead statesman must be allowed to have declined somewhat in strength with the people during recent years, every year and every day that has gone over the republic has added to its strengh. This is a fact which those are soon likely to learn who now seize the occasion of public sorrow to raise the cry of faction or of enmity.

TRADE DISASTERS FOR 1882 AND THE BUSINESS OUTLOOK.

The full returns make the total failures of the year, as reported to BRADSTREET'S, 7,635, against 5,929 in 1881, 4,350 in 1880 and 6,652 in 1879. In Canada and the provinces 755 failures are reported for 1882, against 607 last year. The liabilities of bankrupt traders in the United States for each of the four years foot up as follows: for 1882, $93,238,000; for 1881, $76,094,000; for 1880, $57,120,000, and for 1879, $99,636,000. It is thus seen that, while the failures in 1882 are 23 per cent. greater than the number in 1881, the total liabilities are 18 per cent. greater than for 1881. The percentage of assets to liabilities for 1882 is 51, against 47 per cent. in 1881. Compared with 1880 the returns for the last year reveal an excess in number amounting to 43 per cent. The liabilities show an excess of 39 per cent. as compared with 1880. The percentage of assets to liabilities in 1882 is 51; in 1880, 48 per cent. Compared with 1879, the number of failures in 1882 is 6,652, or 13 per cent. in excess. The total liabilities are $99,636,000, or 6 per cent. below the returns for 1879, while the percentage of assets to liabilities for 1882 was 51, and for 1879, 49 per cent. The average liabilities of each failing trader in 1882 was $12,212; in 1881 $12,838; in 1880 $13,131; and in 1879 $14,978. The average liabilities of the 1,202 failing traders in New England in 1882 was $13,331, the percentage of assets to liabilities being 55. The 1,765 failing traders of the middle states for 1882 have average liabilities of $17,432, the percentage of assets to liabilities being 49. In the southern states 1,543 failures occurred, with an average liability of $12,724, the percentage of assets to liabilities having been 52. In the western states 2,358 failures have an average liability of $8,864, the percentage of assets to liabilities having been 51 per cent. The Pacific states of California, Oregon and Nevada report 649 failures for 1882, against 616 in 1881, 639 in 1880, and 838 in 1879, the year of trade revival. The average of liabilities to each failure on the Pacific coast in 1880 was 10,940, and the percentage of assets to liabilities on the total return in the states named is 48, against 38 per cent. in 1881, 52 in 1880, and 47 per cent. in 1879. For the entire country the percentage of assets to the liabilities of failing traders during 1882 was 51, in 1881 the percentage was 47, in 1880 48, while in 1879 the assets were equal to 49 per cent. of liabilities. It is believed that these figures as to the percentage of assets are as nearly correct as is possible without absolute returns from the records of bankruptcy courts or otherwise. In France the compulsory registration of traders does much to bring out the true meaning of bankruptcy statistics. Special attention is directed to the analytical table given elsewhere of the year's failures by trades. It is, of course, impossible to classify the failures with exactness on the basis of trades, but the table is so close as to contain a deal of instruction. Of the 7,635 failures in the United States for the year, 4,787 were made up as follows: Boots and shoes, 334; clothing, cloths, etc., 353; dry and fancy goods, 477; general stores, 1,443; grocers and confectioners, 1,483; liquor dealers, 339; produce and provision dealers, 358. The large number of general traders reported failed and other similar points contained in the table given below show how greatly the credit system of the country is involved with its retail business. We have repeatedly urged upon the business community the need of restricting the credit system so that it shall not have so much to do with the retailers. The consumer should pay cash. It is thought that this is about the only practical advice worth giving in relation to the further healthful development in the matter of granting mercantile credits. It is believed that a good deal has been accomplished in this direction already by the leading traders in some of the large cities, who have been adhering to cash payments with striking success.

The following table gives the number of failures in the United States for 1882, with the liabilities and assets:

FAILURES FOR 1882.

	No.	*Assets.*	*Liabilities.*
New England	1,202	$8,935,425	$16,023,826
Middle	1,765	14,940,664	30,768,062
Southern	1,543	10,120,668	19,634,030
Western	2,358	10,624,840	20,890,488
Pacific	649	2,441,729	5,030,154
Territories	118	406,348	892,376
Totals	7,635	$47,469,674	$93,238,936

Below is a comparison of failures in the United States for the first, second, third and fourth quarters of 1882:

NO. OF FAILURES.

Divisions.	*1st qr.*	*2d qr.*	*3d qr.*	*4th qr*
New England states	334	293	258	317
Middle states	477	368	365	555
Southern states	576	243	237	485
Western states	621	452	532	753
Pacific states	115	123	239	172
Territories	23	24	25	46
Totals	2,146	1,503	1,658	2,328

Following is an analysis of the year's failures by trades:

Trades.	*Totals. U.S.*
Agricultural implements	26
Bakers	47
Banks and bankers	28
Boots and shoes	334
Brewers and maltsters	20
Carpets, oilcloths, etc	11
Carpenters, builders, masons, etc	76
Carriages and wagons	50
Clothing, cloths, etc	353
Coal and wood	39
Cotton	32
Crockery, glassware, etc	46
Drugs and chemicals	163
Dry and fancy goods	477
Furniture and undertakers	133
General stores	1,443
Grocers and confectioners	1,483
Hardware, iron, steel, etc	223
Hats, caps and furs	87
Hides, leather and harness	102
Hotels and restaurants	183
Liquors, wines, saloons, etc	339
Lumber, builders' materials, etc	59
Millinery and straw goods	109
Miscellaneous	895
Music, musical instruments, etc	15
Oils, paints, etc	35
Paper, books, printers, etc	114
Pictures, artists' materials, etc	21
Produce, provisions, fruits, etc	358
Rubber goods	4
Sewing machines	6
Tobacco and cigars	142
Toys, notions, etc	27
Watches, jewelry, etc	132
Wood and willow ware	3
Wool	20
Totals	7,635

Following is a comparison of failures in the United States for 1879, 1880, 1881 and 1882:

Divisions.	*No. of failures.* 1879.	1880.	1881.	1882.
New England states	1,201	813	994	1,202
Middle states	1,871	1,063	1,409	1,765
Southern states	1,963	711	1,313	1,543
Western states	1,664	1,086	1,502	2,358
Pacific states	838	639	616	649
Territories	15	38	95	118
United States	6,652	4,350	5,929	7,635

The large number of failures occurring during the last quarter of the year is in good part due, as already indicated, to the effect of the general readjustment of prices which has been going on. This so far as relates to immediate causes. Back of that, of course, lies the fact that with trade at the full for so long a period throughout the United States, a good deal of over-trading necessarily resulted. From such conditions an increased number of enforced liquidations have naturally been brought about. It should be borne in mind, however, that in the last and first quarters of about every year it is customary to expect an increased number of disasters, as the period indicated is the time of annual balance-sheets and settlements. While the number of failures for the week just ended is larger than for any previous week in two years, we see no sufficient reason for believing that the number will not decrease as the succeeding weeks of the winter are reported; that, instead of settling down to extreme depression, the country will gradually enter a period of quicker sales and advancing prices.

THE NEED OF A PERMANENT TARIFF.

It is becoming more and more apparent that a permanent settlement of the tariff question cannot be reached under existing conditions. This was to have been expected. In discussing the work of the Tariff Commission we have heretofore called attention to the peculiar difficulties attending the task attempted by them. The chief of these were the obstacles to a proper interpretation of our past experience which were inherent in the evidence itself upon which the report was based, the hazard of permitting ably and persistently presented claims to assume undue proportions in the scheme of revision to be formulated, and the evident impossibility of endeavoring, by balancing against each other the various interests claiming recognition, to arrive at a conclusion which should be accepted as effecting a just settlement of the tariff. It was plain that the effort to deal with a vast mass of multifarious details in detail simply, and without reference to principle, could never result in a harmonious and consistent system. This was already manifest before the report of the commission appeared; indeed, at an early stage in the work of the commission we pointed out that, at least as far as the public at large were concerned, the chief interest attaching to the proceedings of that body lay in the fact that they brought into clear relief the stupendous difficulty of so adjusting a high tariff as to protect all interests and oppress none. That, in the opinion of Congress, the work of the commission has not been successful is apparent from the fact that committees of both houses are freely revising the revision. The work of considering the revision may be said to have only begun; the methods adopted are not such as promise success, being likely to result in two bills. For reasons which we indicated last week, the prospect of passing a tariff bill during the remainder of a busy session is not a very promising one. It is apparent that business men, into whose calculations the tariff enters as a factor, will have to endure a still longer period of uncertainty.

This state of affairs is very much to be regretted in the interest of a healthful trade development. Its effect must be to deaden the pulse of enterprise, since business men are naturally unwilling to embark their means in ventures which may be wrecked by the caprice of the legislature. The evil results of this condition of things is not confined to the particular branches of trade most affected by proposed changes in the tariff, but through a natural sympathy their hurtful influence is quickly communicated to other departments of industry. Of the business man, even more than of any other member of society, it may be said that he is concerned not so much that the administration of justice shall be absolutely perfect as that there shall be permanence and certainty in the law by which he shapes his actions. One of the chief problems of interest to the business man at the present time is how to secure a definite and permanent settlement of the ever-recurring tariff question. The solution of this problem involves the ascertainment of the principle upon which our tariff system should be based. It seems to us, judging by the light of experience, that this result can only be arrived at in the same way in which other questions of principle have been determined in this country, namely, by a division of parties upon the point in dispute. Whatever arrangements have been brought about otherwise than in this manner have been at best only temporary settlements; in this method alone is there any guarantee of reasonable permanence. If the representatives of the people, elected on the issue of protection or free trade, shall decide for the protective policy, let it be so understood, and let a consistent and comprehensive law be framed to embody and give effect to that policy. If, on the other hand, the people shall decide in favor of a tariff for revenue, prudence will suggest that the approach to that system be gradually made, so that the vested interests which have grown up and have been fostered under the protective policy may not be arbitrarily and suddenly interfered with. In making this suggestion we do not wish to be understood as desiring to bring politics into business; that, we are convinced, cannot well be done, at least for any great length of time. What we desire to impress upon the people of the country, and especially upon its business men, is that, in the absence of any great public question sharply dividing party lines, the way is open for a new issue, and that they should insist that their representatives shall have less to do with the problem of securing and distributing spoils, which has been attracting so large a share of their attention, and shall prepare themselves to deal with some of the great economic questions which the developments of the last quarter of a century have brought into the foreground.

GOVERNOR CLEVELAND ON TAXATION.

The initial message of Governor Grover Cleveland, of New York, saw the light this week. Regarding the present confused condition of the state's tax laws he said:

> The imperfection of our laws touching the matter of taxation, or the faulty execution of existing statutes on the subject, is glaringly apparent. The power of the state to exact from the citizen a part of his earnings and income for the support of the government, it is obvious, should be exercised with absolute fairness and justice. When it is not so exercised the people are oppressed. This furnishes the highest and the best reason why laws should be enacted and executed which will subject all property, as all alike need the protection of the state, to an equal share in the burdens of taxation, by means of which the government is maintained. And yet it is notoriously true that personal property, not less remunerative than land and real estate, escapes to a very great extent the payment of its fair proportion of the expense incident to its protection and preservation under the law. The people should always be able to recognize, with the pride and satisfaction which are the strength of our institutions, in the conduct of the state the source of undiscriminating justice, which can give no pretext for discontent.

New York city is a great loan market. It is, year by year, becoming more and more a mart whither will be sent the world's savings. Progress in this direction is facilitated or retarded by the character of the tax laws of New York state.

When writing on this same subject, in the spring of 1880, we said:

> The taxation of personal property was entered upon in New York state at a time when a man's personal estate consisted for the most part of tangible things which the assessor could easily get at, and whose value he could estimate with tolerable precision. But in late years, when the varieties of personal property are coextensive with an exceedingly complex condition of society, it is an easy matter for the owner of personal estates to elude the

vigilance of the tax gatherer through the intangible character of his possessions. The result is, of course, to collect personal property taxes from the honest part of the community, while the shrewder people escape entirely. Thus a law which is intended to affect all classes equally becomes the instrument of discrimination and oppression. The existing need is a recognition of the difference between things and the evidence of property rights in things. Thus a certificate of stock is simply evidence that its holder is part owner of the property and franchises of this or that corporation. The property should be taxed through the corporation, which is but the common representative of the stockholder.

It is only possible to repeat the above now. Governor Cleveland might do well to look at the report of Mr. Wells, which was made at the instigation of the state of New York. It is very unfortunate that the Empire State should further suffer through the crudity of its tax laws. Governor Cleveland gives unmistakable evidence that he has not taken the trouble to inform himself regarding this matter of taxation. He has need to learn that you should never tax anything that could and would run away and that could and would come to you.

NEW YORK STATE BANKS.

The annual report to the Legislature at Albany by Superintendent A. B. Hepburn, of the State Banking Department, contains a plain statement concerning the banking institutions chartered under the laws of the state of New York, and the changes taking place during the year ended September 30, 1882. It appears that the state banks are "prosperous and strong," their aggregate resources exceeding the total September 30, 1881, by $430,000. There were five more banks of discount and deposit in operation on the date of the report than at the close of the preceding fiscal year, the total being seventy-six. New banks were organized and chartered under the state law during the year as follows:

	Capital.
Dundee State Bank	$50,000
German-American, Buffalo	100,000
Madison Square, New York	200,000
State Bank, Bolivar	100,000
East Aurora, Bank of	30,000
Manufacturers', Amsterdam, from national to state	80,000
Bank of State of New York, New York city	800,000

Two state banks were closed within the fiscal year. The first was the Island City Bank of New York, which became the Garfield National Bank, and the Merchants' Bank of Watertown, which failed February 18 last. The receiver reported that "the sole cause of its failure was the reckless lending of money, without security, for speculative purposes, two individuals (directors of the bank) having received loans in excess of the capital stock of the bank" ($210,000). The general business of the bank was good. There were fourteen regularly organized trust, loan and mortgage companies in the state under the supervision of the Banking Department. Of the fourteen institutions for the safekeeping and guaranteeing of personal property in operation October 1, 1882, ten were organized prior to October 1, 1881. The four last referred to were the Manhattan Safe Deposit and Storage Company, Knickerbocker Safe Deposit Company, American Safe Deposit Company and Mount Morris Safe Deposit Company, all being located in the city of New York. The total capital is $2,676,900.

The recommendations of Superintendent Hepburn are plainly expressed and appear to be sound. He recommends, as he did last year, that the law requiring building, mutual loan and accumulating fund associations to report to the department be repealed as it is practically a dead letter, owing to the inability of the department to enforce an investigation into their affairs unless asked in writing so to do by the stockholders.

On September 30, 1882, $1,214,658.43 of securities were held by the superintendent in trust for banking associations and individual bankers and trust companies, divided as follows, viz: Bonds and mortgages, $63,867; United States stocks, $1,114,400; New York state stocks, $9,900; cash, $21,491.43. Total, $1,214,658.43. The net increase in securities during the year was $88,391. The superintendent recommends that private bankers should be forbidden to advertise under or assume corporate names, and that regularly organized banks should be protected in the additional credit which organization under and compliance with the law insures. This is suggested, apparently, by the fact that under the present state of the usury law private bankers are on a par with state and national banks. On July 1, 1882, the New York savings banks and trust companies held $116,036,560—one-ninth of the 4½ per cent. government bonds maturing in 1891, the currency 6s maturing in 1895-9, and 4s maturing in 1907. These will be held until maturity. The extent to which they are similarly held by trust companies and savings banks of other states and invested in trust funds, the superintendent thinks, is a guarantee that the present high premiums of government bonds will, in the absence of unlooked-for complications, be gradually increased.

OCCASIONAL NOTES.

It appears that, contrary to fears entertained on account of the special conditions of the climate, the spreading of the phylloxera is much less rapid in Spain than in France. This slow progress of the disease, especially in central Spain, is attributed in part to the compact rooting of the vines, in part to their high degree of vitality, and also in some degree to the fact that the continuity of vine plantations, which assists the ravages of the pest in France, does not exist in Spain. The inroads of the phylloxera by subterranean invasions are said to be slow, destroying the vines without spreading much. Of the swarms of the winged insect many are blown upon localities where no vines exist, and are thus lost for want of their usual food. There is no doubt, however, that the insect follows up its food, and with such destructive effect that in many parts villages have lost their plantations entirely. Concerning the remedies applied, a Spanish journal reports that the use of sulphate of carbon has at least alleviated the disease to such an extent as to render a judgment upon the efficacy of that substance possible, and also expresses the hope that, by perseverance in the application of it, the insect may be got rid of altogether. A similar conclusion in regard to the vines in Portugal is reached by Messrs. Southard & Co., who say, in their monthly circular (extracts from which are printed in the *Wine and Spirit News*) that although the effects of the phylloxera are likely to be increasingly felt for some years to come, yet the disease will doubtless be ultimately conquered. The native proprietors, it is said, have, with some notable exceptions, abandoned hope, and many previously prosperous small farmers are now earning a living as common laborers. The English proprietors, however, are fighting the malady with characteristic energy, and are assisted to some extent by the Portuguese government.

According to the annual report of the Commissioner of Mineral Statistics in Michigan, the copper product of the Lake Superior mines in 1880 was 51,091,188 pounds. The same report estimates the world's production of copper as follows: Chili and Peru, 34,000 tons; United States, 25,500 tons; Australia, 14,500 tons; Russia, 5,600 tons; England, 5,200 tons, and all other countries 19,000 tons, making an aggregate of 103,800 tons. It appears that the copper product of Michigan increased, in the decade following 1870, 116 per cent. in weight and 70 per cent. in value. During the same period the number of employés increased 13 per cent. and the capital employed increased 303 per cent. The increased use of machinery-power drills and the like, and the improvement in explosives, have resulted in facilitating the work of production to such a degree that the same labor which in 1870 produced 4,387 pounds of copper now produces 8,344 pounds. The production of salt increased from 560,818 barrels in 1869 to 2,750,299 in 1881; in fact it has nearly quintupled. The price per barrel, however, has fallen from $1.58 in 1869 to 85 cents in 1881. The report contains a description of the gypsum quarries in the state, which, though limited to a few localities, are said to be of sufficient extent and accessibility to suffice for all the demands that may be made upon them for the future. Numerous sandstone quarries have been opened in Jackson county, and the product of some of these is said to be first-class building stone. Clay of excellent quality is also found in the same locality. It is reported to be unlimited in quantity and unsurpassed as a material for the manufacture of sewer-pipes and fire-brick.

Certain representatives of the lead industry of Leadville, Col., have addressed to Congress a protest against the reduction of the tariff on lead and lead ores. They say that until the tariff on lead ores was threatened with a reduction the price of lead was $100 a ton, and that at that rate the Leadville smelter could pay $40 a ton for the lead in the ore; the remaining $60 being consumed in loss in treating, freight, refining, commissions, etc. With the present tariff of 2c. per pound on lead, equivalent to $40 a ton, lead, it is said, cannot be imported at a profit; with the tariff reduced to 1½c. per pound, or $30 per ton, lead, it is claimed, could be imported and sold at a profit at a slight advance on $90 a ton. The reduction of the tariff by ½c. per pound would, the petitioners say, reduce the demand for labor and supplies to two-thirds of what it is at present, and the loss on this account, together with that of the miner's and smelter's, would amount to $2,840,000 per annum. In addition to this, say the petitioners, the concentration of ores which can be carried on successfully with the present tariff, would have to be abandoned. The address deprecates the disturbances of the lead market which are likely to be brought about by the machinations of the foreign producer. The latter, upon the admission of foreign lead under a reduced tariff, would "agitate further reductions of the tariff and thereby keep the lead market in a state of fever that would check and eventually destroy home production."

According to recent advices from Colorado the bullion output of Leadville for the year 1882 was the largest in the history of the camp. A special dispatch to the Denver *Republican* estimates the total value of the output for the year at $17,127,402, of which $8,237,252 is credited to silver, $320,257 to gold and $4,296,066 to ore. The estimates are said to be based on actual figures taken from the books of the smelting companies. The *Evening Chronicle*, on the same basis, estimates the value of the total output at over a million dollars more than the *Republican's* figures. The difference in the calculations arises in estimating the "ore on hand" and "other shipments." These, according to the *Chronicle*, are the only items into which the element of estimate enters at all, and on these it claims that its figures are based on reliable data and are conservative.

In the December number of the *International Review* Mr. W. R. Balch deals with "The Police Problem." He declares the policeman to be the most conspicuous failure of American civilization, and proposes as the solution of the problem the formation and operation in every large newspaper office of a Bureau of Criminal Investigation, which would consist of enterprising journalists who would be sworn in as special officers without pay but with authority to arrest. Florence Kelley, in the paper "Need our Workingwomen Despair?" makes another reply to the pessimistic article of C. W. Elliott on "Woman's Work and Wages" in the *North American Review* for August. Mr. Charles F. Thwing opposes the foundation of "A National University." Mr. John Roach contributes a long article in which he essays to prove that the American theory of protection had nothing to do with the decline of American shipping; that but for that protection we would be still worse off than we are, and that the decline was due, in the first place, to the failure of the United States to meet Great Britain in her policy to aid and upbuild her shipping interest and drive us off the sea, and, in the second place, to the absence in the case of the American ships engaged in the foreign trade of the protection which our earlier statesmen gave in order to enable us to meet our foreign rival. In "A Picture of Northwestern Development" Mr. Charles K. Backus gives a description of the natural resources of Michigan. Mr. Roger Foster, in a clever paper on "Extra-Territorial Taxation," says that the great problem that the people of the United States will soon be obliged to solve is how to increase the local and diminish the national taxation with as little diminution as possible to the wealth of the country. Mr. William Brackett discusses the evils of "Partyism and Party Spirit," and discovers some hopeful signs that the worst excesses of the spirit of party will before long disappear.

The *Mexican Financier*, in discussing the proposed world's cotton centennial exposition, intended to be held in some city of the United States in 1884, says that the project affords Mexico an opportunity such as is seldom offered. It adds that there is scarcely a state in the republic in which there are not large tracts of land adapted to cotton culture, and that Mexican cotton is known abroad as being particularly fine in color and of an extremely soft and silky fiber, which renders it suitable for fine machinery. The *Financier* believes that with ordinary effort Mexico, instead of importing her raw cotton, as at present, at enormous expense, could readily become a large exporter. Native growers, it continues, should show their confidence in this matter and should take immediate steps to give practical demonstration of its feasibility. They should first help themselves, and then it would be a question of only a short time when foreign capital would be abundantly offered to increase and facilitate the production.

SPECIAL CORRESPONDENCE.

THE LONDON STOCK EXCHANGE IN 1882.

London, December 21.—Stock-brokers as well as merchants and manufacturers appear to be rather disheartened with the results of 1882. That they have transacted a smaller business than in 1881 the returns of the London Bankers' Clearing House go far to prove:

CLEARINGS ON SETTLING DAYS—FIRST ELEVEN MONTHS.	
1881	£1,214,251,000
1882	1,140,388,000
Less in 1882	£73,863,000

In reality, the loss of business has been more than here indicated, for the exceptionally violent fluctuations at certain periods of this year have caused differences out of the usual proportion to the current volume of business. Thus the heaviest bankers' clearings were in January and February, at the time of the crisis in Paris, and at the end of June, when the riot in Alexandria and the virtual imprisonment of the Khedive by Arabi, suddenly opened the eyes of speculators to the fact that war was inevitable. At that time, too, the House had committed itself extensively to a rise in prices, and had taken up the electric light and power companies, then flooding the market, with unusual ardor. For this reason the settlement at the close of June involved a very lengthy list of members who were unable to meet their engagements. Since then it has been found impossible to instill any life into the Stock Exchange. There is, of course, the usual routine of buying and selling on behalf of investors, but the genuine speculations in which the House so delights have been conspicuously absent. To stock-brokers, therefore, and stock-jobbers the year has certainly not been a very profitable one.

Investors, on the other hand, cannot, all things considered, be held to have done badly. The absence of support from Paris was naturally a drawback to the quotations of "international stocks," as those securities which pass freely between London, Paris, Berlin and Vienna are termed here; and there has also been an extended distrust of United States railroad stocks, coupled with a serious loss upon many of the more recent importations, like Denver & Rio Grande and Louisville & Nashville. Then, again, the trade advices from the provinces are very far from encouraging, and the year is closing with a considerable number of failures in South Wales, Liverpool and other parts of the country. The price of silver has also dropped sharply on account of the increased supplies, the expected large council drawings on India, and the absence of all inquiry for silver and Mexican dollars from the East. All this has told against prices in the Stock Exchange, and the condition of affairs has been aggravated by dearer money and weak bank returns. But in spite of all this there are numerous instances of securities, in which investors here are largely interested, showing a decided improvement upon the twelve months. Preëminent among them all stands Mexican Railway stock, which, opening the year at 20 per cent. discount, is now at 35 per cent. premium, an advance of no less than 55 per cent., and that in a security which three or four years ago was regarded by the market as almost hopelessly bankrupt. So much was this the case that in 1879 this stock was selling at nearly 95 per cent. discount. But there are other instances in which a large rise has occurred. Thus, Canadian railways, unlike those across the border, have advanced to an important extent, a rise which may be explained, first, by the amalgamation of the Grand Trunk and Great Western companies of Canada; secondly, by the steady growth of traffic in the latter half of the year; and, thirdly, by the extensive land speculations and railway extensions westward, which, it is held, will largely benefit the existing lines by feeding them with through traffic. There has also been a rise in South American railroad stocks, which have found almost their entire support in the London market. And Indian railways have likewise fared very well, though they were higher a month or two back than they are now. Banking companies, from the Bank of England downward, have derived very large profits from the higher value of money, and many of them have distributed larger dividends. It is not unnatural, therefore, to find that, in the majority of instances, a rise has to be recorded; and the same remarks apply to the Australian as well as to the London and a large section of the provincial banks. One curious feature has been the advance in gas companies, and that in the face of the electric-light rage. But it has been found that the gas companies have, in spite of that mania, been so far doing a steadily-increasing business, and appear, as yet at any rate, to have little to fear from the "light of the future." It is even said that some of the

134113

electric concerns are very good customers of the gas companies.

But all this time we have been dealing with what cannot be regarded as the securities of first importance to the British investor. Nothing has been said concerning his holdings of British and colonial government stocks, nor yet of foreign stocks or home railways. In the home funds the country has embarked some £750,000,000, and here a rise of about 1 per cent. is to be recorded. Indian and colonial government paper represents some £250,000,000 more, and of these securities it may be said that market prices are almost precisely similar to what they were twelve months back. Home railway securities stand for another £750,000,000, and amongst these, although the movements are generally irregular, they are not in the end of much consequence, except as regards a fall in the prices of three of the passenger lines, and the rise in the Irish companies and Great Western stock. As to the volume of British holdings in foreign government stocks it is very hard to speak with any approach to accuracy. But Mr. Nash, in his "Enquiry into the Profitable Nature of our Investments," placed the total at £700,000,000 nominal; and here, though there are some few instances in which a rise has occurred—United States bonds being an instance in point—the chief movements are downward, and include a drop of about 5 per cent. in Russian, and a nearly similar movement in French 3 per cent. rentes and Hungarian bonds. But, it will be asked, how about Egyptian stocks, which on half a dozen occasions have fluctuated 5 or 6 per cent. in the course of a single day? Practically there is no change whatever for the year in Egyptian securities, so that all the doubts and fears of the past twelve months may be considered to have gone for nothing. There is at present no trace of them to be seen, though, were once a British protectorate to be established over that country, there can be no doubt what would be the effect on Egyptian stocks. At present the Stock Exchange is wholly in a fog as to what the government intend doing with that country. It is a question whether they are themselves any better enlightened upon the subject, the cabinet being credited with entertaining a wide divergence of views upon the subject. Turkish stocks have fared badly during 1882 in the face of the settlement recently effected with the bondholders. But then the condition of affairs at the Porte appears hopeless, pointing more and more strongly to the dismemberment of a country which, in many parts of it, is now little more than a geographical expression.

For the rest, there is not much that is favorable to be said. Mines and the other odds and ends of investment present us with a very sorry record, and as for the Indian gold mines, there is hardly any one left who believes in them. It has been the old story of the vendors making their thousands and the shareholders losing them. The fall in the prices of all descriptions of metals naturally affects a large number of English and Scottish companies, and the fall has unmistakably extended to the iron companies. Strange to say, in the face of the activity in the building of iron steamships the steamship companies have materially deteriorated. Yet the steamship companies did a handsome stroke of business over the Egyptian expedition. Such is a brief summary of the fluctuations in the stock markets here during the past twelve months, and you may ask whether the balance of these changes may be regarded as upward or downward on the twelve months. But I do not believe that a satisfactory answer can be given to the question. I should say that, as a whole, we are very much as we were, the losses and the gains cancelling each other.

BANKING AT ST. LOUIS.

St. Louis, January 1.—There are twenty-four banks in St. Louis, and their paid-up capitals aggregate $8,990,000. Their surpluses range from a few thousand dollars to over a million and a half. They have just closed an unmistakably prosperous year's business. The commerce of St. Louis during 1882 was really too large to be conveniently accommodated by the banking capital with which the year was commenced. BRADSTREET'S pointed out this fact several months ago. Although no new banks have been established here during the twelve months last past, there have been quite material increases of capital, and they were very timely, but it is a current confession that they were insufficient to fully meet the requirements of legitimate business. So thoroughly is this appreciated that arrangements are now being perfected for starting an additional banking institution of very respectable capital.

Such inadequacy of capital to meet the regular demands for bank accommodation naturally tended to secure the highest profit on the funds employed and to render the business prosperous. To keep their money busy banks did not need to carry anything outside of the choicest "offerings," and often the acceptance of some of these was delayed through lack of funds. And the handling of grain, live-stock and, part of the time, cotton, has been cramped because loans could not be effected at easy rates.

Through most of the year 8 per cent. has been the ruling rate of interest on bank loans. Occasionally prime paper has been received at 7 per cent. It is doubtful whether any other year's banking business in St. Louis has been of such a safe character, and, at the same time, so remunerative. General solvency has prevailed among our banks' customers, and losses on account of failures have been trifling.

The greatest tension was felt by the banks early in the year. It arose from the grain and cotton interests, and was caused by speculation, which crowded this market with an enormous accumulation of these staples awaiting the most auspicious opportunities for sale. About the close of last February there was not far from $4,500,000 worth of cotton alone here belonging to southern planters and dealers, upon which St. Louis cotton factors had made large advances. So stringently did this press upon the money market that other interests began to suffer, and for a time the banks were compelled to force the sale of cotton and grain as the safest and promptest way to arrive at relief.

During the summer and part of the spring New York exchange quite uniformly commanded a premium here, but the last three or four months of the year the shipments of live stock, provisions, grain and cotton brought the rates down to at least par, and during most of that period below par.

Our bank clearings for 1882 were $863,129,287, against $832,631,830 in 1881. The balances in 1882 were $138,484,976, against $126,805,227 during the previous year.

The money employed in the banking business of St. Louis is local capital almost exclusively. But a vast amount of outside capital finds desirable investment here in what may be termed uncommercial or long loans, as well as in various stocks. Last year there was loaned on St. Louis real estate, for long terms as a rule, $9,720,000. Our money brokers handled much more that went to country applicants.

There has been a constant and steady demand for good bonded securities at 5 and 6 per cent. This is partly owing to the very cautious policy of most of our banks in declining to pay any interest on time deposits. A few do pay a small rate.

Considering the recent and prospective increases of banking capital here the outlook is that throughout 1883 St. Louis trade will have plenty of money, at reasonable rates, for its legitimate needs.

LETTERS TO THE EDITOR.

FLOURING MILL EXPLOSIONS.

To the Editor of BRADSTREET'S.

SIR—Some quarter of a century ago, if one had been required to name the safer and more uniform of our staple industries, the business of flour milling would unhesitatingly have been included in the enumeration. The occupation of the miller was indispensable. As it was then considered free from danger, and beyond the possibility of the careless workman getting entangled in the somewhat simple machinery, or from breathing more flour into his lungs than he conveyed to his stomach, milling was among the trades that carried the least risk to life or property. But as civilization moves science makes herself felt; new processes are introduced into this most ancient of useful arts, new machinery follows as a necessity, and new machinery brings unlooked-for dangers. To-day the insurance risk on a flouring mill stands higher, in some respects, than a dynamite factory, or perhaps a gunpowder magazine. Statistics warrant this statement.

On the evening of May 2, 1878, the extraordinary danger and unlooked-for properties of flour became apparent to the intelligent world in the explosion of three of the largest mills at Minneapolis, Minn. This, however, was by no means the first warning that science had given of the dangers that were being fostered in new and improved mill machinery. The Tradeston Mills, at Glasgow, Scotland, had, in 1872, been entirely destroyed in a somewhat similar manner; but, in the former case, explosion following explosion demonstrated the fact that there was a new, an active and potent agency, no longer to remain unnoticed, but unquestionably locked up in the simple wheat-berry. Subsequent investigation, of a character purely scientific and unbiased, established the fact that, under certain conditions, flour rendered fine, more particularly by the improved processes of milling, and under certain other conditions, might become highly combustible—nay, even, in the fullest sense of the term, explosive. Other organic dusts, many of them generated in the manufacture of flour, it has been found, possess like properties.

Experiments made and recorded by eminent scientists, amongst whom may be quoted Professors Peck and Peckham, of Minnesota, go to show that one of the essential conditions to make flour or other organic dust explosive is the admixture of a large but definite amount of air, and dryness in the quality of the dust. It is apparent to the practical mechanic that a damp combustible body is difficult of ignition at all times and in all states of division, and, although combustion may be induced in such bodies, the process of disintegration is retarded or even prevented altogether. A sufficiency of oxygen, or air containing such, is one of the essentials in all forms of combustion.

Now why some mills, like those of Minneapolis, of Glasgow, and others, should explode from flour alone, and some, as in almost daily occurrence, simply burn with rapidity, is a question that becomes of great commercial importance. Assuming that there are laws governing the time of combustion of organic dust, then by their proper observance the burning of a mill might be so preconditioned that, when it occurs, it would be slow enough in its character to admit of the proper means being applied for arresting its progress. In such a case property might be saved; in case of non-observance total destruction is inevitable.

To determine more particularly this problem, the writer tendered, in a paper read before the Fire Underwriters of the Northwest, at their last meeting in Chicago, observations and researches as a solution. The conclusions arrived at showed that the dangerous element was more particularly resident in the dry air continuously mixing with fine dust, and that a dry atmosphere could exist naturally from climate, season or other natural cause, or become abnormal in portions of mills from the nature of its processes and construction. It was shown from observation that the air in dust-spouts and dust-rooms contained as much as 25 per cent. less humidity than the surrounding atmosphere in some instances, and, coupled with this fact, that the majority of mill fires originated in these very localities. Official records were obtained of the conditions of the external atmosphere at the time of Minneapolis and other mill fires. What the internal records would have shown in the case of the Minneapolis explosion must for ever remain a mystery.

Fortunately for the cause of science, observations were being made in a mill, one of the best modern type and situated in Louisville, Ky, immediately preceding its partial destruction by fire. The results obtained showed a marked absence of humidity in the "dust rooms" over any other parts of the mill or the external atmosphere, and we may reasonably infer that other mills would give similar results. It was in the vicinity of one of the dust rooms that the fire originated. Add now to this record that the external atmosphere at the time of the conflagration contained only 63 per cent. of moisture, and we have a complete history of this fire.

On July 31, 1882, a destructive fire occurred in New York, by which the "Hecker Mill" was totally destroyed. The narrative states that, so rapid was the spread of the flames, the workmen had to run to save their lives. The humidity of the external atmosphere, registered at the time of the fire, gave 48 per cent. of moisture. The internal conditions are unknown.

Lastly, during the time of the memorable explosions of Minneapolis, the outer air showed 38 per cent. of humidity, and had been as low as 34 per cent. during the day. Inference as to the condition of the inner atmosphere, after a busy day's work, heated artificially, and its circulation confined by closed windows, all of which are established facts, leads us to assume that its dryness was in a degree beyond precedent, as the catastrophe was then beyond explanation.

Here are three instances of fires that may have been influenced directly in their progress by external atmospheric conditions: first, an ordinary conflagration, yet destructive; second, a rapid process of combustion, and, lastly, instantaneous explosion. The degrees of moisture of the air in each instance, at the times of the incidents, show a conspicuous correspondence.

We naturally ask why this explosive character of milling dusts has but recently developed? There are, perhaps, several reasons that could be given, but the one of importance refers to a comparatively new process that has recently been introduced by millers to make a better quality of flour. In the old method of grinding, the grain was introduced by hoppers to the horizontal surfaces of two "millstones," the upper one of which revolved and ground the grain against the lower or bed-stone. This mode of grinding is so well known as to need no further description. The product was then bolted or sifted to separate the flour from the bran. In the new process, designated as "gradual reduction," much smaller roller mills are employed, not unlike the mills used for rolling metal, and the grain is passed through a series of these so graduated that it is crushed or broken up gradually, each mill taking the results from that preceding it and grinding or cutting smaller until an exceedingly fine material is obtained. By subsequent admixtures any quality of flour is thereby produced. It is a fact, patent on the face, that more dust is thus generated and, under the microscope, while the starch of the old process is in masses and crystal-like in character, that of the gradual reduction system is granular and considerably finer in quality. Here then is fuel for explosion accounted for.

We now come to the main question before the commercial world, and the one that must sooner or later be determined. Periodically every few days the telegraph brings us records of terrific mill fires; the results show enormous destruction of property and frequently sacrifice of life. The mill-owner finds himself suddenly in the presence of an all-powerful enemy engendered by his modern improvements. He cannot go back to the more primitive forms of machinery, in which dusts were of a lesser dangerous character; nor, on the other hand, is he able to carry fire risks unaided by insurance underwriters. Commerce cannot afford to leave him in this dilemma, nor is science unmindful of his requirements. Something must be done quickly, and that something of a radical character. From what we know now of the nature of explosive dusts as a dangerous element, they should be conveyed in fire-resisting channels as quickly as possible outside of the mill. The atmosphere of a dust-charged mill should be regarded as a gas-impregnated mine, and safety lamps employed as a source of artificial illumination. When a dry atmosphere is constantly in course of generation, artificial humidity, not by any means approaching dew point, should be introduced and lastly, mill buildings should no longer be erected like tinder boxes, ready to burn, but substantially of brick and stone, with good ventilation, emulating rather a magazine for protection from fire and explosion of a dangerous body, which, unquestionably, under certain conditions, flour is liable to become. These are a few of the fundamental and no doubt most important conditions that the mill of the future must embody after the mill of the past has been destroyed by fire or explosion.

THOS. W. TOBIN.

Louisville, December 18.

REVIEWS.

*THE STATE IN RELATION TO LABOR.**

A demand for popular manuals of political knowledge, similar to that which we have remarked upon as growing in the United States, seems to be felt also in England. It is to meet this demand in part that the Macmillans have projected their series of handy volumes on the rights and responsibilities of the English citizen. In this series the structure and ordinary functions of the English governmental system are treated in sufficient detail to place the ordinary citizen in possession of the main points of the subject. Comprehensive views are thus presented of the mode of operation of the political machinery, both general and local, and of the relations of the state to some of the great interests with which it deals, such as labor, trade, education, the land and the church. A peculiar interest attaches to the volume in which the relations of the state to labor were discussed by the lamented Professor Jevons, not only because of the reputation of the writer and the importance of his subject, but also because this little treatise contains the results of his last labors.

The standpoint of Professor Jevons, in regard to his main subject, is sufficiently indicated in his preface, in which he says that, while much has been written about labor and capital, yet there is needed a careful attempt to understand the principles of legislation which emerge when the action of the legislature and the state of public opinion with reference to the conflict of labor and capital and the regulation of industry are analysed. The all-important point, he continues, is to explain why in general the rule of *laisser faire* is upheld, and yet in large classes of

* The State in Relation to Labor. By W. Stanley Jevons, LL.D., F.R.S. London: Macmillan & Co., 1882.

cases the interference of local or central authorities is invoked. The outcome of the inquiry is that no hard and fast rules can be laid down, but that every case must be treated in detail upon its merits. Specific experience is the best guide, but the real difficulty often consists in the interpretation of experience. Some idea of the spirit in which he deals with labor combinations may be gained from his remark that all classes of society are trades-unionists at heart, differing chiefly in the boldness, ability and secrecy with which they push their respective interests, and that the economic errors of trades unions are, after all, not worse than those which pervaded the commercial, if not the governing, classes a generation or two ago.

The grounds upon which the interference of the state in industrial concerns proceeds are illustrated by the author by reference to the case of a piece of revolving machinery in a factory, which is likely to cause injury to persons carelessly approaching it. Here is an existing palpable evil to be in some way averted. It may be said that the individual workman is bound to take care of himself and to avoid negligence such as would lead to injury. As a matter of fact, however, thousands of persons, from negligence or other causes, are seriously injured or even killed by unfenced machinery. When a simple fence will remove all danger, such a fence should be put up. The question now arises, who should put up the fence, and who should see that it is put up? It might be assumed, perhaps, that the owner of the machinery would fence it from motives of humanity or self-interest. But experience proves the existence of unaccountable thoughtlessness, if not heartlessness, and documentary evidence exists to show that in some instances legislation on the subject was opposed by property-owners. The idea should therefore be in some way suggested to the owners of dangerous machinery. But in what way? Can the men employed in the factory be trusted to insist on proper fences being put up, or shall the humane public be charged with the duty, or shall the legislature be asked to declare negligence in this regard criminal, or shall the indirect action of judges and juries in awarding heavy damages be resorted to in order to compel carefulness? These are for the most part unreliable remedies. There remains the simple and effective remedy of commanding by law that dangerous machinery be fenced, and appointing inspectors to prosecute owners disobeying the law.

The decision of questions such as the above involves the point whether out of respect to some supposed principle of individual liberty the state ought to allow men to go on working and living in the midst of needless risks. And here Professor Jevons takes very strong ground. In dealing with the subject, he says our "first step must be to rid our minds of the idea that there are any such things in social matters as abstract rights, absolute principles, indefeasible laws, inalterable rules, or anything whatever of an eternal or inflexible nature." Certain absolute rights are supposed to be guaranteed by the law, but, as our author suggests, a cursory examination of the statute book would show that these absolute rights, so called, have been invaded in every conceivable way. The celebrated "liberty of the subject" he dismisses as "a metaphysical entity;" such liberty, at best, "is but the means toward an end; it is not itself the end; hence, when it fails to produce the desired end, it may be set aside and other means employed." The author owns that if the existence in social affairs of any indefeasible right or absolute principle were to be recognized none would seem more sacred than the principle of freedom, but he adds that so intricate are the ways, industrial, sanitary or political, in which one class or section of the people affect other classes or sections that there is hardly any limit to the interference of the legislator. Such legislation as is adopted, however, should, in the author's opinion, proceed upon the ground of experience. Before the passage of any great law involving the whole of an extensive trade or class in some irrevocable and costly change experiments should be tried, and the most direct and pertinent evidence concerning the probable result obtained. The author shows that in many instances it is possible for the legislature to resort to direct experiment, and he instances a few great laws—notably the Poor Law Reform of 1834—which were based upon inquiries of an empirical character, leaving little to be desired on the score of care and completeness. Of course, it is implied in the recommendation to pursue an experimental course in legislation that the experiments must be made in the particular way calculated to prove or disprove the conclusion in view.

The author recognizes that the manner, occasion and degree in which the state may interfere with the industrial freedom of its citizens is one of the most debatable and difficult questions of social science. The subject would be comparatively simple were the direct relations of the state to individuals only in question. In reality, however, the most difficult questions arise from the relations of the state to aggregations and organizations of individuals, and there is involved not so much the direct restraint of the laborer by the state as the supervision by the state of the voluntary and unauthorized legislation of the laborers themselves. From a review of the English statutes dealing directly with labor and the laboring classes the author arrives at the conclusion that such legislation has been almost always class legislation, the effort of some dominant body to keep down a lower class which had begun to show inconvenient aspirations. Such was the great Statute of Apprentices (5 Eliz., cap. 4), which is thought to signalize the triumph of the craft-guilds or medieval trades-unions. In some cases, of which one notable instance is given, unenlightened self-interest defeated its own ends, and statutes passed at the instance of particular trades for their supposed advantage worked so badly that they were afterwards repealed at the suit of the artificers for whose benefit they were supposed to have been provided. One instance of direct interference of the state with industry which has been much discussed, and with no great degree of discrimination, is government inspection of commodities. It will be allowed that in many cases, especially in regard to points affecting the health of the individual, an expert is a far better judge than the individual himself can be. In such cases, as the author points out, a government officer who steps in and prevents an adulterated or diseased article from being exposed to sale does not really restrict the liberty of the purchaser. That such interference has been beneficial to the public in the past is abundantly proven by the returns, among others, of the analysts charged with the duty of detecting and exposing food adulteration, from which it appears that, in consequence of the activity of the inspectors, the practice of adulteration is on the decline.

The author reviews the history of the most important mass of legislative enactments relating to labor in England—that contained in the Factory acts consolidated in 1878 into the statute known as the Factory and Workshop act. We have not space to notice in detail the steps which led up to the present state of the law, nor to follow Professor Jevons in his discussion upon the restrictions on juvenile and female labor contained in the act mentioned; for these we must refer the reader to this very instructive volume.

The author approaches the most difficult part of his subject when he proceeds to deal with the relations of the state to trades unions or other confederations of the industrial classes. Common trade interest, as he observes, is one of the strongest bonds of society and one of the most considerable factors in social affairs. It leads to the creation of organizations aiming to control the course not only of their own members, but also of all whose actions touch the trade interest—assuming, in other words, a certain right of government. It is, of course, highly important to determine how such bodies shall be treated by the state; it is also exceedingly difficult, since, as Professor Jevons points out, the control of the individual by the state involves the control of his control over other individuals. Trade societies he finds to be of great antiquity, such bodies having existed among the ancient Hebrews and Romans. The first origin of modern trade societies he traces to the guilds of the Teutonic tribes. The original plan of the modern trades unions, strictly so called, he finds in a pamphlet published in London in 1776. Societies appear to have been formed upon the model proposed in this pamphlet, but their history, until within a very recent period, was troublous and discouraging. In the latter part of the last century and the early part of the present many repressive laws aiming at the overthrow of the various trade combinations were passed. These laws failed to effect their object. After a time the conviction of their impolicy impressed itself upon Parliament and these mistaken laws were finally swept away. The later history of trades unions and of legislation since the meeting of the first trades-union congress in 1866 has already been given in detail in BRADSTREET'S.

Concerning the relative good and evil of strikes, Professor Jevons is not very decided in his expressions of opinion. He admits that on a superficial view the recurrence of strikes might be taken as an evidence of their success, since it is hardly to be supposed that workmen would venture on new strikes unless they were satisfied that advantage had been derived from previous strikes, and he does not doubt that in certain particular instances strikers have succeeded in gaining what they demanded, and even that other workmen of the same trade have profited from a corresponding rise of wages conceded in consequence from their employers. He concedes also that the wages of workmen have been greatly advanced since they acquired the right of striking at discretion. But he thinks it a mistake to argue that the strikes are the cause of attainment. He points out that the rapid progress of mechanical invention has greatly increased production; that the capital of employers has grown vastly; that great changes have taken place in the purchasing power of money, and that the general rise of wages admitted to have occurred is by no means confined to trades which are united and addicted to striking, but extends, more or less, to all classes of employés. In special states of trades, particularly where there are violent oscillations of activity and depression, it is not improbable that a power of combination may temporarily secure to the laborers higher wages; but, on the whole, the author concludes that the economist incurs grave responsibility in expressing approval of any strikes.

In relation to the laws against industrial conspiracies, so called, that is laws imposing penalties upon persons conspiring to upset or obstruct the ordinary arrangements of trade, the author is of opinion that it is impossible to accede to the demands sometimes made by unionists for their repeal. As he very truly says, a great city "might be reduced to starvation and anarchy by a well-devised combination of a few thousands of men," and this danger becomes more and more possible in proportion as the organization of society becomes more complex. He believes that the soundest possible solution of the labor question will be found in a system of industrial partnership under which the weekly wages would be regarded merely as subsistence money, or advances made by the employer to the laborer and his family, to tide over the interval between manufacture and sale, and the balance of the value produced would be paid at the end of the year or half-year in the form of a dividend or bonus consisting of a share of the surplus profits realized over and above the necessary expenses of production. The practicability of this system appears to be no longer open to doubt. In France, especially, it has surely and, of late, rapidly grown in favor, and several large enterprises are conducted there upon the principle set forth above. The systems of arbitration and conciliation are regarded by Professor Jevons as affording no permanent settlement of the relations of employers and workmen. In his opinion they should be considered as only forming stepping stones to a sounder method of partnerships and participation in profits, such as that referred to above.

---

*A HISTORY OF PAPER.**

In opposition to views previously entertained, the opinion has been gaining ground for many years that, in the immense development of the means of communicating and diffusing intelligence, the invention of a cheap and convenient medium for receiving impressions has been by far the most important factor. A little reflection will render apparent the justice of this view. The essential principle of the modern invention of movable types had been employed in many instances by nations whose history lies in a now remote antiquity. Among other instances may be mentioned the use of seals by the Egyptians, Greeks and Romans, the printing of long histories on the bricks of Babylon and Nineveh, the impressions in the latter case being embossed by molds instead of being colored by ink, and the custom of stamping figures and hieroglyphics upon bands of leather by means of heated metal brands, which was practiced to some extent among the Egyptians. On the other hand, the want of a cheap and easily-procurable material for receiving inscriptions was so great that in many cases some of the choicest classics were erased from the parchment rolls on which they were written, and, thus prepared, the rolls were made to do service a second time. From the point of view indicated, even if the present commercial importance of paper as a commodity were excluded from consideration, the monograph before us could not be otherwise than interesting.

The facts noted above are referred to by Mr. Smith, but he expresses the opinion that it does not of necessity follow that the non-existence of such a paper as we now possess was the prime or chief cause which delayed the invention of printing for so many centuries, and he points out that the prepared papyrus of the Egyptians was even more strictly a true paper than the molded bricks of Babylon and Nineveh were samples of true printing. It is natural to suppose, as the author suggests, that the first purpose for which a substitute for paper was required was the transmission of simple messages. For this purpose any tolerably smooth and light substance capable of receiving impressions would suffice, and we find that the smooth bark and leaves of certain trees, sheets of metal or ivory, leather, painted cloth, etc., were in use in different countries. An approach to the modern practice of binding sheets in books is found in the custom of stringing leaves on threads for preservation, and in that, of which examples have been found among the Aztec remains, of folding up the sheets after the fashion of a screen and affixing a tablet of wood at each extremity.

The greatest amount of interest naturally attaches to the two materials which chiefly supplied the place of paper among the civilized nations of antiquity, namely, papyrus and parchment. These two articles were at one time important staples in the commerce of the world, and of the former it seems Egypt had a monopoly. In the days of Egypt's prosperity this plant grew there abundantly, and was employed for a variety of purposes, part of it being used as an edible, part for cordage and other purposes, and the rest for paper manufacture. The manufactured papyrus was of nine distinct qualities, determined chiefly by the choice of the raw material. In the process of manufacture it seems neither machinery nor any intelligent application of chemical science had any part; it was merely a mechanical preparation of a substance adapted by nature to the purpose for which it was to be used. The width of the sheet was determined partly by convenience, and partly by the length of the leaf used. It must have been limited, judged according to modern standards, the specimens which have been found varying from five to eighteen inches in breadth. The length, it appears, might be indefinitely prolonged by adding sheet to sheet, though no reason is apparent why the width could not be increased in the same way. The greatest length of any roll yet found is thirty feet. Mr. Smith states that papyrus was used as a writing material as early as 2400 B. C., and that specimens are still preserved fully 3,000 years old. He also mentions that the official papers of the popes were written upon this substance as late as the twelfth century. The height of its importance as an article of manufacture and commerce was reached after the Christian era, though, as might be expected from what has preceded, the supply was always less than the demand. The author regards papyrus as a true paper, although it differs widely in many respects from the paper of to-day. Next to the prepared papyrus, parchment was the material most used by the ancients in the place of paper. It was invented later and has had a much longer continuance, being used to some extent even at this day.

But whatever may be the view taken as to the degree in which papyrus and parchment supplied the place of paper, it is certain, according to our author, that the great revolution in the fundamental principles of the manufacture took place when paper was first made of rags, or other vegetable fiber, reduced to a pulp and gathered into sheets. The date of the invention of this process is somewhat uncertain, varying in the estimates of different historians over three hundred years. According to the earliest estimate it is fixed in the reign of the Chinese emperor Wan-to, between 179 and 156 B. C.; the latest gives the date at about 200 A. D. The author is of the opinion that the Chinese are entitled to the honor of the invention, and states that at least since the date last given, four different kinds of paper have been made in China. The new art of making paper spread from China throughout Central Asia, and was found by the Saracens in Bukhara about 704 A. D. The material used in the manufacture at Bukhara appears to have been cotton. At the time of their conquests in Spain the Saracens introduced the manufacture of paper, in which at first they were compelled to use flax, but afterward resumed the use of cotton. The Saracens made use of raw cotton and effected little improvement in the art. Their product, it seems, was yellow and brittle. This difficulty was remedied by certain Spaniards, who in 1085 A. D. substituted rags, and in 1151 A. D. made the further improvement of stamping rags, cotton, etc., into pulp by means of water-power.

Cotton paper was in general use about the close of the twelfth century, but appears to have been superseded in the fourteenth by paper made from hemp and linen rags. A mill for the manufacture of this paper was built at Nuremberg in 1390. In England, about a century later, mention is made of the manufacture of a superior paper of that kind in Hertfordshire. The progress of the manufacture in England was, however, very slow. It was not until early in the eighteenth century that the English paper

* A History of Paper. Its Genesis and Its Revelations. Prepared by J. E. A. Smith. Holyoke, Mass., U. S. A. Clark W. Bryan & Co., 1882.

manufacture entered upon a career in any way promising, and it was many years more before it acquired an equality with that of the continent of Europe. A considerable impetus was communicated to the manufacture by James Whatman, who, after having worked as a journeyman in some of the principal paper mills on the continent, established a superior manufacture at Maidstone in Kent, in 1770.

The paper manufacture was established in the American colonies at a comparatively early period. The first paper mill was erected by William Rettinghuysen (or Rittenhouse) in Roxborough, near Philadelphia, in 1690. A second was built twenty years later at Crefeld, now a part of Germantown, by a connection of the Rittenhouse family. In 1728 the third paper mill in Pennsylvania was built, and two years later the first paper mill in New England went into operation at Milton, Mass. This mill was discontinued after a few years from want of a skilled workman, but was revived in 1770. In 1768 the first paper mill was established at Norwich, in Connecticut. About this time there were in Pennsylvania, New Jersey and Delaware, then the chief seats of the paper manufacture, forty mills, whose product was valued at £100,000—probably colonial pounds, not pounds sterling. The supply of paper at this period was, however, entirely insufficient to meet the growing demand. In 1778 paper for making cartridges was so scarce that it was called for by proclamation on the occupation of the city of Philadelphia by the American army, and the town was searched for it with small result. In 1781 the public printer of New York was unable to obtain paper on which to print the journal of the Assembly.

Notwithstanding the great advances that had been made from primitive methods, paper making at the close of the last century was still a tedious, difficult and costly operation. The molding and finishing of each sheet was done by hand, and this required much time as well as more than ordinary care and skill on the part of the workmen. At length, in 1793, one Louis Robert invented a machine which made a continuous web of paper twenty-four inches wide. The machine, however, was imperfect, and the enlistment of capital to aid in making necessary improvements was impossible in the then distracted condition of France. After some delay and difficulty the sympathies of a wealthy firm of London stationers were enlisted in the scheme. Through their exertions, and that of a young machinist named Donkin, whom they employed to perfect the apparatus, it was gradually brought to a high degree of perfection, but not until most of those connected with the enterprise had been bankrupted. Meanwhile the machine itself had been growing in favor in England. In 1839 two hundred and eighty-four Foudrinier machines were working in Great Britain and Ireland, making daily in the aggregate sixteen hundred miles of paper from four to five feet wide. The price of paper was lowered fully fifty per cent. Continual improvements had been made on the Foudrinier machine since its invention, but, except in the British empire, it made its way slowly. In 1815 the first of these machines was made in France, the native country of its original inventor. In 1820 one of these machines was introduced into the United States for the first time. The first Foudrinier machine manufactured in Philadelphia was built, about 1830, at Windham, Conn. It is hardly necessary to add that the history of paper manufacture and of paper-making machinery during the last half century has been a record of continual improvement.

From some statistics collected by the author it appears that in 1810 the number of paper mills in the United States was estimated at 185, of which 60 were in Pennsylvania, 38 in Massachusetts, and 28 in New York; the remainder being scattered among the other states. These produced annually altogether 50,000 reams of news paper, valued at $3 per ream; 70,000 reams of book paper, valued at $3.50; 111,000 reams of writing paper, at $3, and 100,000 reams of wrapping paper, at 85c.—the total value of the product amounting, as will be seen, to $813,000. In 1870 there were in the United States, exclusive of paper-hanging manufactories, 668 establishments, mainly making printing, writing and wrapping paper, with a capital of $34,365,014, and products valued at $48,676,985. Of those, 117 in New York produced $10,301,563; 65 in Massachusetts, $6,661,886; 75 in Pennsylvania, $5,176,646; 43 in Ohio, $3,799,505, and 60 in Connecticut, $2,715,630. In September, 1882, the number of paper and pulp mills in the United States was 1,040. Since 1870, our author remarks, the expansion of the paper industry has been very great, especially in Massachusetts, in the four western counties of which the greatest seat of the paper manufacture in America is now found.

LEGAL NOTES.

A case deciding a point of considerable importance to business men is cited by the Albany *Law Journal* from advance sheets of the 58th volume of Maryland Reports. In this case, Drury vs. Young, it was held that a memorandum under the statute of frauds was sufficiently "signed" by the name being printed on a letter-head, the contract being underwritten. The court cited a Maryland case, to the effect that the place of the signature in the memorandum is immaterial, and extracted from the English authorities the doctrine that the name may as well be printed as written, if the printed name is adopted by the party to be charged, and hence concluded that there was a sufficient signing if the name were in print and in any part of the instrument, provided that the name was recognized and appropriated by the party to be his.

An interesting discussion of the legal rights of partners, or of persons agreeing to assume the partnership relation, as between themselves, is contained in the recent case of Hill vs. Palmer, decided by the Wisconsin Supreme Court on November 21, 1882. The court, per Lyon, J., stated the rule as between partners to be that if the damages resulting from a breach of a covenant or stipulation in the partnership agreement by one partner belong exclusively to the other partner, and can be assessed without taking an account of the partnership business, an action may be maintained by the injured partner against the other for such damages, although the court held to the old doctrine that one partner could not maintain an action at law against the other on account of strictly partnership transactions. As between persons who have agreed to form a partnership, the court held the doctrine to be well settled that an action at law may be maintained for the breach of an agreement to form a partnership or for a wrongful refusal by one party to such a contract to permit the firm to launch the business.

A case involving a nice point in trade-mark law, and one from which there is not wanting a trace of humor, was decided in the Canadian Court of Queen's Bench on November 20. In this case, Mackinnon vs. Thompson, the appellant, a biscuit-maker, sold his business to the respondent, "with the good-will and all advantages pertaining to his name and business." The appellant, it seems, had used a trade-mark on biscuits composed of the word "Mackinnon's" and his family coat of arms. The use of this trade-mark, it appears, was continued by the respondent after his purchase of the business and good-will. The appellant subsequently re-engaged in the business of biscuit-making, and resumed the use of the words and stamp used by him formerly. The suit was brought by the respondent to restrain the appellant from the use of this trade-mark. The court held that under the terms of the sale the property in the trade-mark passed to the respondent, and that the use of the name and armorial bearings of a family in a trade-mark did not alter its character. It was asked on behalf of the appellant whether he had ceased to have the right to use his own name and the arms of his family. The court said that it was not a question of abandoning his own name and arms, but whether he could so combine them as a biscuit-maker as to interfere with the trade-mark he had sold. This the court held he could not do.

The recent decision of Judge Briggs in a Philadelphia case reveals the necessity of legislation in such states as have not yet modified the common-law restrictions upon the competency of witnesses. Upon a motion for a new trial grounded upon his previous admission of the testimony of a witness who said that, while believing in the Creator of the universe and in a Supreme Power which would punish him here for false swearing, he did not believe in God as commonly understood by the people, nor in a personal God, Judge Briggs decided that his previous action in admitting the evidence of this witness was erroneous, and ordered a new trial. The distinctions made by the witness in defining his belief rendered the point a rather close one upon the common-law authorities, but it is easy to see how a judge of conservative tendencies would be led to the decision reached by Judge Briggs. At the same time it is to be remarked that a general acquiescence in Judge Briggs' view of the law on the part of his brethren of the bench in Pennsylvania, or in other states similarly circumstanced, would be peculiarly unfortunate, since in many cases it must result in a practical denial of justice. A suit will frequently turn upon the testimony of a witness situated as was the witness in the case above referred to, and his exclusion will amount to a refusal to hear one side of the case. For this reason, and also because of the uncertainty attending the exercise of the judicial faculty upon modern developments of religious and anti-religious belief, legislation of such a nature as to bring the law forward to the stage reached by the jurisprudence of such a leading state as New York, for instance, seems to be necessary in Pennsylvania.

An important point in the law of trade-marks came up for review in the English House of Lords on the 13th ult. In the case of the Singer Manufacturing Company vs. Loog, the plaintiffs (appellants) sought to restrain the defendant (respondent), who was the agent of a sewing-machine manufacturing company established in Berlin, from using the name "Singer" in any way in connection with sewing machines. The patents for the machines manufactured by the plaintiffs, it appeared, had expired; but they alleged that the term "Singer" had become a trade-mark, which they were entitled to have protected. The court below protected the plaintiffs as far as the trade-mark was concerned, but allowed the defendant to announce that the machines sold by him were made on the "Singer system." The action of the court below was sustained by the House of Lords on appeal, the Lord Chancellor, in giving judgment, observing that "the reputation acquired by machines of a particular form of construction is one thing; the reputation of the plaintifts, as manufacturers, is another. If the defendant has no right, under color of the former, to invade the latter, neither have the plaintiffs any right, under color of the latter, to claim, in effect, a monopoly of the former. If the defendant has (and it is not denied that he has) a right to make and sell, in competition with the plaintiffs, articles exactly similar in form and construction to those made and sold by the plaintiffs, he also must have a right to say that he does so, and to employ, for that purpose, the terminology common in their trade, provided always that he does this in a fair, distinct and unequivocal way."

That there are bounds to the extent to which railway companies can by special contract relieve themselves from their common-law liability as carriers is rendered apparent by a late case in the English Court of Appeal, decided on December 19. In this case, Brown vs. The Manchester, Sheffield & Lincolnshire Railway Company, which came up on appeal from the Queen's Bench Division of the High Court of Justice, the plaintiff, a fishmonger at Great Grimsby, who had been in the habit of sending fish by the defendant's line to Billingsgate and elsewhere, sued to recover damages for an alleged delay in the conveyance of a quantity of fish from Great Grimsby to Billingsgate market. It appeared that the plaintiff had agreed to free the defendant from all liability on account of damage or loss sustained by delay in transit, or from any other cause whatever, on condition that the company should carry his fish at one-fifth less than the usual carriage rate. At the time the plaintiff's fish was conveyed there was an unusually large quantity shipped for the London and other markets, and the consequence was that the fish, instead of arriving in time for the market, did not arrive till it was over. The court below held that the contract into which the plaintiff entered with the company freed the latter from any liability for any damage or loss sustained by delay or any other cause. On appeal the decision below was reversed. Lord Justice Baggalay, in giving judgment, said that the decision of the appeal must turn wholly upon the question whether the particular condition imposed by the company on the plaintiff in return for the lower rate of carriage was a just and reasonable condition; that the plaintiff had no option whatever, in a business point of view, but to send the fish at the lower rate, that is if he wished to compete with his rivals in the trade; that the conditions of the contract deprived the appellant of his common-law rights, and that under the circumstances they were not just and reasonable. This decision of the Court of Appeal was unanimous.

BUSINESS NOTES.

The St. Nicholas National Bank, of New York city, has changed from a national to a state bank, with a capital of $500,000. The Seaford Bank, of New York city, has been organized with a capital of $500,000, to begin business on the 15th inst.; the officers are W. A. Pullman president; S. G. Boyne vice-president; Stuart G. Nelson cashier; the bank represents the oil interest. The Bank of Clayton, N. Y., has been organized under the state laws, with $26,000 capital. The following national banks have been organized: The National Bank of Christiana, Pa.; capital, $50,000; Samuel Slokom president; William H. Sproul cashier. The First National Bank of Wellsville, N. Y.; capital, $100,000; Henry N. Lewis president; Frank H. Farman cashier. The First National Bank of Menomonie, Wis.; capital, $50,000; Frank J. McLean president; James A. Decker cashier. The Tradesmen's Fire Insurance Company, of New York city, has decided to withdraw from business.

A slight improvement marks the tone of the Lyons silk market, although the Manchester *Guardian* remarks that the recovery is characterized by extreme slowness and difficulty. There is an increased demand for European raw silks, notably for Italian. The Shanghai silk trade is quiet, but at Canton the demand is more active, as it is also at Yokohama.

It is stated by the London *Labour News* of December 16, that at the forthcoming parliamentary session no less than 398 applications for authority to construct railways, tramways, gas and water works, docks, harbors and other large public works will be considered. It is not probable that all the applications will be granted, but the outlook is believed to be bright for work.

At the convention recently held in Cleveland by the wholesale druggists of the United States, some interesting data respecting commercial travelers were presented. It was stated that, in round numbers, there are 200,000 commercial travelers in the country, costing their employers on an average $3,000 each for salary, carfare and expenses. The total outlay in this direction, therefore, is $600,000,000 per annum.

There were 213 business failures in the United Kingdom during the week ended December 16 last, as reported to *Kemp's Mercantile Gazette*, against 231 in the corresponding week of 1881 and 283 in the same week of 1880. Of the total, England and Wales had 197, against 215 and 248 respectively in like weeks of 1881 and 1880; Scotland 14, against 13 and 21, and Ireland 2, against 3 and 14, in weeks ending December 16, in 1881 and 1880.

The labor market in the United Kingdom presents no material changes since last week. The London *Labour News* states that for bridge and roofing materials and electric light fittings there is a brisk demand. At Kidderminster the looms are busy, and "the weavers are trying to exclude strangers." The hosiery trade is good, but the shoe trade is quiet. Birmingham reports the hardware trade brisk, and overtime is the rule.

The Glasgow *Herald* mentions that the famous India salt mines near Miani, on the Punjaub Northern State Railway, include five seams, with an aggregate thickness of 275 feet. Between these lie salt marl strata, making a total thickness of 550 feet. Five hundred laborers are employed. The salt is cut and blasted into blocks about a foot square and six inches in thickness, of fine quality, the general appearance being much like that of red sandstone.

A Rangoon correspondent of the London *Daily News*, writing under date November 10, states that the forthcoming Burmah rice harvest will, undoubtedly, be a bountiful one. Prices at the beginning of the season were still estimated at 55 to 60 rupees per 100 baskets of 49 pounds, dependent, however, on the development of the European demand. There is said to be little likelihood of a demand for Burmese rice from India. The area in Burmah under cultivation with rice is said to be about equal to that of a year ago.

The latest report from the French woolen manufactories, as published by *Jacquard*, is that no improvement has taken place. Even the retail trade in this class of fabrics is complained of, and dealers in many cases are offering to make sales at reduced prices. The combed wool manufacturers in the north of France have begun to work on short time, and other markets for like grades are dull and quiet. The opening season in the Austrian manufactured wool market is reported to be sluggish. In Germany it is worse, and short time has been extensively resorted to. A poor season is likewise the report from the Italian and Spanish wool manufacturers.

An apparently useful publication for the cotton trade, and others interested in the production and consumption of cotton, is "The Cotton Chart of the World," published by F. B. Millar. This chart gives in graphic outline the comparative sizes of United States crops, consumption, exports, proportionate monthly receipts, East Indian and other

crops for 17 years. The fluctuations in prices for 7 years are noted, and the world's production and consumption in 1881–82 are compared. The publisher states that the chart is compiled from "official and reliable authorities." It is gotten up in colors, on heavy paper, and represents considerable hard work in its preparation.

The Pittsburgh *Commercial-Gazette* has evidently been keeping account of all the disasters occurring in 1882. The result is given out editorially in a recent issue of that journal, and only requires comparative statistics from former years to possess more interest, if not value. The totals are:

Tornadoes	306	Floods	163
Boiler explosions	198	Mining explosions	132
Fires	128	Struck by lightning	26
Powder explosions	83	Snow slides	81
Falling buildings	72	Dynamite explosions	11
Fireworks explosions	43	Death on the rails	820
Deaths on lake	150		

Fatal calamities by reason of railroad disasters are thus seen to be the most numerous, yet feared by the general public probably considerable less than death by lightning, by flood, or by fire.

The annual report of the Little Falls (N. Y.) butter and cheese market shows that 104,162 boxes of cheese were turned out in 1882, weighing 6,227,632 pounds, and 3,937 packages of butter, weighing 246,660 pounds. July was the heaviest cheese month, with 16,884 boxes, against June, 1881, with 18,163 boxes. April, 1882, was the heaviest butter month, with 946 packages, as was April, 1881, with 968 packages. There was a decrease in the shipments of cheese, as shown by the following:

	Boxes.	*Pounds.*
1882	104,162	6,227,632
1881	113,056	6,832,007
Decrease	8,894	604,375

There were more packages of butter shipped, but they weighed less than those shipped in 1881:

	Packages.	*Pounds.*
1882	3,937	246,660
1881	3,960	243,407
Decrease	23	Increase.. 3,253

The shipments west of cheese increased 85 per cent. in 1882.

A late number of *Knowledge* (London) contains some interesting facts concerning ostrich farming in Australia. In view of the recent importation of ostriches into the United States the details will prove of interest. A pair of good breeding birds, four years old, are worth about $1,000. They lay about sixteen eggs three times a year; say, on an average, forty eggs per annum. The birds are plucked once in about eight months. The male ostrich furnishes about fifty feathers, worth about $40; the female bird's plumage is said to bring about $25. The dyeing of ostrich feathers is an extremely delicate operation, as the same dye gives a different tint to various portions of the feather. Before dyeing the feathers have to be washed several times. This takes three or four days. The quill is then scraped to render them light, and a "more desirable and lighter substitute provided." The curling is performed by girls, a great deal of skill being required. It is added that the value of the feather, after all, depends on its tint, and unless its hue is approved "by fashion" the feather is useless. The present value of the Australian trade in ostrich feathers is said to be about $375,000 per annum.

The current number of the London *Chamber of Commerce Journal* contains an excellently prepared map of Madagascar. The article accompanying it affords extensive information concerning its mineral, geological and botanical features. The northeast portion of the island, where the French have recently displayed a disposition to make a commercial conquest of the country, is clearly indicated. It appears that Europeans have always been regarded with distrust by the inhabitants of Madagascar, to which cause is to be ascribed the small foreign trade of the island, and the absence of roads in the country. It is believed, however, that ere long Europeans will be more favorably regarded. At all events, if the misunderstanding between France and the Queen of Madagascar is settled by the latter allowing the French to open a portion of the country, build roads and work mines, a great advance will have been made. The present foreign trade of the island is said to include purchases from Great Britain to the value of about £350,000 annually, hides and india rubber from America valued at about the same amount, and about £70,000 to £100,000 each from France and Germany.

A correspondent of the Constantinople *Eastern Express*, writing from Volo, refers to the latter city as "the future Liverpool of Greece." This is called out by the unexpected commercial activity recently developed there. Real estate is advancing, new buildings are constructing, and the harbor is said to be full of steamers and vessels. No wharves have yet been built, and the number of lighters is inadequate to the demand. Labor has advanced to what would once have been deemed exorbitant prices. The railway company has received a grant to construct a pier large enough for six steamers to unload at once, with the privilege of charging toll on all goods received there. There are about 700 villages in Thessaly, says the Manchester *Guardian*, and it is believed that the day is not far off when they will have 2,500,000 to 3,000,000 cwt. of wheat for export, in addition to tobacco, oil-seeds and oils. The most desirable articles for importation at Volo are mentioned as rice, sugar, coffee, petroleum, iron, other metals, candles, vitriol, clothes, cutlery, earthenware and salt fish. The belief is also expressed that Volo's annual importation of 100,000 tons of commodities of all kinds annually will soon be doubled.

The annual report of the Silk Association of America on the imports of silk manufactures, of raw silk and of pierced cocoons and waste silk, at New York and San Francisco, has appeared for 1882, with the customary comparative figures. The imports at New York of silk manufactures during the calendar year 1882 were valued at $38,634,034, against $31,636,377 in 1881, $33,305,460 in 1880, $25,830,829 in 1879, $19,922,741 in 1877 and $24,379,322 in 1873. The gain in imports during 1882 was about $7,000,000, or nearly 23 per cent. This will explain the complaint which has been variously heard concerning lavish purchase of luxuries. Silk piece goods importations alone have increased over $4,000,000 in value; laces over $1,100,000; silk and cotton fabrics about $800,000, and velvets about $500,000. The imports of raw silk at New York and San Francisco in 1882 was 197 bales greater than in 1881, and nearly 1,000 bales in excess of 1880. The value of the import of raw silk in 1882 was $14,040,808, against $11,936,865 in 1881 and $11,478,727 in 1880. There were 3,040 bales of waste silk and pierced cocoons imported last year, valued at $948,402. This is an excess of any year reported except 1879, when the number of bales was 3,829 and the value $1,583,841.

The Clyde ship-building trade in 1882 is stated, by the Glasgow *Herald*, to have been one of unusual activity. The returns present a total of 50,912 tons above the total constructed in 1881, and 129,500 tons in excess of 1874. Many of the Clyde builders are said to have more tonnage already ordered for 1883 than they have turned out during the past year, which speaks well for the prospects for 1883. There were launched during the year by the various firms engaged in ship-building on the Clyde 291 vessels, of an aggregate tonnage of 391,934 tons, as against 261 vessels and 341,022 tons during 1881. The use of steel in the construction of vessels is said to be on the increase. The majority of large steamers are said to be now built of that material. In 1879 the Clyde steel-built vessels amounted to 18,000 tons, in 1880 they rose to 42,000 tons, and in 1881 to 66,609 tons. During the past year, the steel vessels numbered 60, of an aggregate tonnage of 108,254 tons. The use of wood for ocean-going steamers and vessels, on the other hand, is declining, only 2 being noted, and they small ones, in the entire list of Cylde construction in 1882. "As a matter of fact," adds the *Herald*, "the construction of 'wooden walls' is being monopolized by our American cousins." The vessels launched on the Clyde were made up as follows: 172 screw steamers, 37 sailing ships, 14 paddle steamers, 8 yachts, 21 barges, 5 barks, 2 war ships, 2 hopper barges, 5 screw tugs, 10 steam launches, 4 lighters, 8 dredgers, and 3 cargo flats. The Tyne has a monopoly of tugs, and the east coast of England devotes its energies to cargo-carrying boats.

The *Minnesota* (formerly the "Minneapolis") *Tribune*, in summing up the year's business at the city named, says that, as in former years, the flour-making industry stands at the head, with 3,124,919 barrels manufactured during 1882. The Minneapolis lumber mills rank next, with a total output of 312,239,000 feet of lumber. The value of the flour manufactured was $19,718,240. The number of men employed by this industry is 1,200. There are 500 men engaged in the lumber mills, and the value of the past year's product was $4,998,800. The sash, door and blind factories also give employment to 1,200 men, and the value of the total product was $2,030,000. Barrel and barrel-stock making engaged 960 employés, and were valued at $2,140,000. Agricultural machinery works employed 500 men, and the product was valued at $1,980,000. There are 1,300 men engaged in manufacturing cars, the annual value of which was $1,870,000, and in machinery and castings 650 men were engaged and the yearly product is placed at $1,632,000. The total number of employés in Minneapolis industries is given at 9,912, and the annual value of the product at $43,759,490. The total value of flour manufactured is less than in 1881, for which year the figures were:

Flour	$22,500,000
Lumber	4,321,000
Miscellaneous manufacturing	14,872,356
Total for 1881	$41,693,356
Total for 1882	43,759,490
Increase for 1882	2,066,134

The loss of $2,781,760 in value of flour produced in 1882 was due to the inferiority of the wheat crop. Minneapolis shows a net gain, industrially, therefore, of about 5 per cent. in the past year.

STATISTICAL TABLES OF FAILURES OF THE YEAR.

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

If the stock market could be talked into a rise we ought to have during this month of January a "January boom" of the most brilliant description. For the past three or four days Wall street has been flooded with rumors that this and that great operator predicted a general rise in the market; that no stock was so poor that it would be left behind; that the public—the long-lost and much-longed-for public—would return and buy stocks with enthusiasm when prices had been run up to an attractive hight, and a whole lot more to the same comforting effect. It would not do to count too confidently on the truth of these predictions, for it is very certain there are an unusually large number of operators in the street who are carrying an uncomfortable load of stocks, which they would very gladly dispose of to buyers without waiting for prices to rise to any very great hight. In fact, this seems to be the chief trouble with the market now—there are too many stocks for sale and too few buyers. Nevertheless some progress has been made in advancing prices since the new year opened. It did not open in a very promising way, since there was a bad break on Tuesday in the prices of nearly all the best dividend-paying stocks of the street. This, however, is often the preliminary to a rise. The large operators who give direction to the market often begin an organized upward movement by a raid on the market, causing a general depression. Sometimes this is done to get more stocks at cheap rates; sometimes it is done to get the crowd of small traders to sell, and thereby create a short interest which will be scared into purchasing to cover as soon as the upward turn follows, thus assisting in the rise. If the break of Tuesday was caused in this artificial way, and not by real selling out by holders of stocks, and was effected for the purpose of helping to make an upward turn, it certainly was attended with a fair degree of success. The market did turn the next day, and prices were "steamed up" on the following days in all the recognized high-pressure fashion. How long this will last is another question.

One feature of the market at this time is somewhat peculiar. It is a fact that several leading operators, who would in a general way be classed as regular bears, are now loaded with stocks, and, desiring to sell, are of necessity on the bull side. They have bought heavily of a number of stocks which have been declining largely in the past six months, and because they had so declined seemed desirable purchases. Unluckily for them, it happens that with some of these the decline was caused by the poor condition of the properties the stocks represented; and at this range of prices they are found to be just about as unsalable as they were at the higher range from which they fell.

The regular Wall street methods of manipulation in the maintenance of quotations for stocks are good so far as they go; the trouble is that, after all, they don't go very far—not nearly so far as is commonly supposed. They have their limits, and their limits are found to be, in the long run, very near to the intrinsic value of the stocks, or at any rate what the public suppose to be their intrinsic value. The one is as good as the other so long as the supposition lasts, but let it be shown that a property is not nearly so valuable as it was thought to be, and all the arts of manipulation are helpless to prevent the price of that stock declining, gradually it may be, in the ratio that the knowledge spreads, until it reaches the lower level representing the new idea of the value of the property. The earning capacity of a property in proportion to its obligations is the final standard by which a stock must be measured in respect to price. The rare exceptions are where from position, or some other relation to its surroundings, the property has a value outside of its earning capacity. This is, of necessity, temporary only. Manipulation is playing an important part in the rise of prices now; but the public must come in and buy, or the manipulation will go for nothing, and the rise will go but a little way and be followed by a speedy drop.

Litigation for stock-jobbing purposes seems to be the order of the day at this time. The atmosphere of Wall street is surcharged with it. There is an epidemic of lawsuits. The credit of employing the courts as an important adjunct to the Stock Exchange must fairly be given to Mr. Gould; but he has taught the lesson how it may be done, and he is getting it put to him in a style which shows that the lesson has been well learned. The exhaustless crop of suits which have sprung up, and are springing up all over the country, against the Western Union, furnish a conspicuous example of the way the courts may be employed to "bear" a stock. Furthermore, there appears to be a turn in the tide of that success with courts and judges which hitherto has marked Mr. Gould's career; and the fact has not been lost upon Wall street that judges in this city have been giving decisions, one after the other, adverse to his interests, who were credited with being sure to give them the other way. Indeed, some observers have remarked that there seemed to be a race between the members of the judiciary to see who could most speedily render a decision against the once all-powerful ruler of courts and the stock market. These are significant signs of the times that he who runs may read, and it was even more significant that, at the organization of the state Legislature, the member elected to the speakership by the dominant party, and the member who received the complimentary nomination for that office by the minority party—thereby being formally invested with its leadership—were the two solitary members of the committee which investigated Judge Westbrook's acts who signed the minority report recommending his impeachment. It was, indeed, their attitude in that famous investigation which marked them out for distinction. Their advancement at this time, in the way mentioned, is a fact which has by no means been overlooked by persons and interests most keenly affected by it. We seem to be on the eve of great changes. It must not be forgotten that a board of railroad commissioners has to be appointed this session. The "railroad question" is likely to become a prominent one. It will require much knowledge, sagacity, firmness and moderation to deal with it. There is the opportunity to do much good, and the danger of doing great harm. So vast is the capital invested in railroads that the public debt sinks into insignificance beside it.

The status of the Nickel Plate road was yesterday officially established by the election of a Vanderbilt Board of Directors, as follows: J. H. Devereaux, president; Cornelius Vanderbilt, W. K. Vanderbilt, H. McK. Twombly, W. C. Whitney, S. Burke, Augustus Schell, Anson Stager, George J. Magee, J. H. Wade, Charles Hickox, James Tillinghast, D. W. Caldwell. The road becomes a sort of second track to the Lake Shore, and that company will issue six millions of bonds, it is stated, to pay for the interest acquired in the property by the purchase of its stock. The latter, we may assume, will go into the Lake Shore treasury.

In respect to the events of the week it may be remarked that the loan market had a slight squeeze on Tuesday, rates running up for a time to 12 per cent. As this was coincident with the decline in the price of stocks that day, and as there has been no squeeze since, the fact may be taken as presumptive evidence that money was temporarily locked up for the purpose of causing a depression. The banks, as will be seen by the statement, are strong in reserves, and they were paying out freely on the first of the year, so that it was reasonable to expect that loanable funds would be abundant at that time. They have been so since, the average rate being 5 per cent. The large payments for January interests and dividends are supposed to furnish a basis for the rise in stocks, as it was said that this money must be reinvested, and the purchase of securities would be a necessity. Except as money may be temporarily made artificially scarce, we may expect an easy loan market for some months, as money is flowing and will continue to flow to this center. In London, if we may take the utterances of the local financial journals as an indication, they do not look for any great ease in the loan market yet. The Bank of England still maintains its discount rate at 5 per cent., and its reserve of specie was again reduced during the week from 361/16 per cent. of liabilities to 29⅞ per cent., which is pretty low for that institution. Foreign exchange continues quiet. Posted rates are $4.81@4.85. Actua rates yesterday were $4.80@$4.80½ and $4.84@$4.84½. Government bonds are dull, and the market presents no new features except a somewhat lower range of quotations. The following were the closing quotations yesterday:

	Dec. 29, bid.	Jan. 5,—bid.	Jan. 5,—asked.
U. S. 4s extended (3½ p. c.)	103	102	..
U. S. 6's 1891, registered	113	113½	113⅝
U. S. coupon	113	113½	113⅝
U. S. 4s 1907, registered	119¼	119½	119⅜
U. S. 4s 1907, coupon	120¼	119½	119⅝

The bank statement of Saturday showed that the banks were closing the year with a larger reserve than they began it; and therefore with a degree of strength, compared with liabilities, in advance of the corresponding period last year. There was a decrease in the surplus reserve during the week amounting to $1,896,875, partly accounted for by the amounts withdrawn for the January settlements, so that there was nothing alarming in this feature of the statement. The following shows the changes in the averages for the week:

	December 23.	December 30.	Differences.
Loans	$309,774,100	$311,071,200	Inc. $1,296,800
Specie	59,148,900	57,627,100	Dec. 1,521,800
Legal-tenders	18,835,500	18,654,100	Dec. 171,300
Deposits	290,848,900	291,663,600	Inc. 814,700
Circulation	18,163,100	17,625,500	Dec. 537,600

The proportion of total reserve against liabilities is now 26.15 per cent.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

The dispatches to BRADSTREET'S this week show that the general trade throughout the country is in a fairly active state, although still suffering from the suspension incident to the close of the year. The dry goods trade shows a marked inactivity. The cotton markets have been depressed in the face of increased receipts at the American ports. Wheat has advanced a little during the week, on account of the continued unfavorable prospects for a crop in Europe next summer, but the stocks of wheat in store are increasing, and the movement of flour is larger than usual, which has a tendency to prevent an advance in wheat. Corn has advanced slightly under speculative influences and very small stocks in all the eastern and seaboard markets, but the movement at the west is increasing. Provisions are gradually declining. The iron market is more depressed than it has been during the past few weeks, prices of pig and manufactured iron being lower and weaker. One-third the capacity of the steel-rail mills has been contracted for during 1883 at prices in the neighborhood of $40. Coal is dull, and cutting of prices is reported. No arrangement has yet been made concerning the expected restriction of output. Ocean freight for charters are firm, but very few charters are offering. The demand for accommodations for petroleum constitutes the feature of the week. The year's exports of petroleum (crude equivalent) is over 9,000,000 gallons less than in 1881. Certificates of crude have not varied much during the week. The tendency has been upward, but the Schultz well, which has been expected to come in from day to day, has exercised a depressing influence. There has been more inquiry for wool, and the general feeling among holders is steadier and more hopeful. There were 257 failures in the United States reported during the past week, 15 more than the preceding week and 105 more than the corresponding week last year. This is the largest number in any single week in two years.

BREADSTUFFS.

One of the peculiar features of the present situation in the breadstuffs markets is the apathy which prevails in view of the extremely unfavorable prospect throughout Europe for the next grain crop. The markets of both Europe and the United States seem to be completely devoid of any speculative spirit, or indeed of much activity of any kind. The stock of wheat now in Liverpool is something less than 625,000 quarters, or less than 5,000,000 bushels. It is understood that between 3,000,000 and 4,000,000 of this is held by certain capitalists, who shipped it from this country some time after the 1st of August, and hold it there on speculation. Possibly 1,000,000 to 2,000,000 more may be held in the same way in New York, Chicago and Milwaukee by capitalists who have bought it for an investment, because they thought it cheap, and will hold it for an important advance. But this is not active speculation, such as so often prevails in all the breadstuffs markets. There have been no corners nor any attempt to advance prices for nearly two months. And yet the situation is such as to make almost a certainty of a very short crop throughout Europe next summer. Some of the latest private cables and letters to New York exporters estimate that not much above one-third of the usual area of wheat has been planted in England up to the 20th of December, and while it is not improbable that this is an underestimate of the amount of sowing, it is still quite plain that under no circumstances can the grain crops of Europe be above two-thirds of an average. The reports on Thursday of disastrous floods in nearly all parts of Europe did, indeed, cause an advance in wheat in Chicago and New York of an average of 1½c. per bushel on all options; but this was the first symptom that the foreign situation had had any effect. Liverpool grain dealers write their correspondents here that they have confidence in the distant future options for both wheat and corn, but in the case of wheat the 4,000,000 bushels or so that is held in Liverpool, as before mentioned, has operated to prevent any considerable advance in prices, because it was presumed the parties had got tired of carrying it and would attempt to sell out whenever the market advanced. On the other hand, the scarcity and high rates for ocean freight room, which existed up to ten days or two weeks ago, operated against exporters. Freights are, in fact, comparatively high yet, so that shippers do not feel disposed to make engagements far ahead. The most prominent features in this situation, however, seem likely to change soon so as to result in both higher prices and a more active export movement. As was mentioned in our article of two weeks ago, it is now estimated in England that the supply of wheat from farmers' deliveries of home-grown grain, together with the probable supplies of foreign grain, would not be equal to the consumption, until March 1, by about 4,000,000 bushels, and that consequently the stocks in store in the United Kingdom would show a decrease to that extent by the date mentioned. There seems no reason to doubt that this calculation will prove to be approximately correct, even allowing for considerable increase in the export movement from the Atlantic ports of the United States. The vessels which were compelled to leave the trade last summer on account of the almost total absence of any grain freights from the Atlantic ports are rapidly coming back into the trade, and there seems ground for the expectation, that within the next two months, there should be higher prices for breadstuffs and lower freights, and yet also a larger export movement of grain from the Atlantic ports of the United States.

The exports of breadstuffs from the seven Atlantic ports in the week ending January 3, were 185,155 barrels of flour, 1,264,987 bushels of wheat, and 518,032 bushels of corn, against 180,368 barrels of flour, 812,811 bushels of wheat, and 367,522 bushels of corn, the preceding week, and 65,439 barrels of flour, 661,512 bushels of wheat, and 520,466 bushels of corn in the corresponding week of last year.

AMERICAN WHEAT MARKETS.

The condition of the American markets for wheat, as shown in the foregoing remarks on the markets for breadstuffs generally, has been one of unusual apathy until the latter part of the present week, when the reports of floods in Europe and of the small area of wheat planted there have imparted a little more animation and caused some anxiety to cover short sales made for all the futures. This resulted in an advance of about 1½c. in New York and 2c. in Chicago on Thursday. But so far as can be ascertained, it was due only to the coverings of the shorts, and not to any buying of wheat for an advance. In New York exporters find but little inducement in the present relative prices in this city and Liverpool to pay high freights, though, as remarked above, they all think well of the futures as far ahead as May. New York is at some disadvantage as compared with both Boston and Baltimore in the way of elevator and transfer charges on grain, consequently the export of grain on very close margins is proportionately larger from those ports than from New York. At Chicago there are very few shipping orders for wheat, and the advance in prices there in the latter part of the week was due to the covering of the shorts. The movement of wheat at the west shows no great change. The total receipts at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria, in the week to December 27, was 1,229,827 bushels, against 1,036,038 bushels in the preceding week. The movement of the wheat crop is, however, getting to be more and more in the form of flour from Minneapolis, and, therefore, is not represented in the receipts and shipments of wheat at these points.

The receipts of flour at Chicago last week represented about double the quantity of wheat received during the same time in the form of grain. The understanding of this fact has had its share in repressing speculation in wheat at Chicago. On Friday both the foreign and American markets for wheat were firmer, though with no material change of prices. The weather in England continues wet and unfavorable.

The visible supply of wheat in the United States and Canada (exclusive of the Pacific coast), on December 30, showed an increase of 553,480 bushels as compared with the previous week.

CORN.

Corn and oats have both advanced in the latter part of the current week. Corn is higher from a variety of causes, the first of which is the belief that the crop, both in quantity and quality, will fall below the expectations entertained a month or six weeks ago. There is a large demand for corn for feeding in both Illinois and Iowa, and the latter state, though usually one of the corn-exporting states, has been importing corn from Kansas for consumption. At present prices for hogs it pays better to feed the corn than to sell it. Until very recently the large crop of oats furnished a cheap substitute for corn in many kinds of feeding, but it is remarked that this has caused a much greater consumption of oats than was ever known in the United States before, which has kept the visible supply of oats lower than was expected from the large crop. This latter feature has resulted in a slight advance in prices of oats in all the markets this week, with the prospect that a diminishing supply will cause a further advance in prices. This in turn has its effect on the price of corn. The stocks of corn everywhere also continue extremely small compared with former years, which makes the markets susceptible of manipulation, the fear of which also prevents any decline. The movement of corn at the west is increasing, though not in the proportions that would be expected at this season of the year. The total receipts at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria, in the week to December 27, were 2,380,875 bushels, against 1,690,900 bushels in the week to December 20, 1,567,188 bushels in the week to December 13, and 2,187,057 bushels in the week to December 6.

One of the features which helps to repress speculation in corn is the fact that about 75 per cent. of the arrivals at the principal western points grades below No. 2 and sells for from 4c. to 7c. per bushel less than No. 2. This low grade corn is largely taken for shipment to eastern points for purposes for which it is nearly as good as No. 2, and this leaves the speculative grade of No. 2 without the support of a large part of the consumptive demand. Still another fact is that, owing to the large stocks of whisky now on hand, the demand from distillers is likely to be restricted to low prices for corn this year.

The visible supply of corn on December 30 showed an increase of 870,733 bushels as compared with December 13. In the same time the visible supply of oats showed an increase of 1,160,494 bushels.

PROVISIONS.

The provision market has been very dull for two weeks. Prices have been pretty well maintained, but a dull market always causes a declining tendency in price of anything. The causes which have operated to advance the price of corn have, in this instance, had the reverse effect on provisions. Farmers have kept their corn to feed to their hogs, and the latter have come to market in larger quantity than was expected even by the packers. This has caused a decline in the prices of both hogs and provisions, though in the latter half of the week there was an upward reaction of about 15@20c. per barrel in pork, and a corresponding one in lard. The consumptive demand for provisions is still good, though shippers and exporters are holdin off in expectation of still lower prices.

THE NEW YORK DRY GOODS MARKET.

The New York dry goods market for the first week of the year opens quiet, but not unusually so; it is generally a dull week. Jobbers from the interior are arriving and looking around, and naturally some sales are made. The clothing trade report a like condition of affairs. In connection with this trade there seems to be a general disposition to contract stocks, especially among the larger houses, and this, we are assured by close observers, is prevalent in all the large manufacturing cities. The disposition is to avoid the necessity of cutting prices in order to reduce a large stock that is likely to be carried over. Many houses have found that at the end of a season they have had to dispose of the balance of their stock at prices that wiped out the profit made earlier. By manufacturing about 25 per cent. less they hope to avoid this in future. The importations of dry goods are as follows:

	No. of packages.	*Value.*
Total imports of dry goods during past week	7,790	$2,344,146
Total amount of dry goods, duty paid, for past week	5,214	1,847,659

THE BRITISH COTTON GOODS MARKET.

[By Cable to BRADSTREET'S.]

London, January 5.—Manchester cotton merchants complain that the spinners obtain all the benefit from fall in prices of the raw material. American cotton is much more depressed than Indian.

THE DRY GOODS MARKETS BY TELEGRAPH.

From Boston, Mass.: The dry goods trade generally has been quiet except in cotton goods, in which quite a heavy movement has taken place in consequence of the marking down from ¼@½c. per yard. The time for such a movement was opportune as the jobbers were nearly out of cottons. With some exceptions the retailers have succeeded in reducing their stocks satisfactorily. In woolen goods the same quiet has prevailed. The woolen mills are quiet, the reason given being tariff uncertainties. The facts are that the market is overstocked and the demand light except for some special styles.

From Providence, R. I.: The print cloth market is quiet and easier than last week. The sales are reported small; 64s are quoted at 3 11/16c. less ½ of 1 per cent., and 56x60s at 3¼c. There are about as many pieces on hand as last week, the production and sales being nearly equal. The cotton market is quiet, the sales being light. Middling uplands are worth 10⅝c., and middling gulfs, 11c. The stock on hand is about 5,000 bales.

From Philadelphia, Pa.: The jobbing trade by personal selection has been small, but a fair seasonable business has been done on orders. Agents have been making a good many deliveries on account of previously recorded orders, but new transactions in most departments have been light. The general market is steady.

From Pittsburgh, Pa.: The dry goods trade is quiet, as it is expected to be at this season of the year.

From Cleveland, Ohio: The dry goods market presents no change from last week.

From Columbus, Ohio: The dry goods market, characteristic of this season of the year, has been quiet, and, while orders are coming in, merchants are simply footing up. Collections have improved, but are still only fair.

From Indianapolis, Ind.: Evansville reports dry goods trade quiet.

From Chicago, Ill.: The dry goods trade is more active, with liberal orders for woolens and staple cottons. There is a better demand for groceries from the interior.

From Peoria, Ill.: The dry goods trade is light, owing to the withdrawal of traveling salesmen.

From Detroit, Mich.: In dry goods business is dull; purchases only made to keep up assortment.

From Louisville, Ky.: Dry goods and clothing are in restricted demand.

From St. Louis, Mo.: The dry goods trade is in moderately fair volume, with tolerably steady values. The jobbing trade generally is quiet, but heavier than was anticipated for the opening of the year. Collections are a little better than they have been lately.

From Burlington, Iowa: Dry goods sales run light but steady.

From Minneapolis, Minn.: The dry goods trade has ruled rather quiet, but the severe weather has brought numerous orders for heavy winter goods, enabling jobbers to reduce stocks materially. A fair order trade has been reported during the holidays. The general jobbing trade is quiet; most firms are taking account of stock, and traveling men have been on vacation; still a fair business is reported.

From Omaha, Neb.: Collections only fair, as dry goods sales are still small and no lasting improvement is looked for until next month.

From San Francisco, Cal.: There is nothing worthy of note in the dry goods trade. Stock-taking exhibits satisfactory results generally.

From Baltimore, Md.: The volume of business in dry goods the past week was very moderate, and that market had no special feature to note. Jobbers and commission men say that the sales of the past year compare favorably with those of 1881, and look for a good business during the spring and fall of this year.

From Richmond, Va.: The dry goods trade only fair.

From Norfolk, Va.: Jobbers report the dry goods trade quiet.

From Wilmington, N. C.: The dry goods jobbing trade is quiet.

From Savannah, Ga.: The dry goods trade is still unsettled, and merchants are cautious, except to first-class buyers.

From Galveston, Tex.: No change of consequence in dry goods trade since last week. Cotton moving lively.

From Nashville, Tenn.: The dry goods market has been quiet with but little doing.

From Memphis, Tenn.: Jobbers in dry goods report business dull and shipments light for past week.

COTTON.

The total receipts of cotton at the ports since September 1 are 3,657,891 bales, against 3,228,931 bales for the same time last year. The receipts at the ports for the week are 224,735 bales, against 251,192 bales last week and 148,330 bales for the corresponding week last year. The receipts at the twenty-four interior towns usually reported for the week are 60,625 bales, against 99,226 bales last week and 31,914 bales for the corresponding week last year. The shipments for the week were 58,199 bales, against 71,450 bales last week and 31,914 bales for the corresponding week last year. The stocks for the week were 345,884 bales, against 334,563 bales last week and 408,159 bales for the corresponding week last year. The New York cotton market has been lower for spot middling uplands and the price has declined to 10⅛c.. The future market has declined 17 points for near months and 13 points for later months. Below will be found the closing quorations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
Ordinary	7 9-10c.	7 11-16c.	9 3-10c.
Strict ordinary	8	8⅛	9¾
Good ordinary	8 13-16	8 15-16	10 9-16
Low middling	9 11-16	9 13-16	11 7-16
Middling	10⅛	10¼	11⅞
Good middling	10⅜	10½	12¼
Middling fair	11 1-16	11 3-16	13
Fair	11 13-16	11 15-16	13¾

The New York spot market closed quiet.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
January	9 98c.	10.19c.	11.93c.
February	10.70	10.27	12 17
March	10.24	10.40	12 42
April	10 38	10.53	12.61
May	10.52	10.65	12.77
June	10.66	10.78	12.91
July	10.77	10.90	13 03
August	10.89	....	13.13

New York market for futures closed steady.

WOOL.

The wool markets open the new year in better shape, with encouraging indications of returning activity and firmness. Prices have touched a lower point than for some months past, and the feeling is gaining ground that bottom has been reached—at least on really desirable wools. Very few manufacturers are carrying stocks in excess of immediate wants, and little, if any, decrease in production is anticipated. The unsettled tariff question is used as a bear argument against the stability of values, but has little active influence on the market. Within a few days past manufacturers have been buying more freely, and in exceptional cases low prices have tempted speculative purchases by dealers. As a general thing, there is less pressure to realize, and at the close prices on fine wools show a partial recovery from the lowest point touched prior to the close of the year. Some large transactions have taken place in this class of stock, and buyers are still looking about for cheap lots, but find holders less inclined to accept business at the lowest rates paid last month.

IRON.

The market for iron has recorded no improvement during the past week. In pig, prices have been shaded a fraction lower than yet reported. A few sales have been made, but mostly of inferior grades. About 1,000 tons of Scotch pig have been sold, about one-third out of stocks and two-thirds to arrive. Late arrivals have mostly gone into store. Prices of Scotch have also gone off a little. This is largely in accord with the market abroad, where consumption has declined considerably, although stocks in Connal's stores and in makers' hands have decreased about 104,000 tons on the year. Cheap freights, 5@6s. from Glasgow to New York, have also had an influence. Low freights have been induced owing to absence of heavy freights to this side from abroad and in part by the slack demand here. Such rates, amounting to $1.25@$1.50 per ton for carrying pig iron from Glasgow to New York, equal to about the drayage from the docks to the Forty-second street depot, in New York, could only be quoted under the existing dullness of trade. Manufactured iron is weak and dull. Consumers of manufactured iron are doing better than producers, but are not making special profits. Refined bar is quoted at Philadelphia at 2.35c. Tank, ship, plate and angles are weak and out of request, being held at 2.6c. Quotations for large lots are not made at the Iron & Metal Exchange Company (Limited), owing to absence of sales in quantity. Bessemer pig is dull at $22@$23. Steel rails are quoted nominally at $40, cash at the mill. One or two small orders have been placed of late, but it is currently reported (although difficult of confirmation) that nearly 700,000 tons have been contracted since the $40 quotation was made. This is about one-third the annual capacity of the mills of the United States, probably nearly all that is wanted at the rate named. There was a meeting of producers of pig iron at the rooms of the New York Iron & Metal Exchange Company (Limited), on Wall street, yesterday afternoon. The attendance was fair. It was stated that the object of the meeting was primarily to perfect an organization of American pig-iron makers. A committee was appointed to effect an organization. The association will be known as the Eastern Pig Iron Association. Its objects are to sell pig iron in open market east of the Alleghanies, and in general to protect the interests of members.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, January 5.—There has been very little new business doing in iron. Prices are weak.

DOMESTIC IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: There have been some fair transactions this week, and it looks now as if the general expectation of a good January trade will be realized. Standard brands of crude are more firmly held. Bessemer and all foreign iron is dull. Merchant bars are fluctuating. Nails are drooping. Construction iron is dull. Consumers are discounting prospective tariff reductions. Steel rails are selling in small lots, but large transactions are probable during the month.

From Pittsburgh, Pa.: The future of the iron market cannot be easily predicted thus early in the season. There is no change worthy of note in price, but there is inquiry for large quantities for delivery during the ensuing six months. If buyers and sellers could meet as to price it is believed the volume of business would be large. The price of nails remains very firm, and stocks in hands of makers are light. The demand at this season is small, but with the increase of orders, which always occur early next month, manufacturers are inclined to believe there will be a repetition of last fall's condition of trade. All the nail factories in the west will shut down on the 15th inst. for a brief period, and it is believed prices will continue firm.

From Cleveland, Ohio: The pig iron market presents no change from the condition of things last week.

From Chicago, Ill.: Bar iron and nails quiet with average sales for the season. Steel mills report a slightly improved inquiry for rails at 39@40 for this year. There is a prospect that some mills will soon resume. Nail mills will temporarily close.

From Detroit, Mich.: In iron the situation remains unchanged. Present stringency in money market given as principal cause for inactivity.

From St. Louis, Mo.: An excellent feeling is manifested among iron men as to the outlook. Trade in manufactured iron keeps up well. Several rolling-mills open this year with better contracts than last, and expect their output to be larger. Nails are exceedingly firm at the 3.75 rates.

COAL.

Coal is dull—duller than it has been since the suspensions of work last summer. This is in part caused by the late open weather, and in part by the customary slackening up of business at this time of year. Prices, by some dealers, are well maintained, but, on the other hand, the rates are cut by dealers finding it to their advantage to do so. No arrangements have yet been made looking to a suspension of work at the mines. There is little doubt, however, that labor there will be curtailed during the latter part of the current month or in February. The output of Pennsylvania anthracite will exceed that of 1881 by about 1,000,000 tons. If the present cold snap continues for any length of time it is likely that a revival in local trade will result.

PETROLEUM.

The year 1882 will not soon be forgotten by the petroleum trade nor by those whose connection therewith is confined to speculating in certificates of crude oil. The twelve months have witnessed excessive fluctuations in prices, and the production has gone higher and dropped lower again than ever before in so short a space of time. On January 1, 1882, the aggregate daily production of crude petroleum was about 85,000 barrels. To-day it will be generally conceded to be not over 65,000 or 67,000 barrels. The total number of wells in the regions is about 17,000, averaging a little less than 4 barrels daily each. There were 918 drilling wells and rigs up and building one year ago, against 262 to-day, a falling off in exploitation of 656. There have been 3,283 wells completed during 1882, 1,598 in Allegheny, 865 in Bradford, and 820 in the lower oil country. At the beginning of last year drilling operations in Alleghany indicated that that region was practically declining, and a steady advance in the price of oil was looked for. Suddenly the coming in of the now noted "646" well in the Cherry Grove tract was reported, and a cloud was cast over the bull clique on the petroleum horizon. The history of the effect of the Cherry Grove wells on the market has been duly recorded in BRADSTREET'S. The first five wells there gave a total of 7,000 barrels daily. In four months, by August, the daily production of petroleum in Cherry Grove was over 40,000 barrels. Then came the collapse. The pool was drained and one after another the spouters ran dry. By September 1 the Cherry Grove daily production had dwindled to 10,000 barrels. During the period of which we have just been speaking the market for certificates of crude had followed closely on the heels of the statistical position of the product. From September on to the close of the year was a period of convulsive fluctuation in prices, based almost entirely on the manipulations of well-owners and other speculators in petroleum. Prices of certificates of crude closed January 3, 1882, at 81¼c. against 88⅞c. on January 3, 1883, an advance of 7⅝c. on the year. Transactions in certificates were not heavy during the first four months of 1882. The average price for January was 83⅛c., the highest 86⅞c., lowest 79¼c. In February the lowest was 80⅞c., the highest 88¾c., and the monthly average, 85c. The tendency of prices was down. The highest price in March was 84⅛c., the lowest 78½c., and the average 81c. In April prices continued the lower course, the highest being 80⅝c., the lowest 75⅛c., and the monthly average 81c. In May, the top figure reached was 76½c. (the 4th). From that date the drop continued through the month, closing at 55½c., the average for the four weeks being 71½c. June witnessed lower prices and some fluctuation, 64c. being reached on the 2d. Later, however, 51⅛c. was touched, and on the 30th 53c.; the monthly average was 54⅜c. On July 6, the lowest figure was reached, 49⅜c., the highest for the month being 63⅛c. (on the 31st), and the monthly average 57⅜c. August was dull, and prices remained heavy, production in Cherry Grove being at its flood; 61½c. was the highest, 54½c. the lowest, and 59⅝c. the average price. More animation was noted in September, as it had become known that the Cherry Grove region was rapidly declining. The lowest price was 53⅜c., the highest 95c., and the average 72½c. October saw prices touch 99c. and drop again to 88c., the average being 93¾c. November's fluctuations were marked and violent. The highest price was $1.36 (on the 6th), the lowest 87c., and the average $1.14½. The month's sales of certificates was enormous. December was a quieter month, but furnished the final spasm of the year in the shape of a panic, resulting in heavy losses—to those best able to stand them. The highest price was $1.16¾, the lowest 74¾c., and the average price 92¼c. The average prices of certificates of crude since 1860 have been as follows:

1860	$9 77	1872	$3.68
1861	.52	1873	1.84
1862	1.00	1874	1.17
1863	3.11	1875	1.33
1864	7 85	1876	2 61
1865	6 66	1877	2.37
1866	3.76	1878	1.17
1867	2 40	1879	.86
1868	3.57	1880	.94
1869	5.64	1881	.85
1870	3.86	1882	.78½
1871	4.42		

During November and December the redrilling of certain wells in Warren and Forest counties, some of which came in heavy, was largely responsible for the gyrations of quotations referred to above. The situation, with reference to them, to-day is that one well, the Reno, is flowing 600 barrels daily, the others having amounted to nothing, or having been a disturbing influence for a few days only.

The report for December shows a slight increase in production, but a decrease in operations. The excessive production is in consequence of the prolonged flow of the Reno well. "With that well out," says the Oil City *Derrick*, "the production of the regions would be over 100 barrels daily less than in November."

The Schultz well, expected to come in some days since, still hangs over the market with the effect of holding back prices. Speculators do not seem inclined to buy heavily on the eve of the coming in of a possible gusher. Last Saturday the market was firm, and an advance of 5c. was recorded. This was due in large part to the December report, as suggested in BRADSTREET'S that morning. The report stated that there were 123 wells completed in December, with a production of 2,550 barrels per day, an average per well of 20¾ barrels, against 149 wells completed in November, with a production of 1,786 barrels, an average per well of 12 barrels. In this, however, are included the Reno and Grandin No. 1 wells. There are 139 wells drilling to-day, against 147 drilling at the end of November, and of rigs up and building 123, against 137.

Saturday's market opened at 88½c., advanced to 91½c., and closed at 91¼@91⅜c., against 86¼@86⅜c. on Friday evening. Tuesday was quieter, and no news was received. Prices opened at 93c., advanced to 94c., broke to 88½c. and closed at 88⅞c. bid. Wednesday's trading was easier, but the day showed a decline. The opening was at 89½c., the lowest was 85½c. and the close 85½@85⅝c. Thursday's market was steady. Prices opened at 85½c., dropped to 84¾c., reacted to 87½c. and closed at 85⅞@86c. The marked changes were all on rumors respecting the Schultz well, for which all hands have apparently been waiting.

The market for certificates of crude yesterday was steady and quiet, with a firm undertone. The Schultz well opening was not reported, but its coming in is expected at any moment. At the close priees were quoted 86⅞ bid, against 86¼ bid on Friday night last week.

Refined petroleum, case oil and crude in barrels all advanced ⅛@¼c. on Saturday, in sympathy with pipe-line certificates. These figures were maintained, but the market for the various products notably weakened. The closing prices of petroleum and petroleum products at New York last evening, as compared with those one week ago, were as follows:

	December 29.	*January 5.*
United pipe-line certificates	86¼@86⅜	86⅞ bid.
Refined oil, 110° test	7⅜	7⅜
Refined oil, 70° Abel test	7½	7½
Case oil, plain brands	10	10¼
Crude, in barrels, New York	6⅞@7⅜	7@7½
Naphtha, per gallon	6¾	6¾

The exports of petroleum for the week ending December 30 have decreased, being 9,528,323 gallons, against 10,108,360 gallons (crude equivalent) the week before. The total exports since January 1 were 612,113,350 gallons, against 621,785,516 gallons (crude equivalent) during a like period in 1881. This makes the exports in 1882 9,672,166 gallons less than those 1881.

NEW YORK CITY TOBACCO TRADE.

The last month of the year 1882, as regards western leaf, was characterized by considerable activity in this market, sales amounting to 17,335 hogsheads, of which 7,785 were for home consumption and 9,550 for export. The sales during the year were 60,480 hogsheads, of which 43,825 were for export and 16,655 for home consumption. Stock in warehouse December 30, 24,928 hogsheads; same time 1881, 43,457 hogsheads. Receipts in 1881, 88,748 hogsheads. The large sales last month almost entirely absorbed the stock of leaf suitable for export, as 8,000 hogsheads in warehouse have been sold for that purpose. The western markets are also reported to be depleted of old stock suitable for foreign trade. The new crop will have to be depended on for future supplies. This crop is large, but a good portion of it is light and flimsy. In cigar leaf something of a speculative movement set in during the last week of December. As the cigar trade is very dull and may so continue for months to come, the only way to account for the action of the investors is that they have great confidence in the future of the market, or that the holders, needing money, disposed of the stock at such low figures as to offer an inducement to speculators. The goods sold were chiefly 1880 Pennsylvania at 8@14c. The sales for the month were 2,350 cases 1880 Pennsylvania at 7@14c.; 250 cases 1880 Connecticut; 600 cases 1881 Connecticut at 13@30c.; 1,100 cases 1881 Ohio at 3¾@8c.; 350 cases 1881 Wisconsin at 7@19c. Sales during 1882 are estimated to have reached about 80,000 cases. The year just past was probably the most unsatisfactory ever experienced in the history of the seed-leaf trade. The demand for Havana tobacco has been fair, with sales of about 2,200 bales at firm prices. Sumatra leaf continued active, with sales of nearly 1,000 bales at figures ranging from $1.10 to $1.35. The repeal of the 10 per cent. *ad valorem* duty having gone into effect on January 1, 1883, it is expected that the lower price at which Sumatra leaf can now be sold will promote a largely increased demand. The importations continue to be heavy. American growers of and dealers in seed-leaf tobaccos have petitioned Congress to place a prohibitive duty of $1 a pound on Sumatra leaf, they claiming that it is working great and increasing injury to their industry. The cigar trade is stagnant, consequent upon tax reduction agitation and

overstocking. This city's production in December was 56,336,000 cigars, 12,458,000 less than in November, and 13,349,000 less than in December, 1881. The production for the year was 807,751,000, against 759,674,000 in 1881. Cigarettes fell off considerably, tax having been paid on 15,224,000, against 28,526,000 in November, and 20,526,000 in December, 1881. The production of the year was 354,626,000, against 312,586,000 in 1881. The tax question has also affected badly the trade in manutured tobacco.

OCEAN FREIGHTS.

The arrivals of vessels to charter have been very light. The absence of any special demand, except for petroleum, has, however, kept rates down in most lines. A heavy or pressing demand would doubtless have witnessed a decided squeeze. The market is firm and steady. Rates for petroleum vessels have been high, and in one or two instances of the order known as fancy. The week's business has, however, been light.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: The general jobbing trade is quiet and dull, but a hopeful feeling prevails for spring opening, especially in groceries. Manufacturing interest rather depressed.

From Boston, Mass.: The year opens quiet in boots and shoes, and there are practically no buyers in town. Shipments for the week to places outside of New England, 30,473 cases, against 24,658 cases the first week in 1882.

MIDDLE STATES.

From Philadelphia, Pa.: There is a better feeling in general trade circles. Business in most departments continues quiet, but is improving. In some lines there is already a marked improvement over the closing weeks of last year. The sales of wool, for example, show an increase from 450,000 pounds last week to 1,200,000 pounds. A good many of the local cotton and mixed-goods mills continue idle, but in other industrial branches there is more activity, and the general outlook is better. Cotton moves very slowly, owing to the depression in this branch of local production. The grains are more active on speculative account, but there is not much demand for export; the markets close stronger, the German floods affording a basis for a moderate advance in prices. Flour is moderately active for home consumption, but export trade is dull; the stock at the close of the year was 164,000 barrels. Provisions are dull and generally lower. Farm products are selling fairly, with little change in prices. Dairy produce is steady, but receipts of butter are increasing, and only fancy grades are wanted. Sugars are dull.

WESTERN STATES.

From Cincinnati, Ohio: But little animation marked the trade of the week. Prices in the main are unchanged. A feeling of satisfaction prevails over the results of the business for the year.

From Cleveland, Ohio: The arrival of the new year has not developed any special change from the previous week in the general business here. Jobbers and manufacturers are generally engaged in completing inventories and mapping out work for the spring business. The jobbers of groceries are having an active demand, and collections are only fair.

From Columbus, Ohio: The manufacturing industries, as a whole, do not appear very active, but business is generally quoted fair.

From Indianapolis, Ind.: Trade in all lines has been rather quiet during the past week, most houses taking account of stock. Trade for the past year has been satisfactory, but the profits have not been large, goods having been sold very close. However, the aggregate of the business is 15 to 20 per cent. larger than last year. Banks have been curtailing their discounts.

From Evansville, Ind.: The past week has been very quiet in business circles, and merchants are footing up last year's losses and gains. In most lines there has been a heavy fall and winter trade that made up the deficit of the early part of the season, and the result of the year's trade is very satisfactory. But a small portion of an exceptionally large crop has gone to market, owing to unsatisfactory prices and bad weather, hence a boom is expected in trade when the products of the farm begin to move freely. Country collections are said to be good, there being a general desire to get to a cash basis.

From Chicago, Ill.: Lumber quiet and weak; demand fair; prospect good for increased cut this year. Drugs and chemicals more active. Large demand for carrying grain and provisions, which rapidly accumulate. More money received from country than shipped; mercantile collections improving. Jobbers are confident that business is on a more healthy basis than at the opening last year. Provisions weaker, owing to increased receipts of hogs, export and domestic; consumptive demand for all cured products moderate; trade mainly on local speculative account. Wheat active and higher; larger speculation on local account; scarcely any outside demand; feverish. Corn active, higher; large speculation in No. 2; shipping demand for low grades heavier than ever before at this season.

From Peoria, Ill.: Trade at present slackened up. Many shipments on mail orders. A number of houses are putting more men on the road, and will extend their territory. The year's business of this city shows a marked increase over all preceding years.

From Detroit, Mich.: But little business generally is being done by jobbers. Country merchants, as a rule, are inventorying, paying taxes, interest, etc., and a general movement of trade is not looked for until about the middle of the month. Collections a little slower than usual, but fair for the season.

From Louisville, Ky.: The feeling in trade circles is steady and easy, and the merchandise movement seasonably light. Collections are reported on the average prompt. Grain steady, with small receipts. Whiskies slow and unchanged. Leaf tobacco quiet and firm; cotton dull and easier. Money in fair supply and brisk demand.

From St. Louis, Mo.: The cotton market continues very dull, though receipts are large. Provisions sell slowly and downward. All grains are in improved demand and advancing. Hogs are declining a little on account of unusually liberal receipts, but the market is very brisk and nearly everything sells. Cattle market also active, and receipts large. Money demand diminishing, and bank surpluses gaining.

From Burlington, Iowa: Trade confined principally to staples. Other lines quiet. There is a fair movement in grain and lumber.

From Minneapolis, Minn.: Weather extremely cold throughout the northwest, but no severe storms, and roads in good condition. Business generally light during the week. Only moderate deliveries of wheat by farmers; market firm; three cents advance at mills; receipts for the week 470,000 bushels. Shipments of flour 92,000 barrels; market steady. Reports from the interior are favorable for planting a largely increased acreage in wheat and other small grain the coming season. Lumber slow, but firmly held.

From Omaha, Neb.: All lines of trade, both retail and wholesale, are quiet.

CALIFORNIA.

From San Francisco, Cal.: Business is fairly active for the season. Trade is highly satisfactory. The clearing-house exchanges show an increase of $30,000,000 over the previous year. There have been copious rains in the southern counties, where fears of drouth have prevailed.

SOUTHERN STATES.

From Baltimore, Md.: General trade continued quiet the past week, and the only activity of any moment was displayed in the cotton and freight markets. The demand in the former was mostly from the spinners, and good mixed samples sold on the basis of 9¾c. Grain charters were quoted steady, and the inquiry was fair for sail vessels of convenient sizes. Steamers were also in demand. The transactions in the grain market were small. Receipts of southern wheat have been very light. The provision market is easy. Like other seaports, Baltimore has suffered a decline in exports and imports during the past year as compared with 1881, which is attributed to the failure of the grain crop. The decrease in grain exports was large, but it is thought will compare favorably with other large cities. The grain trade think they held their own, and anticipate a heavy volume of business the present year. Cotton exports increased 62,177 bales. Petroleum exports decreased 742,469 gallons of refined oil; increased 63,938 gallons of lubricating oil; and also increased 3,686 gallons of residuum. Tobacco decreased 8,036 hogsheads, 460 tierces, 163 barrels, 4,108 cases, 23,500 pounds of manufactured, and 1,628 hogsheads of stems. Wheat decreased 2,145,965 bushels; corn 14,639,719, and oats 6,017. Flour increased 20,132 barrels and 33,439 sacks, while meal decreased 7,137 barrels. The total value of foreign exports was $12,208,300 less than in 1881, and the value of foreign imports decreased $1,505,370. The imports of sugar decreased 3,339 hogsheads and 7,747 bags. Coffee decreased 6,458 bags, and molasses increased 4,000 hogsheads. The clearing house receipts fell off $46,325,951.18, while the receipts of the internal revenue collector increased $474,730.50.

From Norfolk, Va.: There has been very little change in the general outlook during the week. All departments of trade dull. Cotton is falling off in receipts; it is thought 65 per cent. of the crop has been marketed. The oyster business is now at its height, and a large yield is promised. Collections moderate.

From Richmond, Va.: General business fair and improving.

From Wilmington, N. C.: Weather cool and pleasant. Cotton receipts light, and market dull. Spirits turpentine quiet, and fair demand. Rosin firm and receipts large. Tar and crude turpentine steady. Freights—foreign dull; domestic quiet. Lumber, timber and shingles firm. Provisions and breadstuffs firm. Grain very firm.

From Savannah, Ga.: Business since the holidays quiet. Cotton market quiet. Rice steady at unchanged quotations. Naval stores in fair demand. Lumber quiet, with sufficient vessels here to meet demand for some days to come.

From Dallas, Tex.: All wholesale dealers report a falling off in business from last week. Grain receipts light and not equal to the demand.

From Nashville, Tenn.: General trade for the week has been very quiet. Provisions steady, with good demand. Country produce in good demand. Flour quiet, with moderate southern demand. Wheat firm; choice and fancy grades in good demand. Cattle receipts fair, with fair demand for good stock.

From Memphis, Tenn.: Trade in general has continued dull during the past week. Receipts of feedstuff hold up, and prices incline downward. Cornmeal dull. Flour steady, with liberal supply on hand. Meats are low. Receipts of live stock have been light for the past ten days, and prices are firm at satisfactory figures wholesale.

The following table, giving rates on prime commercial paper and exchange on New York at the cities named, is based on special dispatches to BRADSTREET'S, received yesterday:

	Prime com. paper, per cent.	*Exchange selling on New York.*
Atlanta, Ga	8 @10	¼ premium.
Augusta, Ga	8 @10	Par
Baltimore, Md	5 @ 6	Par@50c. premium.

THE SUPPLY AND CONSUMPTION OF COAL IN EUROPE.

The London *Engineer* prints the following information concerning the growth of the production of coal in Europe in the recent past, and the extent and sources of the present supply: "No official statistics are available to determine the exact figures of the yield of our coal mines in the early days of the present century. The Custom House returns of the year 1801, however, furnish some clue. It appears that the quantities of all coals shipped from the port of Sunderland were recorded in 1801 at 624,804 tons, and that Newcastle sent to ports at home and abroad during the same year 482,593 chaldrons. From these items it may be fairly assumed that the output at that period was somewhere near 1,500,000 tons. The yield of 1881 is estimated at 150,000,000 tons. This enormous increase has been in sympathy with the necessity of supplying the growing wants of all nations. But this very necessity has aroused the energy of other nations in and out of Europe. Concurrently with the increase in this country endeavors have been made in various directions to emulate British enterprise. We propose to show whether these attempts have been successful or not by briefly recording the results attained in the supply in the face of increased consumption.

"The importation of coal into Russian ports has grown from year to year, and the quantities thus imported have during the whole period been almost exclusively of British origin. In the year 1831 this country shipped to Russia 31,379 tons of coal; twenty-five years later, *i. e.*, in 1856, the export had reached 236,010 tons. These shipments included Russian ports in the Baltic and the Black sea. In another quarter of a century, 1881, the export to the same ports stands recorded at 1,395,400 tons. The progressive increase during the last twenty-five years occurs as follows:

	1856-60.	1861-65.	1866-70.	1871-75.	1876-80.
Tons	1,426,308	2,376,663	3,273,243	4,102,504	5,988,618

"The foregoing eloquently demonstrates the rapid progress attained in the Russian empire in the use of steam-power, for, concurrently with the increased consumption of British coal, the resources of the Russian mines have been gradually developed. For a very long time, in the absence of proper means of transportation, the riches of the earth remained undisturbed. The yield of Russian coal mines, we learn from official sources, was in the year 1870 confined to 817,000 tons. Since then the iron road has lent aid to a display of energy in the exploration of Russian coal mines. In the space of five years the yield had doubled, reaching, in 1875, 1,750,000 tons. The results of 1879-80 show that in ten years the output had increased threefold and more. There were 154,034,320 poods in 1879, and 178,238,000 poods in 1880. Expressed in English tons, the output stands as follows: 1879, 2,475,500 tons; 1880, 2,864,500 tons.

"Very little trustworthy information is obtainable to permit us to minutely enter into a narrative regarding the extent and working of Russian mines. The approximate estimate is that the coal regions situated in various parts of the empire embrace an aggregate of from 25,000 to 30,000 square miles. English coal is, for the most part, exported to the Baltic, while a minor portion goes to Odessa and adjacent ports. English contractors have been in the habit of supplying, among others, the Kharkoff Railway Company. The annual consumption of that road is stated as 42,000 tons, one-half thereof coming from England, the remainder being supplied by the Russian mines at Donetz. The latter have managed to supplant the English coal, considerably underselling the British merchants. These facts have been recorded. But under authority of her Majesty's consul at Odessa there is the following qualification: 'The Russian coal contains a very large proportion of sulphur, which tends to exercise a destructive influence on the boilers; moreover, they are liable to spontaneous combustion. Under the circumstances, therefore, it seems doubtful whether Russian coals prove virtually cheaper than English coals. Meanwhile, the most strenuous efforts are made in the construction of railways to open new avenues to reach the coal mines of the Donetz district, in view of dispensing, so far as possible, with coals from abroad."

"From first to last the Scandinavian countries have been faithful customers at our coaling ports. The exports, both to Sweden and Norway, have increased in the ratio of the development which various branches of industry have attained, and commensurate to the extension of modern means of communication on land and at sea. Except in the southern provinces of Sweden, where a small yield is obtainable, no coal mines are worked, of any importance, in the kingdom of Sweden and Norway.

The export of British coal during the period 1856 will be seen from the following summary of the number of tons shipped each quinquennial period:

	1856-60.	1861-65.	1866-70.	1871-75.	1876-80.
Tons...	1,466,593	1,990,100	2,628,935	4,241,266	5,873,339

"The inhabitants of Denmark are more given to agricultural pursuits, industrial establishments not being so numerous, as the consumption of coal is confined to domestic uses, in addition to the requirements of an extensive network of railways and the steamboats on which the Danish isles depend as a means of communication with the outer world. English coals have hitherto supplied, with few exceptions, the needs of Denmark. These supplies are summarized in the summary of twenty-five years' shipments, as follows:

	1856-60.	1861-65.	1866-70.	1871-75.	1876-80.
Tons....	2,211,442	2,320,259	2,989,032	3,295,002	3,904,707

"It has been playfully observed that, prior to the events of 1866-70, Germany had no "geographical existence." There was an agglomeration of a number of states, and there were coal mines in Saxony, in Silesia, in Bavaria, and in the provinces of Rhenish Prussia. They were tolerably prosperous in serving local purposes, but as a whole the enterprise remained in a state of infancy. The German empire, as at present constituted, has succeeded in attaining a rank among the councils of nations and greater vitality; in common with other improvements, the mining interests have been raised to a state of maturity. From a "Statistical Record" issued by the Imperial government, we learn that, while in the year 1856 the yield of German coal mines barely reached 9,000,000 tons, the output in 1870 had been equal to 23,316,238 tons, and the production has so far advanced as to show a yield of 48,000,000 tons for the year 1880. It is necessary to observe that, to a large extent, this expansion is due to the newly-acquired territories of Alsace and Lorraine, which formerly belonged to France. The activity displayed in the exploration of the German coal mines has not, however, so far affected the demand for English coal."

HAY AND ENSILAGE.

At a recent meeting of the London Chemical Society, says the London *Engineer*, Mr. Toms read a paper on "The Chemistry of Hay and Ensilage." The author had analyzed various samples of hay, and contrasted them with analyses of ensilage—*i. e.*, grass buried while green in a water-tight pit or "silo" and subjected to pressure. It is well known to chemists that hay-making is not a mere drying of grass, but that a fermentation also takes place, which develops the well-known perfume of hay, and during which the grass loses its green color. A specimen of good hay dried contained fatty matters, 2.17 per cent.; free acetic acid, 1.89; sugar, 3.42; starch, 12.46; gum and mucilage, 27.25. A specimen of brown hay from the same rick as the last, but from a portion of the stack which had heated, contained fatty matters, 4.26 per cent.; aldehyde, which formed a mirror with ammonia silver nitrate; free acetic acid, 5.38; sugar, 6.94; starch, 3.42; gum and mucilage, 24.77. More than two-thirds of the starch had thus disappeared, and apparently had been converted into sugar, etc. Three specimens of ensilage were analyzed: One differed very little from ordinary grass; the second was brown, and smelt strongly of tobacco; it contained more acetic acid and sugar, but less starch; the third specimen represented fodder which had been buried eighteen months; it still contained starch-sugar, but was not acid, but was moldy. Mr. O'Sullivan did not think that the author had proved the presence of starch in the hay or ensilage, because other substances, such as gum and mucilage, when boiled with dilute sulphuric acid, furnished euprie oxide reducing substances.

INDUSTRIAL ARBITRATION IN FRANCE.

The following is taken from the *Ironmonger* (London): "In this country the principles of arbitration and conciliation have made some progress of late years, and their application have been the means of preventing many threatened disputes of a serious nature. There is still, however, far too much uncertainty and looseness in the adoption of arbitration, as has been well illustrated on more than one occasion recently. In this respect they do "manage things better in France," inasmuch as in that country there are permanent courts for this purpose, styled *Conseils des Prudhommes*. These courts are government institutions, and exist all over the country. They may be appealed to by both masters and men on any question affecting wages, behavior, disputed indentures, or other points arising between employers and employés. Figures just issued show that the courts are very freely made use of, and that their influence is sound and healthy. It is shown that the number of the courts has increased from 62 in 1841 to 132 at the present time. With the greater number of courts has come a pro rata increase in the number of cases submitted to them. In 1880 there were altogether 39,429 cases heard, of which 73 per cent. were disposed of in 12 manufacturing centers. Paris, with four courts, had 16,757 cases; Lyons, 2,969; St. Etienne, 1,513; Roubaix, 1,414; Havre, 1,303; Bordeaux, 1,060; Lille, 812; Elbœuf, 737; Limoges, 782; Marseilles, 601; St. Quentin, 520; Besançon, 501; the total number heard in these towns being 28,899. Out of every 100 cases brought before the Court of Conciliation 59 relate to wages, 13 to dismissals, 10 to misbehavior, 5 to disputes about apprenticeship, and 13 to various other points. Of this large aggregate, it is stated about a fourth is withdrawn before the time of hearing arrives, conciliation being tried in all cases in order to induce the disputants to settle their differences without the intervention of the courts. Latterly these preliminary attempts have not been so successful as formerly, which would seem to show that the workmen or the employers of France are more stubbornly litigious than they were some years ago. At the same time, it is noted that of the cases sent up to the General Court something like three-fifths are settled amicably, so that, on the whole, the influence and procedure of these councils are beneficial to the industrial and manufacturing sections of the French public. The courts, it may be mentioned, have power to order imprisonment for three days as a penalty for grave breaches of discipline in workshops or factories, yet from 1810 to 1871 only nine such cases were recorded, and since 1871 there has not been a single instance of the kind. The punishment is one which the courts doubtless avoid as far as possible; still the total absence of any example for the long period of ten years speaks well for the behavior of the French workmen."

TRADE EMBARRASSMENTS.

There were 257 failures in the United States reported to BRADSTREET'S during the past week, 15 more than the preceding week, and 105 more than the corresponding week of last year. This is the largest number in any one week for the past two years. Compared with the previous week the middle states had 60, an increase of 11; New England states 46, an increase of 19; southern states 61, an increase of 8; western states 78, a decrease of 16; Pacific coast states and territories 12, a decrease of 7; Canada and the provinces 8, a decrease of 9. Among the important failures were U. H. Dudley & Co., brokers in canned goods; Brower & Leeds and John I. Brower & Son, hardware; Kerr & Smith, brewers; Zucca Brothers, wholesale fruits; James Miller, publisher, all of New York city. In the principal trades they were as follows: General traders 35; grocers 34; clothing 15; dry goods 15; fancy goods 14; liquors 12; jewelry 11; manufacturers 11; hardware 9; shoes 9; tobacco and cigars 7; produce and provisions 7; hotels and restaurants 7; drugs 7; millinery 6; butchers 6; gents' furnishing goods 5; furniture 4; hats 3; books 3; commission 3; millers 2; crockery 2; bakers and confectioners 2.

ALABAMA.

CLAYTON.—W. T. Harper, saloon, has failed and gone out of business.

GADSDEN.—W. H. Powers, general store, has been attached.

JACKSONVILLE.—B. F. Carpenter & Co., grocers, ask an extension.

JAMISON.—J. A. McNeil, grist mill, has been sold out by the sheriff.

MONTGOMERY.—Block & Strauss, clothing, have been attached.

TROY.—J. O. Brown, general store, has failed and sold out.

ARKANSAS.

EUREKA SPRINGS.—Ryan & Bolton, drugs, have not been attached, as previously reported.

HELENA.—The liabilities of Mrs. E. Bender, dry goods, who recently failed, are $24,000; actual assets about $12,800.

HELENA.—A. Goitein, saloon, has transferred his entire stock to the Bleyer Distillery Company of St. Louis for indebtedness.

HELENA.—Mrs. B. Washer, millinery, has been attached for $5,517.

CALIFORNIA.

AUBURN.—W. A. Jackson, general store, has been attached.

CHICO.—Farrell & Co., hardware, have been attached.

NEVADA CITY.—S. M. Shurtleff, formerly general store, has filed a petition in insolvency.

SAN FRANCISCO.—Burnham & Lynch (Oriental Tea Company) have filed a petition in insolvency. Liabilities $20,500; assets $10,878.

SAN FRANCISCO.—C. C. Burr & Co., manufacturers of mustard, have assigned.

SAN FRANCISCO.—H. S. Dawson, cattle dealer, has filed a petition in insolvency.

SAN FRANCISCO.—William Geistlich, gents' furnishing goods, has been attached.

SAN FRANCISCO.—J. Herspring, jewelry, has been sold out by the sheriff.

SAN FRANCISCO.—The liabilities of M. B. Lichtenstein & Co., wholesale jewelry, who were recently attached for $5,582, owe about $40,000, principally to eastern creditors. They are advertised to be sold out by the sheriff.

SAN FRANCISCO.—A. O'Beirne, butcher, is advertised to be sold out by the sheriff.

COLORADO.

BLACK HAWK.—John J. Hamillick, market, has been attached for $5,000.

COLORADO SPRINGS.—R. C. Luesley & Co., clothing, have been closed by the First National Bank.

DENVER.—Louis Rothgerber, pawnbroker, gave a chattel mortgage for $1,000, and the sheriff took possession.

DURANGO.—B. W. Thayer, clothing, asks an extension.

DAKOTA.

ALEXANDRIA.—Halverson & Matson, have assigned to A. Janes.

FARGO.—Quaw, King & Co., grocers, have assigned.

FARGO.—E. A. Kleve, drugs, has assigned.

DELAWARE.

MILFORD.—The liabilities of George M. Howell, fruit canning, are about $15,000, and it is said he expects to pay about 60 cents.

DISTRICT OF COLUMBIA.

WASHINGTON.—D. Silverberg, dollar store, has assigned.

GEORGIA.

ARLINGTON.—Boynton & Co., general store, have failed.

ARLINGTON.—N. W. Pace & Son, millers' carriages, have failed.

MACON.—J. G. Rushling, of Byington & Rushling, hotel, has assigned his interest.

MARIETTA.—M. F. Sullivan, grocer, has been closed by the sheriff.

SASSER.—Simpson & Simpson, general store, have failed.

WASHINGTON.—E. P. Tate, general store, has assigned. Liabilities $6,000; assets $2,000.

ILLINOIS.

BLOOMINGTON.—G. Bunn & Co., grocers, have assigned to W. H. Whitehead, on account of partnership difficulties.

BLOOMINGTON.—Jerry Foley, merchant tailor, has been closed by the sheriff on a judgment for $1,419.

BROCTON.—C. L. Bradford & Co., general store, have assigned.

CHICAGO.—Charles M. Frahm, clothing, confessed judgment for about $3,000, and was closed by the sheriff. Liabilities $28,144; nominal assets $21,500.

CHICAGO.—Sarah Kallen, notions, has been closed by the sheriff.

CHICAGO.—Elias Lederer, notions, has been closed by the sheriff.

CHICAGO.—Moritz Mendelsohn, gents' furnishing goods, has been closed by the sheriff, on a levy for $1,311.

CHICAGO.—Isaac Springer, jeweler, has been closed by the sheriff on a claim for $6,557.

GREENFIELD.—Charles Schnell, saloon, has been closed by the city authorities on an execution for selling liquor without a license.

LA SALLE.—The De Steiger Glass Company has suspended.

MASCOUTAH.—Eisel & Kohler, brewers, have assigned. Liabilities about $8,000; nominal assets $11,000.

PEORIA.—Bergthold & Meniel, showcase manufacturers, were closed on an execution for $45 and scheduled out.

ROCHESTER.—Hicks & Breckenridge, flour mill, have assigned. Liabilities $7,500; assets $6,000.

SPRINGFIELD.—Thomas Halligan, shoes, has been closed by the sheriff.

URBANA.—Mrs. M. E. Stokes, grocer, has failed and gone out of business.

INDIANA.

ANDERSON.—Isaac R. Conwell, shoes, has assigned.

ANGOLA.—Weicht & Gale, wagon manufacturers, have assigned.

FORT WAYNE.—George B. Irwin, millinery, has assigned. Liabilities reported at $25,000; assets about $10,000.

FORT WAYNE.—W. H. Pyke, grocer, has been closed by sheriff.

LAFAYETTE.—H. C. Kachlein, jeweler, has failed, and offers 50 cents. Liabilities $8,000.

NEW CASTLE.—W. S. Canaday, cigars, has assigned.

RICHMOND.—Ross Brothers, grocers, have failed.

TERRE HAUTE.—C. Thomas, jeweler, has assigned.

IOWA.

CEDAR FALLS.—John H. Fox, cigars, has assigned. Liabilities $757.

CLINTON.—G. C. Campbell, tobacco, has assigned. Liabilities about $1,200.

CLINTON.—P. B. Stouffer, drugs, has assigned. He previously gave a chattel mortgage for $2,500.

CORNING.—William G. Shortliff, clothing, mortgaged his stock for $4,800 and failed.

GREENVILLE.—David Schulein, clothing, has assigned. Liabilities $25,000; assets $14,500.

GRINNELL.—Mrs. M. J. Patton, millinery, has been closed on a chattel mortgage.

OTTUMWA.—E. H. Macoy, fancy goods, has assigned.

PACIFIC JUNCTION.—H. L. Wolf & Co., general store, have failed.

SALEM.—L. S. Breeze, shoes, has assigned.

KANSAS.

KINGMAN.—Karr & Willis, hardware, have failed.

ONAGA.—J. B. Hubbell & Son, dry goods, etc., have assigned. Liabilities $3,500; assets $2,500.

OSWEGO.—William L. Tryon & Co., saw mill, have failed.

THAYER.—Isaac Hopkins, dry goods, has assigned.

KENTUCKY.

FULTON.—J. W. Roberts, grocer, has been attached.

LEXINGTON.—W. A. Lilly, fruits, has been closed on a chattel mortgage for $453.

LOUISVILLE.—The Brannon-Justi Paper Company has assigned to J. P. Byrne.

LOUISIANA.

LAKE CHARLES.—H. C. Gill, general store, etc., has assigned. Liabilities $25,000.

NEW ORLEANS.—S. H. Seligman & Brother, jewelry, have assigned. Liabilities $20,057; assets $12,200.

NEW ORLEANS.—D. P. White, cotton gin, has assigned. Liabilities $12,624; assets $10,065.

MAINE.

ADDISON.—J. M. Johnson, general store, has gone into insolvency.

AUGUSTA.—Lewis S. Hill, grocer, has sold out to the mortgagee for $1,100. The mortgage was $725, and the balance was placed to the account of the creditors. Liabilities about $1,300.

BUCKSPORT.—Jesse Treat, grocer, has gone into insolvency.

HALLOWELL.—The Kennebec Wire Works have been attached.

MONSON.—H. B. Thayer, drugs, who was recently burnt out, is settling with creditors at 15 cents.

PORTLAND.—H. I. Nelson & Co., fancy goods, who recently assigned, owe $11,000; assets $6,500.

ROCKLAND.—Bird & Nutter, hotel, have been attached for $3,860.

MARYLAND.

BERLIN.—Dilworth, Mapes & Co., fruit packers, have been closed by the sheriff. They claimed to have $10,000 invested in plant.

CRISFIELD.—W. T. Riggin, general store, offers to compromise at 50 cents.

MASSACHUSETTS.

BOSTON.—C. F. Appleton & Curtis, shoes, have failed. Liabilities about $11,500; nominal assets $7,200; actual assets about $4,600. They offer 30 cents. Mr. Curtis was admitted only a few days before the failure, and was to contribute $5,000, but only $2,000 was furnished, and that by Mr. Curtis' father, who puts in a claim for the $2,000 as borrowed money.

BOSTON.—P. A. Burns, dry goods, offers 30 cents, and the committee of creditors decided on 33 1-3 cents.

BOSTON.—Henry L. Carter, hats and caps, has failed and offers 50 cents, which will probably be accepted.

BOSTON.—George A. Chaffin, 'gents' furnishing goods, has failed and gone into insolvency. The dividend will probably be very small. Liabilities about $11,425, of which $1,500 is secured by mortgage.

BOSTON.—Arthur J. Coburn, birds, failed, filed a petition in insolvency, and committed suicide.

BOSTON.—Spencer A. Corney, metals and paper stock, has suspended, having been, it is said, involved by the failure of E. H. Sampson & Son. He is reported to be an indorser for and creditor of the latter to the extent of $38,000.

BOSTON.—D. O. Goodrich & Co., fancy goods, have failed. Liabilities about $12,000; nominal assets $9,992. The creditors agreed to accept 40 cents.

BOSTON.—George Grant, hotel, has gone into insolvency. Liabilities $3,960; no assets.

BOSTON.—Frank D. Montgomery, broker, has failed and will settle in insolvency. Liabilities $2,870; assets small.

BOSTON.—E. H. Sampson & Son, leather boards, show liabilities $217,000, of which $86,000 is secured by mortgages and bill of sale. The unincumbered assets consist of stock, real estate at Needham, cash in bank, notes and accounts and horses and vehicles.

BOSTON.—L. Rockwell & Co., grocers, have failed, and it is thought will pay about 50 cents.

BOSTON.—Howard Vinal, grocer, has failed and offers 20 cents, which will probably be accepted. Liabilities $4,000; nominal assets $1,300

BROCKTON.—M. A. Caswell, dry goods, has failed and the store is closed.

CAMBRIDGEPORT.—Denyven & Couch, furniture, have failed. Liabilities about $4,000; assets $1,000.

COTTAGE CITY.—J. M. Tabor, groceries and dry goods, has failed. Liabilities $3,000; nominal assets $1,700. He offers 50 cents.

DALTON.—A. K. Cleaveland, meats, has filed a petition in insolvency.

GREAT BARRINGTON.—Frank S. Joyner, meats, has failed.

GREAT BARRINGTON.—Charles Myers, market, has been attached. Liabilities about $800.

GREAT BARRINGTON.—Eugene S. Thatcher, grocer, has been closed by the sheriff.

HAVERHILL.—Smith & Haseltine, fancy goods, have been sold out by the mortgagee and are closing up.

LAWRENCE.—The creditors of Frederick Schmidt, clothing, have filed a petition in insolvency against him. He was recently sold out by mortgagee.

LOWELL.—L. P. Folsom, dry goods, has failed. Liabilities $21,000; nominal assets $10,551.

LOWELL.—W. P. Hills, provisions, has been attached and has left town. The assets are small.

MEDWAY.—W. C. Bagley, hotel, has filed a petition in insolvency. Liabilities $3,112; nominal assets $700.

NATICK.—Charles E. Horseford, clothing, is reported to have failed. Liabilities about $4,000; assets about $1,000.

NATICK.—John Sweeney, liquors, has been closed by creditors.

NEWBURYPORT.—Charles Peabody, shoes, has filed a petition in insolvency. Liabilities $4,679; assets $150.

NORTH ADAMS.—Thomas Whalen, cigars, has been attached for $2,000. Liabilities $4,000; assets $1,555 He offers 25 cents.

PITTSFIELD.—A warrant in insolvency has been issued against Louis Kuhn, fish. Liabilities $2,000; assets $1,000.

SPRINGFIELD.—Hyde, Ayer & Co., patented novelties, have failed.

SPRINGFIELD.—Frank Hollister, furnishing goods, has been closed by the sheriff on three attachments for $9,000.

SPRINGFIELD.—The Springfield Glue & Emery Wheel Company has failed.

WATERTOWN.—The creditors of J. H. L. Coon, grocer, have agreed to accept 25 cents. Liabilities $4,951; nominal assets $1,800.

WORCESTER.—The creditors of Goldberg Brothers & Simmons, peddlers, have filed a petition in insolvency against them.

WORCESTER.—Henry Palmer, carpenter, has been attached.

WORCESTER.—The property of the Tournaphone Music Company has been seized under execution, and is advertised to be sold by the sheriff.

MICHIGAN.

BIG RAPIDS.—C. N. Chick, furniture, has assigned.

COLDWATER.—P. L. Preston, harness, has been closed by the sheriff.

DECATUR.—A. B. Osgood, jewelry, has been closed on a chattel mortgage.

DETROIT.—M. Rosenberger, clothing, has confessed judgment for $3,568 to Louis Kuttnauer.

GRAND RAPIDS.—D. E. Wenger, fair store, has assigned.

HOPKINS.—H. Rogers, general store, has been closed on a chattel mortgage.

LANSING.—Israel Glicman, dry goods and millinery, has assigned to W. I. Lattimer.

MINNESOTA.

FULDA.—G. A. Stevenson & Brother, drugs, sold out to G. H. Booth, a preferred creditor, for purchase money. They propose to settle as fast as they can collect money.

MISSISSIPPI.

CANTON.—Miss L. Emmich, general store, has been attached. Liabilities $4,000.

GREENVILLE.—M. Wachsman, general store, has sold out to some of his creditors and was attached.

JACKSON.—J. A. Loeb, general store, has assigned.

YAZOO CITY.—W. Z. McCracken & Son, general store, have been attached.

MISSOURI.

CARTHAGE.—Olcott & Armstrong, hardware, have assigned.

RICH HILL.—W. T. Sick, hardware, has assigned.

RICHMOND.—Edward C. Ridgell, grocer, has failed and sold out. Liabilities $934; actual assets $300.

ST. LOUIS.—John A. Herold, tobacco, has failed and offers 33 cents.

ST. LOUIS.—The Hickman Trunk Manufacturing Company has assigned. Assets $24,000. The capital was $20,000.

ST. LOUIS.—Weinert & Co., grocers, have assigned. Assets $2,500.

NEBRASKA.

LINCOLN.—Lichty & Swank, grocers, have assigned.

McCOOK.—B. Churchill, hotel, has failed.

PALMYRA.—A. Foster, confectioner, has failed.

NEW HAMPSHIRE.

CLAREMONT.—Albert Rossiter, treasurer of the Sullivan Savings Bank, has failed, with large liabilities. It is said the bank will not be affected.

NEW IPSWICH.—John G. Adams, grocer, has been attached.

NEW JERSEY.

MONT CLAIR.—Hugh Gallagher, flour and feed, is reported to have called a meeting of his creditors.

NEWARK.—J. H. Marren, crockery, has assigned.

NEW YORK.

ALBANY.—Jacob H. Roseboom, tinware, has assigned to George W. Albright.

AUBURN.—W. F. O'Connor, oysters, has been closed by the sheriff.

BATH.—Lee Schwartz, dry goods, has assigned to Erastus P. Higgins, giving preferences to Frank Campbell $1,672; First National Bank $5,200; Fabian Schwartz $1,000; total $7,872.

BINGHAMTON.—Frederick C. Morris, drugs, has been closed by the sheriff.

BROOKLYN.—Henry Levy, tailor, has assigned to Joseph Harris, giving preferences for $1,200.

BUFFALO.—John H. Davis, trading as Davis & Co., wholesale gents' furnishing goods, has assigned to Theodore A. Arend.

BUFFALO.—The schedules of Isaac & John A. Holloway, contractors, show liabilities $102,504; assets $52,891. The individual liabilities of Isaac Holloway are $128,210; assets $154,240.

BUFFALO.—Charles Lehman, shoes, has assigned to William M. Hawkins.

BUFFALO.—William Wright, millinery, is reported embarrassed, and will compromise at 25 cents. If this is not accepted he will assign. Liabilities for merchandise $9,000; nominal assets $11,000.

CATTARAUGUS.—Babb & Meyers, manufacturers of cigars, who recently sold out to L. E. Babb, have been attached by several creditors.

CHATEAUGAY.—Mrs. J. H. Stoughton, millinery, claims she will be unable to meet her obligations, on account of the robbery of a large portion of her stock.

EAST SYRACUSE.—Rice Smith, grocer, has assigned.

GASPORT.—Gibson & Purser, millers, have assigned to John Lampert.

GENEVA.—The schedules of M. S. Liberman, clothing, show liabilities $13,000; nominal assets $9,600; actual assets $6,900.

HAVERSTRAW.—Joshua Penny, grocer, have assigned to Ira J. Hunter. Liabilities about $2,500; actual assets about $1,500; preferred claims $1,400.

LOCKPORT.—G. W. Glassford, music, has assigned to O. E. Moody.

NEW YORK CITY.—Boetlicher & Kauer, manufacturers of trimmings, offer to compromise at 20 cents. Liabilities $2,500. Subsequently they assigned to Fred. C. Steffen.

NEW YORK CITY.—Brower & Leeds, hardware manufacturers' agents, assigned on the 30th ult., and John Brower, the senior partner, who also traded under the style of John I. Brower & Son, wholesale hardware, made an assignment of the latter, both to Belding S. Pembleton, giving preferences for $4,782—to Samuel L. Beckley $2,500; D. W. & J. D. Clark $500; James Surget $1,782. The business was done almost entirely through Brower & Leeds, and they have been reported slow in payments for several months past. The firm think they will ask an extension, and claim to be solvent. The business was started about fifty-seven years ago by the late John I. Brower, who was supposed to have left an estate valued at $300,000.

NEW YORK CITY.—A. Brown & Co., commission merchants, assigned on the 2d inst. to Louis G. Cassidy, giving preferences for $3,094.

NEW YORK CITY.—Rodney Chipp, stationer, assigned on the 2d inst. to Herbert C. Whitney, giving a preference for $500. Liabilities $4,237; nominal assets $2,973; actual assets $1,933.

NEW YORK CITY.—Jacob Delmonte, wholesale tobacco, assigned on the 30th ult. to Henry Alexander, giving preferences for borrowed money to C. Welles & Brother $3,000; German Exchange National Bank $349.

NEW YORK CITY.—Alfred W. Dennett, eating-house, assigned on the 4th inst. to James Dowling. Liabilities $2,966; nominal assets $3,500.

NEW YORK CITY.—James A. Dolan, grocer, assigned on the 5th inst. to John Burlinson, giving preferences to John Burlinson $5,575; Lucy A. Dolan $300; M. A. & M. F. Dolan $2,000; total $7,875.

NEW YORK CITY.—U. H. Dudley & Co., brokers in canned goods, assigned on the 30th ult. to Sands F. Randall. The failure is attributed to overtrading and depreciation. They were formerly in the packing business, having a large trade, with branches in several western cities. They became overstocked in St. Louis in December, 1881, and endeavored to work off their stock. Last February they changed their mode of business, abandoned the branches, and continued as brokers.

NEW YORK CITY.—Caroline Fisher, manufacturer of trimmings, assigned on the 3d inst. to Mitchell Hershfield, giving a preference to Adolph Wimpfheim $1,094.

NEW YORK CITY.—Richard Foley, dry goods, assigned on the 4th inst. to James C. Allen, giving a preference for $439.

NEW YORK CITY.—The schedules of George W. Harlan & Co., book publishers, show liabilities $16,086; nominal assets $12,941; actual assets $5,784.

NEW YORK CITY.—Lewis Jacobs, dry goods, assigned on the 2d inst., giving three preferences for $533.

NEW YORK CITY.—Kerr & Smith, lager brewers, assigned on the 5th inst. to Rowland F. Hill, giving preferences to Adam H. and Adelina Burr, executors, $3,000; Thomas B. Kerr $7,000; F. E. Bean $175; Department of Public Works $559; employes $900; total $11,634. They brewed about 17,000 barrels yearly. Mrs. Emily W. Kerr, the senior partner, was the widow of the late Hamilton R. Kerr, the capitalist of the business, who was supposed to have left an estate valued at $200,000.

NEW YORK CITY.—The schedules of Lear Brothers, manufacturers of cigars, show liabilities $20,624; nominal assets $19,566; actual assets $7,794.

NEW YORK CITY.—Constantine Lucius, jeweler, assigned on the 4th inst. to August Bergstein, giving seven preferences for $8,270, of which the largest were to Louis Arcularius $1,000 for borrowed money, and Alling & Co. $6,800 for merchandise. Liabilities $9,441; nominal assets $7,801; actual assets $3,536.

NEW YORK CITY.—Ludwig Laux, wholesale provisions, assigned on the 2d inst. to Frederick Hoch. Liabilities $17,000; assets $12,000.

NEW YORK CITY.—Samuel Meyer, furniture, assigned on the 5th inst. to Jacob Levi, giving preferences to Josephine Michaels $3,000; Sarah Weinschenck $250. Liabilities about $7,000; assets $3,000.

NEW YORK CITY.—James Miller, book publisher, assigned on the 4th inst. to Thomas R. Knox, giving preferences to C. A. Miller $300; T. R. Knox $413; S. Miller $541; George H. Sisson $199; J. F. Ames $100; A. Masterton $12,000.

NEW YORK CITY.—The schedules of Sarah Newburg, dry goods, show liabilities $4,431; nominal assets $2,339; actual assets $2,072.

NEW YORK CITY.—Antonie Schnurer, fancy goods, assigned on the 2d inst. to Max S. Korn, giving two preferences for $1,115.

NEW YORK CITY.—Nelson M. Shepard, jewelry, assigned on the 2d inst. to Benjamin Lumbey, giving three preferences for $5,894, of which $4,633 is to Abbie M. Shepard. Bad business and bad debts, the assignee says, was the cause of the failure. The liabilities are about $25,000.

NEW YORK CITY.—The receiver's report of The Globe Rubber Company shows liabilities, exclusive of capital stock, $144,018; good assets $122,350.

NEW YORK CITY.—Rickerson M. Tripp, wholesale jewelry, assigned on the 2d inst. to George A. Wells, giving sixty-four preferences aggregating $15,557, of which the largest were to T. J. Smith & Co. $3,955; M. Fitzgerald & Co. $1,266; Capron & Co. $1,355. The preferences were for merchandise, borrowed money and promissory notes. Mr. Tripp obtained a compromise last May at 50 cents, payable in three, six, nine and twelve months, on liabilities of $35,000.

NEW YORK CITY.—F. N. White & Co., toy wagons, assigned on the 2d inst. to Augustus A. Levey, giving six preferences for $3,062, mainly for borrowed money and promissory notes. They claim they were involved by the failure of Harwood & Beckwith, with whom they exchanged notes, and had to pay these to the amount of several thousand dollars. The liabilities are about $10,000; nominal assets about the same.

NEW YORK CITY.—Zucca Brothers, wholesale fruits, assigned on the 5th inst. to Louis Contencin, giving preferences to Virginia Zucca $2,000; F. P. Robinson $10,000; Hills Brothers $16,500; A. Minaldo & Co $8,000; total $36,500.

NORTH HARPERSFIELD.—John F. Bedford, general store, has assigned to his wife. Liabilities about $3,000; preferences $800.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 13, 1883.

NOTES OF THE WEEK.

A close analysis of the return of mercantile failures in the United States for the last quarter of the year shows that of the 2,328 traders reported failed, 731 were of no financial standing worth taking into account; 451 had only an estimated capital of $500 and under involved; 192 had a capital involved varying from $500 to $1,000; 237 had an estimated worth of from $1,000 to $2,000; 208 from $2,000 to $3,000; 185 from $3,000 to $5,000. It is thus seen that of the total disasters for the quarter 2,004, or nearly 86 per cent., were of traders having merely a very ordinary standing, or none whatever, in their respective trading communities. Of the remaining 324 failing traders, 144 had a capital involved varying from $5,000 to $10,000; 97 from $10,000 to $20,000; 40 from $20,000 to $35,000; 17 from $35,000 to $50,000; 9 from $50,000 to $75,000; 6 from $75,000 to $100,000; 5 from $100,000 to $150,000, and 6 having a capital at risk varying from $150,000 to $350,000. It is thus seen how largely the failures for the quarter were of small tradesmen having little or no financial standing. The failures reported to BRADSTREET'S for the week ending yesterday number 342. Of these 47 per cent., or 163, were of traders having no standing worth mentioning. Out of the 342 failing traders 307 had each but $5,000, or less, at risk. During the corresponding week last year 203 failures were reported. Of these 53 per cent., or 109, were of traders having no commercial standing. Of the 203 failing traders in the second week of last January 181 had each at risk a capital of $5,000 and under. It is thus seen that, while the number of failures correctly reported are in excess of the return for the corresponding period last year, the percentage of small traders continues very large.

There has virtually been no business on the Stock Exchange during the past week. Transactions have dwindled daily, as the shuffling of stock backward and forward between the same parties has been found to fail in inducing purchasers to come in. The commission houses are doing next to nothing. Of public buying there may be said to be none. A bull movement in the market is predicted by a combination of operators who have been dubbed "the reformed bears," from their antecedents; and they are doing their best to bring one about. Neither Mr. Gould nor Mr. Keene, however, is said to take any part in it, being either coldly indifferent or actively hostile. Meantime there is a deadlock in the market. It would be worth something to the prophet who could accurately forecast in which direction it would break.

Our correspondent at Washington sets forth elsewhere the state of opinion in and about Congress regarding the state of the census work and the need of further appropriations at an early day with which to carry on the project. Regarding the responsibility for the exaggerated character of the census work, the fact should be noted that, while General Walker is to be held primarily responsible, the blame, so far as there exists any blame, is to be divided with large numbers of congressmen who favored a big plan. The need of the hour in relation to the completion of the census work is the adoption of and adherence to some well-defined, direct course as the way out of the difficulty.

The friends of the Bankruptcy bill have reason to be very much discouraged by the action of the Senate this week. After repeated efforts, and with a great deal of difficulty, Mr. Hoar, who was charged with the management of the bill, succeeded in having the measure assigned to the advantageous position of unfinished business. From time to time the bill has been laid aside for matters of apparently more pressing importance at the moment, but the bill has only been informally laid aside, retaining its advantage as unfinished business. This advantage it has now lost. The Bankruptcy bill was set for 1 o'clock in the afternoon of Wednesday. The Tariff bill was set for 2 o'clock of the same day. It was not of course to be expected that the Tariff would give way to the Bankruptcy bill, but it had been expected that the Bankruptcy bill would be only informally laid aside, and that it would not lose its "coigne of vantage" as unfinished business. Unanimous consent was necessary to secure such an arrangement. The most determined opponents of the bill did not object, but Mr. Blair, of New Hampshire, who has some pet notions as to an educational bill, which was also displaced, said that he did not propose to have the Bankruptcy bill have any advantages which his own bill could not have, and he objected. Owing to this dog-in-the-manger policy the Bankruptcy bill has been robbed of its advantage. It remains to be seen whether its friends will have strength enough to restore it to the same position of advantage when the Tariff Commission bill shall have been disposed of. This seems very doubtful. The appropriation bills will then be pressing, and the weeks of the session which will remain will be few. It is to be feared that the Bankruptcy bill has thus received a blow from which it will be difficult for it to recover.

It is understood that the preliminary negotiations relative to the proposed reciprocity treaty with Mexico are now in an advanced stage. Indeed, they have so far proceeded that a draft of the intended provisions is in the hands of the Senate Committee on Foreign Relations. The progress made has been much more rapid than previous experience of the tedious methods of diplomacy would warrant us in expecting. This is a hopeful sign, and perhaps may be taken as an indication that the more intelligent citizens of both republics are dissatisfied with the present ill-adjusted commercial relations between them, and are willing, not so say anxious, to see a more acceptable system introduced. In regard to the details of the provisions agreed upon by the commissioners it is, of course, too early to speak as yet, such reports as have been promulgated concerning them being unofficial. It remains to be seen, too, whether the draft of the treaty will be satisfactory to the United States. It is assumed that it meets the approval of the Mexican government, Señor Romero, it is said, having already presented it to the authorities of the sister republic for consideration, and having succeeded in overcoming many objections at first urged against it.

The question whether telegraph wires shall continue to be run on poles, as is now done in the city of New York, or shall be conducted through pipes underground, as is the case in certain European cities, is beginning to attract attention. The relative advantages and disadvantages of both methods have been heretofore pointed out in BRADSTREET'S, and the difficulties connected with the early preparation of insulating material, but which have been nearly all obviated by a later experience, remarked upon. In a letter from our correspondent at Berlin, more than three months ago, a description was given of the methods of operating the underground cables in Berlin and London. As an appendix to the letter, it will be remembered, we printed a communication from the director of the Imperial German Posts and Telegraphs to our correspondent, in which he stated, in response to an inquiry, that the underground telegraph lines constructed for the German telegraphic service had in every respect answered the expectations of the government. We are glad to notice that the New York *Journal of Commerce*, *Times* and *Sun* have in turn given their attention to the subject, and have urged the establishment of the underground system. That the question is likely very soon to become a practical one in the city of New York is apparent from the fact that during the week the board of aldermen received a communication from the president of a company, organized for the purpose of constructing underground cables, requesting permission to lay its lines of wires beneath the streets, and declaring that, upon being granted the required permission, it will be prepared to furnish to all companies alike, and on equal terms, the necessary wires underground.

The finances of Brooklyn appear to be in a satisfactory condition. According to Mayor Low's message the outstanding obligations of the city have slightly decreased and the sinking fund has considerably increased. For many years past, the mayor says, it has been the custom to some extent to use moneys raised for the ensuing year to pay bills of the year just ending. Notwithstanding the issue of obligations to a large amount for new work, not only has the debt of the city been reduced during the year just closed, but the municipality has ceased to borrow ahead, the outstanding bonds and tax certificates have been reduced, and the city has paid its way as though there was no deficiency in collecting the tax levy. These gratifying results are attributed to the large collection of arrears in 1881 and 1882. The mayor says that the greater part of the annual interest charge upon the bridge bonds have been paid with the interest of bonds. This method of financiering, he says, while it has much to commend it as a means of concealing from the citizens what the bridge would cost to carry, cannot be easily justified as a plan to be followed in connection with the construction of great public works, and he adds that delays would not have been readily tolerated had the citizens felt at all times the burden of the enterprise. Mayor Low's views upon this point are eminently sound; it is much to be regretted in the interest of taxpayers everywhere that the philosophy he embraces has not found more followers among those charged with the administration of public, and especially of municipal, affairs.

INSURANCE PROFIT AND LOSS.

With this issue of BRADSTREET'S we present a compilation of figures of underwriting experience which are much more fertile of suggestion than attractive in appearance. Only companies legally authorized to operate in the state of New York are covered, not because entrance into that state is a warrant for the standing of an outside company, but because the bulkiness of the matter compels drawing a line somewhere and the best companies undoubtedly enter that state, although there are some good agency companies, and many good local ones, which do not. The year 1882 is ended, but it will be some weeks yet before even fragmentary returns covering the entire year can be procured, and even those will not be official; the figures given for 1882 are, therefore, those for the first six months only, yet the conclusion is warrantable that the result for the year, the improvement of one company being offset by the still more unfortunate experience of another in the second half of the year, will not materially vary in net results from those of the first half. The figures for that first half are, of course, compiled from the semi-annual department chart, and it is worth noting here, as a curious illustration of the practical value of state supervision over insurance, that the figures for the year 1881 were necessarily compiled from the department chart issued in the early part of 1882, for the reason that the regular annual report for 1881, apparently by the fault of the "state printer," was not issued until the middle of December. This volume has not for some years appeared very promptly, but the latest date heretofore which we recall is August; the report for the year 1881, however, came to light just as 1882 was drawing to a close.

A few companies—some of comparative insignificance, and some European companies of recent origin or not having been long enough in this country to afford room for comparisons—are omitted. Since the work of compilation began four companies have retired from the field entirely, and additional retirements may be expected soon. In cases where the term covered is shorter than the rule, the particular company is either younger than the rest or entered the state in the earliest year given; in such case, the exceptionally favorable result shown for the earliest year will be understood, and will not be credited to either exceptional good fortune or good management.

It cannot be too often pointed out that comparisons must cover a considerable term in order to escape being dangerously misleading. Fire underwriting has its comparatively fat years, and its positively, as well as comparatively, lean ones; to compare a lately past year with its immediate predecessor is, therefore, hazardous; but a term of three and a half years is long enough to form reasonable conclusions—at least as to the matter at present most pertinent and important, the drift the business is in at the time. To compare two consecutive years with each other fairly, losses incurred might perhaps be better taken than losses paid, and certainly losses incurred could not properly be left out of consideration, because incurred losses may largely go over to a succeeding year and heavy losses have not infrequently come in to disappoint at nearly the close of a year; yet, over a series of years, losses paid and losses incurred may be supposed to fairly well equalize themselves.

Growth in assets and surplus is sometimes cited to break the force of assertions that business is bad, and of statistics to sustain those assertions; yet this growth, even in surplus, may be inconclusive. Surplus may grow in the face of an unprofitable business record, because the market value of assets may rise, and because (when one year is compared with the next) the changes in unsettled losses and unearned premiums may influence such growth.

The tables given were more than double this size, as first prepared. The eight columns were originally twenty, and they were carried two years further back; but what are known as "printers' reasons" compelled reduction of bulk. Part of the omitted matter covered assets and surplus; another gave dividends, and showed how far dividends paid came from the profits of the underwriting business. Every company may be regarded as uniting two characters: one, a financial corporation having interest-earning property; the other, an executive department, which issues policies of insurance at fixed (more accurately in practice at almost anything but fixed) premium rates, and attempts—*out of those premiums, less working expenses*—to pay losses incurred. These two characters blend and lap largely, in fact; the interest earnings of the financial corporation frequently cover deficits in the underwriting branch, and the surplus receipts of the latter, more or less, are drawn on to pay dividends to the stockholders who stand behind both. Should dividends be more than interest earnings, or less? This question cannot properly be answered in a word, for it requires analysis and qualification. Stockholders stand, as to the holders of policies, as guarantors behind the underwriting branch; yet it is evident that stockholders do not exist for the purpose of standing in a guarantee capacity, nor in order that so necessary a thing as insurance may be practicable. Stockholders exist for dividends, and they can be, in the long run, kept in existence only by dividends. If the underwriting branch contributes nothing to the interest-fund, the business is poor, and it will slough off the weakest companies until reaction sets in. If the financial corporation gets nothing from the underwriting branch, it may better lop off the latter and stand on its invested property alone. Hence dividends ought to be more than interest earnings, for the contrary implies poor business; on the other hand, interest, plus underwriting profits, ought to be more than dividends, because only in that case are stockholders well taken care of and strength increased at the same time.

The figures given for the foreign companies cover only operations in the United States, or those of "the American branch." As respects the relation between gross income and gross outgo, these foreign branches have an apparent advantage—which should not be overlooked—in comparison with the rest, in the fact that no dividends paid on stock are in their reported outgoes, while interest on property owned and physically present in this country is included in gross income. Marine and mutual companies are not included. Fire and marine premiums and outgoes are not separated, although about forty companies out of the total number write marine and inland risks, and two or three companies do so heavily. The figures given exhibit premiums, losses paid, expenses paid, with their remainder or deficit, and their ratios to premiums, also gross income and outgoes; the latter add to the former interest receipts and dividends paid, respectively. There is an unfairness—or, rather, a lapse from strict accuracy—in charging all the operating expenses to the underwriting branch, in that this includes the cost of managing the invested property of the financial half, as well as the taxes paid thereon, which are by no means trivial. To get this separation strictly correct, however, would require dividing the taxes, and apportioning to the underwriting branch only those levied on premiums and insurance operations, leaving those on property owned for the other; this would be impracticable, from the returns as made up, and the error is probably as fair for one company as another.

The following shows the number of companies which "lost money"—that is, those which paid out for losses and expenses more than they received in premiums—during the term covered:

	1882, *first half.*	1881.	1880.	1879.
New York state companies	44	25	25	39
Other-states companies	33	15	15	15
Foreign companies	17	4	3	5

	1882 *and* 1881.	1882, 1881 *and* 1880.	1882, 1881, 1880 *and* 1879.
New York state companies	25	17	9
Other-states companies	13	7	6
Foreign companies	4	2	1

The following shows the excess or deficit of premiums as compared with losses and expenses in the classes of companies taken together:

1882—Excess of premiums	....	....	....
Deficit of premiums	$814,162	$872,442	$499,324
1881—Excess of premiums	1,216,865	1,937,298	1,366,845
Deficit of premiums	....	....	....
1880—Excess of premiums	1,243,484	1,673,327	1,884,595
Deficit of premiums	....	....	....
1879—Excess of premiums	....	893,193	727,807
Deficit of premiums	87,454	....	....

Of course, the crucial test is to be found in the columns which show the relation between insurance income and insurance outgo. In those are shown the practical results of the business done, as well as the odious comparisons—such as every one ought to make—between companies. These figures speak their own lesson, and for the present we leave them to do so.

THE NEW YORK RAILWAY COMMISSION.

Governor Cleveland, of New York state, has appointed three commissioners, under the act of June 16, 1882, to create a board of railroad commissioners. The commissioners named are as follows: William E. Rogers, John D. Kernan, and John O'Donnell. It is unnecessary to dwell upon the personal characteristics of these men at this juncture. It is of more importance to bring together the exact terms of the measure under which they are to look after railway operations within the state of New York. The commissioners are appointed by the Governor, by and with the consent of the state Senate. They are to hold office respectively for three, four and five years. It was provided in the act that two of the three commissioners should be selected, one each from the two recognized political parties, the third commissioner to be recommended by the trade associations of New York city. Mr. O'Donnell is the commissioner selected as last indicated. Any commissioner may be suspended by the Governor upon written charges preferred, but his action must subsequently receive the approval of the Senate. The principal office of the commission is to be at Albany, but branch offices may be established at New York and at Buffalo if in the judgment of the commission such offices shall be deemed necessary. Any two of the commissioners are to constitute a quorum. It is provided that investigations may be conducted by a single commissioner, if so directed by the board. It is laid down that the commissioners shall have the general supervision of all railroads, so far as necessary to enable them to perform the duties and exercise the power imposed and conferred by law, and "shall examine the same * * * with reference to the security and accommodation of the public and the compliance of the several corporations with the provisions of their charters and the laws of the state." It shall be the duty of the board to investigate the causes of any accident on a railroad; and it shall be the duty of the managers of each railroad in the state to inform the board of any such accident immediately after its occurrence. The act further provides that such commissioners "shall have power, for the purposes provided for in this act, to examine the books and affairs of any railroad company or corporation, or to compel the production of copies of books and papers, subpœna witnesses, administer oaths to them, and compel their attendance and examination, as though such subpœna had issued from a court of record of this state." Further, the board shall "have power to require copies of books and papers, or abstracts thereof, as provided for, * * * to be sent to them to any part of the state." Section 5 provides that whenever, in the judgment of the commissioners, any railway corporation shall have in any way brought itself under the ban of law it shall be their duty to report the same to the Attorney-General if the "violation or neglect" is continued after notice. The Attorney-General shall "protect the public interests" by "such proceedings as may be necessary." With respect to terminal facilities and rates of fare it is provided that the commissioners shall, whenever in their judgment changes reasonable and expedient are required in order to promote the security, convenience and accommodation of the public (after giving the offending corporation a hearing, without getting convincing proof that no action is required), present the facts in the case to the Attorney-General for his consideration and action, and shall also report the same facts to the legislature. It does not appear from this that the board is clothed with power to prescribe rates of freight. Section 7 provides that the railroad companies shall at all times, on request, furnish any necessary information concerning rates of fare, etc., and that the corporations shall "at all times, on request, furnish * * * copies of all contracts and agreements, leases or other engagements * * * entered into with any person or persons, corporation or corporations." The refusal to furnish "any statement or report required by said commissioners, in their judgment necessary to the purposes of the act, is to constitute a misdemeanor." Section 10 provides that the board shall have power to prescribe the form of report required from railway corporations under existing laws. The annual salary of each commissioner is fixed by the act at $8,000. The total expenses of the commissioners are to be borne by the railroads proportionally. The 14th section provides that the commissioners shall have the right, in the performance of their official duties, "to enter and remain during business hours in the cars, offices and depots, and upon the railroads of any railroad company within the state." Neither the commissioners nor their subordinates are to request favors of any sort

from the companies. The violation of this proviso is to be treated as a misdemeanor. The revealing by any commissioner of any information gained from one railroad company to any other company or person is to be treated as a misdemeanor.

Such are the provisions of the act under which the New York railroad commissioners are to begin operations. The powers conferred appear to be sufficient for full investigation into railway accounting and for compelling publicity so far as may be required. The true corrective of corporation abuses is the coercive influence of an informed public opinion. There is good reason for believing that under the publicity consequent upon the late investigation by the special committee of the New York legislature much of the abuses in the way of discriminating rates by the New York Central and Erie railroads has been done away with. It is to be hoped that the commissioners will not dwell in their work upon intricate problems as to through freight rates. The truth is that the railway rate problem, in the wider sense, has to be settled every year. An important and sometimes controlling element now in the so-called freight-rate problem is the size of the Indian wheat crop and the freight rates on the Indian railways. As we have previously pointed out, when India has a cheap transportation question, the United States have at hand, of necessity, a need of cheaper transportation. The true railway question of the day in the United States relates to the prevalence of corporate abuses in the matter of earnings, reports, etc. But these evils cannot be corrected by statutory decrees alone. A higher morale concerning corporation management must intervene. At present men do not hesitate at doing things as railway managers, such as the falsifying of accounts to affect the stock market, which they would shrink from doing as merchants in the dry goods district of New York city. So far has this been carried that to-day a deep distrust on the part of the public exists in respect to all operations centering in Wall street. Those who do not look beneath the surface suppose that the immediate operations of the Stock Exchange are at fault, whereas, with the exception of a few roads working under national charters, the abuses are incident to the direction of railway companies which are the creatures of this or that state. It is to be hoped that the New York railroad commission will be effective for good.

THE RIVER AND HARBOR QUESTION.

As our readers are aware, BRADSTREET'S has not used toward river and harbor legislation, generally, that tone of undiscriminating hostility so largely indulged in by the press, especially since the passage over the President's veto of the act of August last. We have believed, or preferred to believe, that while, upon full investigation, many improper items would be found in the acts, the greater number were justifiable, and the appropriations therefor, upon the whole, well spent. In the composition of a bill made up of individual and disconnected items in geographical distribution coterminous with the frontiers of the country, it was, in our judgment, impossible for any one man, without great labor, to make himself familiar with the conditions of every locality, or to form a just judgment of the relation of each to the general weal. We have believed that the members of Congress, and in especial the Commerce Committee, while probably conceding something to the securing of needful votes for the bill, have, in the main, been actuated by no improper motives. It has been, and still is, our belief that had the Commerce Committee first laid down and then prefaced their bill with a full explanation of the rules by which they were guided in the admission or rejection of particular items, much misconstruction would have been avoided and unjust abuse been spared. It seemed to be too readily accepted that the veto was conclusive as to the iniquity of the bill, and that all concerned in its final passage were no better than public robbers. In this light, the reply of the Secretary of War to the resolution of the House asking his judgment as to what items in the last act were improper is interesting and suggestive.

After extensive investigation he presents a list of some ninety-three works, which he seems to believe, without positively expressing that opinion, should have been omitted. Of these, an appropriation of $250,000 for the improvement of the Sacramento and Feather rivers, California, receives special treatment, because the Secretary thinks that hydraulic mining is the source of the difficulty, and the United States should not be called upon to remedy the resulting obstructions to navigation. It may somewhat astonish the severer critics of the act that the total of these items, omitting the Sacramento matter, amounts to considerably less than 4 per cent. of the total of the act. In examining these more closely there are found some singular items, such, for example, as $52,000 for Wood's Holl, Mass., the most frequented harbor of refuge on the coast, and $80,000 for the harbor of Michigan City, Ind., designed in the interest of the general commerce of the lakes. Another lake harbor of refuge, Grove Marais, with an appropriation of $40,000, is also in the Secretary's delinquent list. There is likewise some confusion manifested as to the lines of exclusion or inclusion. In some cases the Secretary would reject a work because the water commerce is local merely; in other cases objection is made because there is no local commerce. It is safe to say that the Commerce Committee will find means of revising the Secretary's list, and perhaps of showing that it is at least as open to criticism as the act itself. The controversy cannot but be productive of good to the country, and of information to public opinion. It indicates clearly the necessity, and perhaps points the way to the establishment, of fixed and accepted principles by which this legislation may be intelligently regulated in the future.

PETROLEUM EXPORTS IN 1882.

The petroleum export trade for the calendar year 1882 exhibits a falling off in the quantity sent abroad as compared with 1881. This, like other reduced exports in 1882, cannot be attributed to "short crops," for the petroleum "crop," so to speak, is garnered daily, and the surplus stocks on hand have touched the extraordinary total of over 35,000,000 gallons. In order to arrive at the approximate causes of this somewhat surprising decrease in the volume of petroleum exports, an examination of detailed statistics becomes necessary. In round numbers, the exports from the United States of crude and refined petroleum and naphtha, during 1882, aggregated 492,409,000 gallons, against 500,190,000 gallons in the preceding year; or, "in crude equivalent" (the equivalent number of gallons in crude oil), 612,113,350 gallons, against 621,785,516 gallons in 1881. These totals give a total decrease in shipments of 7,681,000 gallons of the various forms of petroleum, or 9,672,166 gallons, crude equivalent. The decline in foreign shipments has taken place since the month of July. The rapidity with which petroleum exports have dwindled since the month named will be best understood by the following memoranda during the latter half of 1882:

TOTAL EXCESS PETROLEUM EXPORTS OVER 1881.

	Crude equivalent. Total gals. from United States.	Total gals from New York city.
July 22	75,881,724	63,935,837
August 5	68,818,300	62,650,448
August 19	52,122,547	52,026,602
September 2	43,214,533	50,178,965
September 16	37,916,615	48,338,653
October 7	29,561,972	44,484,832
October 21	20,907,224	41,323,473
November 4	23,314,500	44,994,011
November 18	18,959,168	45,622,384
December 2	5,593,201	39,947,230
December 9	2,984,819	37,446,001
December 23	*8,269,309	33,814,481
December 30	*9,672,166	33,471,272

*Decrease.

Recently-published statistics concerning the destination of the petroleum and petroleum products exported from the port of New York during 1882 will afford some explanation of the growth and decline of our trade in mineral oils with other countries. The following took more American petroleum and petroleum products in 1882 than in 1881:

INCREASED EXPORTS OF REFINED OIL.

	Gallons— 1882.	1881.
Germany	97,234,808	70,042,218
China and Japan	31,637,450	17,985,910
East Indies and Java	25,198,225	24,973,745
India	20,504,060	12,441,980
Holland	13,091,827	19,994,612
Denmark	7,254,729	6,614,113
Argentine Confederacy and Uruguay	2,989,679	2,701,592
West Indies	2,733,013	2,710,267
Australia	2,622,795	2,077,171
Chili and Peru	1,588,710	758,140
Mexico	1,388,795	1,009,932
British North American Colonies	664,580	312,199
Cuba	755,834	565,672
France	520,675	none.
Venezuela	517,570	454,005
Spain	198,733	10,248
United States of Colombia	195,661	152,450
Other South American ports	136,490	64,090
Sandwich Islands	109,565	78,150

INCREASED EXPORTS OF CRUDE OIL.

Cuba	3,203,576	1,706,098
Norway and Sweden	148,235	115,187

INCREASED EXPORTS OF NAPHTHA.

Germany	1,225,525	990,711

DECREASED EXPORTS OF REFINED OIL.

Great Britain	51,548,231	57,456,589
Belgium	26,651,267	30,963,396
Austria	12,566,250	17,258,957
Norway and Sweden	6,789,961	7,746,457
Africa	5,775,098	8,010,761
Brazil	5,269,665	5,895,851
Turkey in Europe	3,876,839	6,996,594
Italy	1,961 912	3,325,772
Russia	1,609,272	2,255,402
Portugal	1,594,388	1,800,55-
Malta and Gibraltar	1,314,621	4,501,395
Turkey in Asia	1,231,580	3,455,840
New Zealand	749,638	764,19
Greece	379,300	2,675,110
Central America	184,944	200,524

DECREASED EXPORTS OF CRUDE OIL.

France	24,538,790	24,834,083
Spain	12,814,730	14,474,224
Germany	1,100,621	2,478,364

DECREASED EXPORTS OF NAPHTHA.

Great Britain	6,905,233	7,040,666
France	4,967,089	6,313,097
Miscellaneous	1,674,453	1,853,189

The falling off in shipments of refined oil to the principal countries in 1882 were to Great Britain about 6,000,000 gallons; Belgium over 4,000,000 gallons; Austria nearly 5,000,000 gallons; Malta and Gibraltar over 3,200,000 gallons; Greece about 2,300,000 gallons, and Turkey in Asia about 2,200,000 gallons. France took about 300,000 gallons less of crude oil, Spain about 1,600,000 gallons less than in 1881, and Germany about 1,300,000 gallons less. The totals were:

Exports from New York.	Gallons— 1882.	1881.
Refined oil	329,759,078	306,619,027
Crude	41,050,028	43,697,958
Naphtha	14,781,380	16,228,528

Inasmuch as New York handles about 80 per cent. of the petroleum exported, the movement of that commodity from this port to the various nations may be rightly considered an index to the state of the trade itself. The reason for Great Britain's reduced purchases of refined oil has been ascribed to the presence there of large stocks and an indisposition to buy during the latter half of 1882, owing to the suspicion with which the foreign trade looked upon the rapid fluctuations in prices here and the crop of rumors, first concerning new production, and then exhaustion of territory. The purchases by Austria, as pointed out in BRADSTREET'S Vienna correspondence a few weeks ago, have fallen away to a marked degree. This is due, as shown in the letter referred to, to the development of the petroleum regions of Roumania, Hungary and Galicia, which are already annually pouring over 8,000,000 gallons of crude oil into Buda-Pesth, Vienna and other Austro-Hungarian markets. Another cause is doubtless the recently-imposed tariff, which discriminates against American refined oil in favor of the Hungarian and Roumanian product. Turkey and Italy are also drawing on this new source of supply, which doubtless explains in part the decrease in their imports from the United States.

The statement of exports of petroleum and petroleum products during November, and for eleven months of 1882, prepared by the Bureau of Statistics, furnishes the following particulars:

EXPORTS DURING NOVEMBER.

	1882. Gallons.	1882. Value.	1881. Gallons.	1881. Value.
Crude oil	4,136,662	$341,756	3,562,982	$286,987
Naphtha	1,661,848	150,407	1,796,367	182,641
Illuminating oil	28,918,471	2,617,850	40,673,768	3,821,373
Lubricating oil	785,199	177,590	398,778	101,974
Residuum	346,836	20,517	155,736	7,013
Totals	35,849,016	$3,308,120	46,587,631	$4,399,988

EXPORTS DURING ELEVEN MONTHS.

	1882. Gallons.	1882. Value	1881. Gallons.	1881. Value.
Crude oil	41,605,778	$3,096,060	37,967,061	$2,908,514
Naphtha	15,743,749	1,210,618	19,079,712	1,888,145
Illuminating oil	404,020,699	35,349,930	403,917,789	38,390,295

According to the valuation given, the average price of petroleum and its products per gallon in 1882 was but $87/10$c., against 9c. and a fraction in 1881. Various articles have recently been published in which it was argued that this decline in the average price of the product during the year was "due to over-production," that, probably, being the most convenient handle to make use of. Over-production may be ascribed as the cause, from one view of the situation, for there was a great deal more oil produced during 1882 than was required to meet the world's requirements. But this argument is hardly admissible, for the year opened and closed on a rising market, in spite of enormous and growing stocks of oil. The exported petroleum products are quoted officially for shipment every business day, and prices thereof necessarily fluctuate in accordance with the speculative price of pipe-line certificates of crude oil—*i. e.*, crude oil in tank in the regions. The four months' depression in the same, caused by the Cherry Grove "over-production," if one pleases, dragged down the price of oil for export. The average price of certificates for 1882 was but 78½c., against 85c. in 1881 and 94c. in 1880. But "over-production" continues, and to-day, January 10, the tendency of the price of oil is upward. The immediate outlook for the export of petroleum in 1883 is not flattering. Lower ocean freights and renewed purchases from the other side may not be far off but as yet, they have made no sign.

THE LAW OF THE GRAIN EXCHANGE.

At the recent meeting of the Illinois State Bar Association Mr. Thomas Dent, of the Chicago bar, delivered an address upon "The Law of the Grain Exchange," in which he dealt with some of the questions connected with dealings in grain and other commodities which have attracted so much attention of late. He defined the position and services of the middle-men who stand between the producers and the body of the consumers and make it their business to buy and sell upon the market by the use of their capital. These men, he said, by their enterprise, skill and competition, encourage seasonable transportation to market, and insure a constant demand at fair prices for all the productions of the husbandman. They have not always, however, received such favor from the public, or from the legislature, or even from the courts, as they have deserved. In some instances legislation has been directed toward the repression of their business; it being supposed that the consumers should be allowed to deal directly with the farmers or producers, and not be under the necessity of paying a profit to a third party. Adam Smith's argument against the adoption of this policy in England was, he said, neat and comprehensive. That author showed that nothing could be more conducive to success in agriculture than the certainty of finding a market for what is produced; that the farmer would usually find it more productive to pay attention to his farming operations than to engage much of his time or capital in trade, or to give up his time in any large measure to the peddling out of the products of his farm; and that freedom of trade was likely to benefit the farmer by giving him a better market than he could otherwise have through legal discrimination against the trader or merchant.

The speaker added that freedom of trade in the staple productions of the soil might be said to be quite unrestricted by legislation. It was not even necessary that a person contracting to sell should be the owner of the property sold. In early times, indeed, when grain was hauled in wagons long distances to the principal markets, without prearrangement for sale, dealings in futures were unknown. In proportion, however, as business operations became diversified and extended, and larger credits were needed in carrying them on, the practice became more common of bargaining in advance for a price to be paid on delivery of grain or live stock, the growth of which was anticipated by the farmer or which was to be gathered and brought to the place of delivery in market. Such dealings in futures, Mr. Dent said, seemed to be justifiable as well from considerations of prudence as from the demands of legitimate trade. The

persons engaged in those transactions pursue a course but little dissimilar from that of the transactions in Mark Lane, in which the cargo, or cargoes, supposed to be laden or ready to be put on shipboard in San Francisco, or at more distant points, and not expected to arrive for months, will be the object of barter and sale, and of frequent reselling, during the whole time of transit. Time contracts in relation to grain, as well as other commodities, are of daily occurrence and must necessarily be so in commercial transactions. Parties to such contracts, acting in good faith, are entitled to the benefit of them, no matter what may have been the secret purpose or intention of the other party in respect to performing them or merely experimenting upon the credulity of others. While this rule is upheld, the speaker added, honest testimony is far more likely to be given than if the door be opened wider and parties be allowed to say that they intended to gamble. The contracts alluded to by the speaker were not, he said, "puts" and "calls," or mere privileges, but were actual contracts binding both parties alike. "They are made in the healthiness and freedom of trade, and if the volume of the transactions exceed immensely, as it certainly does so exceed, the amount of visible property, the effect of this freedom is to induce the embarkation of capital, to liberate and employ surplus money, and to give encouragement to activity and skill in this and coördinate branches of business."

Some of the considerations that exercise a restraining influence upon the dealers in the classes of contracts mentioned were pointed out by the speaker. If members of the exchange, they become responsible upon all actual contracts made by them, or by their authority, and are amenable to discipline by the association in case of default or want of punctuality. The fair name and the business reputation of those defaulting are at risk of action to be taken by the association. As will be seen, it is of great consequence to the member of the grain exchange to have the proper financial backing by his principal; to have the latter meet the legitimate calls for margins and securities, and be ready to satisfy claims for losses and damages, when these occur in the regular course of business. On the other hand, the right should be secured to him to have his principal treat trades or contracts as having been made in earnest, when that is his understanding of them at the time of making them. It is not fair that his principal should pocket differences with alacrity when profits come, and say that he was gaming or betting if the tables or prices have turned against him.

OCCASIONAL NOTES.

According to the annual report of the Controller of the State of New York the aggregate balances in the treasury on October 1, 1881, were $5,531,858.71; the aggregate receipts during the last fiscal year were $12,203,902.88, making a total of $17,735,761.59. The payments during the year aggregated $13,898,198.21, leaving a balance in the treasury on September 30, 1882, of $3,837,563.38. The revenue of the general fund for the year, added to the balance on hand at the close of the previous year, gives a total of $7,520,207.27, from which warrants have been drawn and transfers made to the amount of $6,467,920.97, leaving an apparent surplus on September 30, 1882, of $1,052,286.30. The actual surplus of the fund is, however, brought up to $1,170,034.02 by balances due from county treasurers and payments on account of appropriations of 1882 included in the tax payable in 1883. The Controller recommends that a surplus of at least $1,000,000 should be made available in the treasury at the close of each fiscal year to meet the current expenses of the new fiscal year commencing October 1. According to existing arrangements, the state taxes from counties are not payable into the state treasury until April 15 and May 1; hence, for a period of over six months, expenses in excess of miscellaneous receipts have to be provided for from borrowed money. The Controller is of the opinion that with the surplus of $1,000,000, supplemented by the receipts from corporations, payable in January of each year, the state finances can be kept well in hand. Now that the trust funds are closely invested and cannot be borrowed from, the appropriation of this surplus will oblige the state to go into the market as a borrower. The recommendation of the Controller that the Legislature tax for every dollar they appropriate during the present session, is an eminently wise one. As he very truly says, "the policy of the state borrowing money to provide for its living expenses, because it has spent its savings in building, is as objectionable and unsound as it would be in an individual; in fact, more so."

During the fiscal year just ended there has been no change in the figures of the total funded debt of the state, which amounted, on September 30, 1881, to $9,109,054.87. The gross valuation of the taxable property of the state in 1882 was $2,783,682,567, an increase over the last ten years of $695,055,122. It is estimated that the tax levy of 1882 at 2.45 mills will yield $6,820,022.29. The Controller recommends that the present practice of committing state convicts to penitentiaries, where they become an expense to the state, instead of to the state prisons, where they become a source of revenue, be discontinued. He points out that the penitentiaries are not state institutions, and that the result of treating them as such is that, notwithstanding the appropriations of former years, the penitentiaries have heavy claims against the state for deficiencies. Attention is called to the need for retrenchment in the expenses of legislative investigation. Some of the charges incurred by committees traveling at the expense of the state seem to have been of the most extravagant character. One instance is given in which the amount charged for the living expenses of a committee averaged more than twenty dollars per day for each member. The report states that the amount realized from taxes on corporations, under the laws passed in 1880 and 1881, shows a gratifying increase over that for the preceding year. The amount received for the fiscal year ending September 30, 1882, was $1,539,684.27, being $546,959.11 more than the receipts of the previous year. He is of the opinion that the predictions of the advocates of the law, that the revenue under it would reach $2,000,000, will be fulfilled within the next two years.

The annual report of the Auditor of the Canal Department shows that the revenues of the canals from all sources during the fiscal year ending September 30, 1882, amounted to $659,970.35, and the expenditures to $653,510.01, making the surplus revenues for the year $6,460.34. The canal debt outstanding amounts to $8,983,360, and the interest on the debt not matured is $538,602 per annum. In accordance with the provisions of the constitutional amendment making the canals free, the Auditor says provision must be made by the legislature for $1,600,310 for the expenses of the canals for the fiscal year beginning October 1, 1883. In consequence of the adoption of the amendment abolishing tolls there will be a deficiency of $547,264.61, for which provision must be made, by tax or otherwise, in order to meet the requirements of the remainder of the current fiscal year. The Auditor is of opinion that there will be no increase in the business of the canals, and it is doubtful whether the present tonnage can be maintained, unless something shall be done to facilitate the movement of boats through the locks and to quicken their speed. He points out that, while the canals have been gradually losing the carrying trade, the railroads have been gaining, and to such an extent that by far the largest share of the grain delivered at the port of New York is now transported by rail. He thinks, however, that if the time of transit by canal, between the lake ports of Buffalo and Oswego and the city of New York, can be reduced so as to approach nearer to that consumed by rail, it is more than probable that the canals would have the preference on all cargoes designed for export to foreign markets. He believes that this end can be secured, first, by making more liberal appropriations for the ordinary repairs of the canals, and devoting a distinct portion of the amount for reducing the prism of the canal to its legal depth of seven feet throughout its entire length, and afterward gradually deepening it to eight feet wherever it can safely be done; second, by substituting an improved form of gate at the head of each lock, and the introduction of mechanical appliances for operating the lower gates, and third, by the application of steam-power to the propulsion of single boats.

The progress of inventors whose energies are directed towards the completion of a practical secondary, or storage, electric battery of commercial shape has been marked during the past few weeks. A short time since BRADSTREET'S presented the views of a writer in the London *Engineer* who sought to show that no commercial storage battery had yet been produced. The claim made was that the advance made with the secondary battery was ample to warrant the investment of capital in further experimentation, but that it was yet too early to proceed in the matter of forming companies to manufacture secondary batteries to sell, or to dispose of the same to the public. Since reproducing these views the Brush storage battery has been exhibited in New York in a form which is claimed by its inventor to be thoroughly commercial. No exhibition could, however, permanently decide any question of its efficiency. Its continued use in public buildings and dwellings alone can determine that. There is no reason to believe that Mr. Brush has not succeeded in making a practical and efficient storage battery; but just how efficient and unlikely to get out of order are questions which usage and time alone can finally determine. The alarmist correspondence published in the daily papers of late in reference to the death-dealing properties of the Brush arc light current, by which the Brush batteries (supplying the Swan incandescent light) are to be fed, is born purely of a business rivalry. The imagination of the public, which is almost if not quite ignorant of the subject, was the weak spot aimed at. The Edison people had no bone to pick with the Brush arc light company so long as the latter confined their attention to arc electric lighting. When, however, they purchased the Swan incandescent lamp, and produced a storage battery with which to supply it, they promised to come at once into direct competition with the Edison company. Hence the sensational comments on the use of Brush wires for interior illumination.

The secondary battery, by the way, promises, when brought to its highest efficiency, to prove extremely useful. In view of this, all improvements in the construction thereof are of interest. The London *Iron*, in a late issue, mentions one, the invention of Messrs. Liardet & Donnithorne, of London, who claim they have produced a battery of half the size, half the cost, and of nearly double the power of any other electrical accumulator. The main features in the invention are stated to be the intermixture of porous lead, deposited either by direct action by means of a galvanic current, or by the action of spelter with oxides and salts of lead, such as may be produced from galena or other lead ore as the acting substance of the plates to accumulate the current. This mixture is placed on very thin plates of pure lead, which serve as conductors, and is kept in position by porous plates constructed of clay prepared in a special manner. The inventors lay great stress on the purity of the lead. The model cells consist of extremely thin plates of lead placed inside cells of porous clay, the spaces being filled up with oxides of lead in different states of oxidation. The experimental set of cells consists of fifty elements, each of which has an area of one-twelfth of a square foot, the weight of the set being 315 pounds. In some previous experiments the cells were charged by a dynamo, after which they are stated to have given a current of 12 ampères, with an electro-motive force of 95 volts. The demonstrations, therefore, are quite experimental, but suggestive of a marked advance.

In the *International Review* for January Mr. Lincoln L. Eyre essays to define "The American Aristocracy." He says that the spoils system is merely one part of a poisonous system of which official assessments, frailty of official tenure and general official slavery, "bossism," personal politics and *ad captandum* legislation are ingredients and essential factors, and declares that "the professional politicians who crushed the southern aristocracy of 1857 actually threaten us with an aristocracy of the north. These same gentlemen, in Congress, in state legislatures, in the executive control of federal and state governments, representing the municipality or the ward, or the little precinct, are all members of a privileged order, scrupulously classified, each grade of which is responsible, not to the public, but to the higher grades alone. Each plays into the other's hands for the common benefit of all, and the result is aristocratic government." Mr. Henry Randall Waite points out the danger to our institutions to be apprehended from the "Corruptible Elements in the Suffrage." He has collected statistics to prove that in many states the percentage of change in the popular vote, sufficient to reverse the results of the last presidential election in those states, is much less than the percentage of illiterates of voting age. Mr. Hugh Weightman describes the character and the position in the state of "The Peerage of Great Britain." In "A Defense of American Shipping," Mr. C. J. Brockway expresses the opinion that there has been current of late rather too much of reckless assertion and gloomy prediction in relation to our merchant marine. He asserts that, for the last two years at least, the foreign carrying trade has been moderately remunerative to ship-owners, and has encouraged ship-building, particularly in New England. Indeed, he states that at the present time there is a marked revival in ship-building on the New England coast. He advises as aids to the restoration of our foreign trade the abolition of consular fees and tonnage duties, the reduction of customs charges, and the introduction of a "subsidy" policy. Professor Bonamy Price reviews Mr. Hugh Bowlsby Willson's "Currency, or the Fundamental Principles of Monetary Science," and finds occasion to differ with Mr. Willson's opinions on some points, especially in regard to the monetary system of the Bank of England, which Mr. Willson criticises in his work.

According to a statement prepared by Mr. H. Kains Jackson, on the cereal harvest of the year 1882 in Great Britain, which is printed in the Manchester *Guardian*, it appears that the English wheat area is cultivated irregularly over the several counties, three of the eastern counties—Lincoln, York and Norfolk—producing about a fourth of the total yield. In these counties the average growth per acre is estimated at thirty-two bushels. The other districts yield averages varying from twenty-eight to thirty bushels. The gross English crop is estimated at 10,268,000 quarters. The entire area under wheat in Ireland, Wales and Scotland is given as 330,000 acres, and the yield, estimating the average production at twenty-eight bushels per acre, is put at 1,145,000 quarters, making the total production in the two islands 11,413,000 quarters. Mr. Jackson thinks that from this sum 1,000,000 should be deducted to allow for deficiencies resulting from unfavorable weather during the season and for the quantity required for seed, which would leave a total production for bread-making, etc., of 10,413,000 quarters. The total yield of barley available for malting, distilling, feeding, seed, etc., is placed at 10,400,000 quarters, of which about one-half is grown in eight counties in England. The average in these eight counties is estimated at thirty-six bushels; the average for the remainder of the two islands at thirty-two bushels. The entire production of oats for home consumption and seed is put at 23,400,000. As a basis for his calculations, Mr. Jackson takes the acreage estimates of the report of the Board of Trade on the agricultural returns, a summary of which has already been presented in BRADSTREET'S.

In the *Victorian Review* for November, 1882, Mr. E. W. Burton presents some "Considerations upon the Upper Chamber of Australian Legislatures." His subject, although of a local character, suggests to him certain general reflections of a depreciatory nature on the bi-cameral system, which he thinks stands condemned by experience. Mr. John McCarthy, in an article on "Land Settlement in Australia," deprecates the introduction of "landlordism" into the South Pacific colonies. He urges, among other measures, the imposition upon purchasers of land of a condition of long-continued personal residence on the lots or farms selected, and the restriction of the areas selected to a fixed number of acres. Mr. John Wicker gives an account of the progress of "Railway Construction in Victoria." He thinks that the building of railways in the colony has been proceeding at rather too rapid a rate, and that it is now high time to consider whether the colonists should not rest for awhile, and allow the railway system to develop itself along with the progress of the country. Two results which the writer thinks are revealed by his investigations are that railways in a new country do not promote agricultural settlement, and that the average earnings per mile of the Australian railways have declined in proportion as the mileage has increased.

SPECIAL CORRESPONDENCE.

CONDITION OF THE CENSUS WORK.

Washington, January 10.—The attention of Congress has again been called to the condition of the census work and to the fact that, notwithstanding the large expenditure, $100,000 are now necessary to continue the work for the remainder of the fiscal year—to July 1. Congress is not in very good humor as to the census, and not without reason. The managers of the census, who formed this encyclopedic system, either had no conception of the vast amount of money required to publish a national encyclopedia or were willing that Congress should enter upon the work without knowing the amount which it would cost, and trusting that, once begun, Congress would be certain to make the appropriations necessary to complete it. Whichever of these two theories is correct, it is very evident that the present managers of the census have shrunk from the vast responsibility of the undertaking. And now once more there is a deficiency. Unless an appropriation shall be made nearly all of the clerks will be discharged.

This appropriation will not be obtained without a

very thorough inquiry into the present condition and management of the census. The answers to these inquiries will show that the stupendous work of publishing the census has really only just begun. It is estimated that the reports of the different branches of the census, if they shall ever be finished, will comprise from fifteen to twenty quarto volumes, making, in the aggregate, including the Compendium, from 336,000 to 395,500 books. These reports, as is well known, comprise monographs on all the principal subjects relating to commerce, manufactures, industry, agriculture, mechanics, finances, fisheries, and to the general social, statistical and economic conditions of the country. To the present time but a small portion of the work has been printed. The portion that has been printed is the "Population Volume" and the Report on the History of the National Loan. The Compendium, which was to have been completed for issue last November, is as yet far from completion. The manuscript has not yet all been sent to the printer. With the completion of the Population Volume the work of the census, as contemplated by the Constitution, is undoubtedly substantially completed. For no one will venture to claim that the framers of the Constitution, in providing for an "enumeration of the people" every decade, expected that, under that simple clause, fifteen or twenty quarto volumes would be published every ten years, or the enormous aggregate of 395,000 books. Great efforts were made to have the Compendium completed by the time of the meeting of Congress. All the force of the office was concentrated upon this work, and most of the other work stopped; but the work is not yet completed. The bureau has failed thereby to make the favorable impression upon Congress which it had hoped to make.

The trouble is the managers of the census are apparently overwhelmed with the magnitude of the materials which have been collected under this comprehensive plan. They have not, for this reason, been able to systematize their work. A local history of the municipality of New Orleans, for instance, has been prepared and printed at much expense; yet the Compendium is not completed. This monograph on New Orleans interests comparatively a small number of people, and has no more legitimate place in the census than the town histories, which are so numerous in New England, would have. So vast is the mass of material scattered about in the different divisions of the census that there has been question of not using some of it at all, and of thus throwing away the large sums of money which have been expended in its collection. This proposition was at one time made as to a considerable portion of the statistics which have been collected relating to educational and religious matters. The publication of the report probably will alone show whether this determination was carried into effect. A large amount of the money appropriated for the census work was under the control of so-called "special agents." Some of these agents were influential enough to secure money enough to complete their respective monograms, no matter how much the rest of the census work suffered. This is true as to the volume on Debt, which, as a matter of fact, was published almost contemporaneously with the Population Volume. The census work has been so hampered for the last year by inadequate funds that changes of plan have caused much embarrassment. There seems to have been a constant dread of the approach of the evil day. That evil day has again come. General Francis A. Walker, of course, is responsible for the original plan of the census; but he retired from the active management before the crisis came. It is understood, however, that he is still a confidential adviser of the present census managers, and that proofs of all the important portions of the work are sent to him for revision and suggestion. In other words, there is reason to think that General Walker is still an active power behind the throne, although, of course, he is not responsible for the expenditure of money.

There has been some disposition to make the Public Printer responsible for the delays in the census work. These accusations are unjust, and cannot be maintained. The Public Printer, foreseeing that searching inquiries might ultimately be made into the progress and condition of the census work, has kept a record which will thoroughly vindicate the efficiency of his office. He has a record which shows the date and hour when every chapter of manuscript was delivered to him, the time occupied in composition, and the delays which have followed in the revisions, and repeated revisions, of the proofs. The Public Printer has constantly complained of the great delay in furnishing him with copy, and the Government has been put to a very large expense on account of this delay. It had been promised, for instance, that the manuscript for the Compendium should all be furnished so that the type could be set up, the matter stereotyped and the type distributed prior to the meeting of Congress. Acting upon this understanding, the Public Printer used a considerable portion of the type which belongs to the *Congressional Record* in "setting up" the census work. Congress came. The rest of the Compendium manuscript was not ready, the proofs were not revised, and there was no immediate probability that the manuscript would be furnished. The Public Printer had then to choose between throwing away all the work represented by the large amount of type set on the Census Compendium or to buy a new set of type for the *Record*. He was compelled to adopt the latter course, and the *Record* type is still locked up in the census work, while the printer is awaiting copy.

As long ago as November, 1881, it was stated that the clerical work of the census was then practically completed, and that within a few weeks the agents then employed expected to finish their labor. Then, as now, there was a deficiency imminent, and it was found necessary to suspend work or to assume extraordinary obligations. At that time the Secretary of the Interior authorized the employment of the clerks, with the understanding that they were to look to Congress for their compensation, and that the census was not to be considered as under any obligations to them for their voluntary service. Congress appreciated the situation, rendered valid this incurring of obligation, and the work went on. Now, for the second time since that period, there is a deficiency in the census fund.

The printing of the results of this mammoth work has hardly yet begun. The appropriations made by Congress for the printing of the census amount to $678,624. This is in addition to the millions which have been appropriated and expended in collecting the materials. The reports which have already been ordered printed are the Population Volume, Report on Agriculture, on Mechanics, on History of the National Loan, on Fisheries, and the Compendium.

These are illustrations of some of the present embarrassments of the census work.

A YEAR'S BUSINESS ON THE PACIFIC COAST.

San Francisco, January 4.—The past year has been a very successful one in most lines of business, the only drawback being in quartz mining, which has been far from satisfactory to shareholders. In a recent communication to BRADSTREET'S reference was made to serious charges of mismanagement preferred by a committee of the San Francisco Stock Board regarding certain mines on the Comstock lode. The effect was to lower prices very rapidly, producing a corresponding outcry against the committee, which was censured by those whose income depends upon keeping up the farce of development for what can be got out of assessments. Since then no more has been heard from the committee, but the managers of the group of mines controlled by the Bonanza firm have met and resolved upon a reduced rate of pay for themselves and other ornamental appendages of these corporations. The miners' pay, $4 a day underground, is not to be reduced. This is conceding something to the public, but it is of no practical value. There is no necessity whatever for so many separate organizations of companies. One set of officers could easily perform all the work that is now done by ten or a dozen sets; but no such concentration is probable, if, indeed, it be possible. The maintenance of these mining bureaus, so to speak, is the sole aim and end of the deep explorations on the Comstock, if one may judge from the regularity of assessments and the infinitesimal bullion product. The last dividend paid by any mine in the Washoe district was in August, 1880, when the Consolidated Virginia disbursed a small one preparatory to entering the lists as an assessment mine. The total assessments in 1882, for districts west of the Missouri, were:

Nevada	$5,444,400	Alaska	4,000
California	1,558,700	Mexico	105,000
Idaho	19,000	Lower California	40,000
Dakota	100 000		
Arizona	266,500	Total	$7,605,800
Utah	38,200		

This total is $1,779,360 less than the assessments of 1881, but it must be borne in mind that the shrinkage has been very great, and that the assessments were quite as heavy in proportion to values as in 1881. The dividends paid by mining companies last year aggregated $5,086,100, being $354,400 less than in 1881. California is credited with $1,345,157; Arizona $1,750,000, and Nevada, $745,000—of course, outside of the Washoe group of mines. There are several paying mines in California, however, of which no statement is published, and mining development in this state is making satisfactory progress.

The following figures disclose the magnitude of the export and import trade of San Francisco: Exports, 1882, $55,218,966; exports, 1881, $53,546,196; imports, 1882, about $43,500,000; imports, 1881, $38,446,034.

It is instructive to note the relative importance of the trade of San Francisco with various countries. Thus:

EXPORTS BY SEA IN 1882.

Great Britain	$29,770,851	Siberia	$119,693
New York	5,230,900	Germany	11,025
China	4,795,126	Japan	470,386
Hawaiian Islands	2,666,576	South America	137,900
South Sea Islands	516,150	Panama	215,244
Mexico	2,524,585	Belgium	2,270,318
Central America	964,153	East Indies	41,143
Australasia	1,666,812	Cape Town	344,513
British Columbia	1,567,782	Cape St. Vincent	377,511
France	1,617,385		

It will thus be seen that the English speaking people are by far the largest consumers of California products. Taking the small communities of Australia, Hawaii and British Columbia, their aggregate purchases in this market exceeded the exports to China and Japan last year by $722,648; and also exceeded the exports to Mexico, Panama, Central and South America, despite the demand of material for railroad and canal construction, by $2,096,268. These figures are suggestive, and should induce Congress to build up an already remunerative trade instead of handicapping it to encourage a purely speculative one in Asiatic countries.

The leading export was wheat, of which 18,529,152 centals passed through the Golden Gate, representing $31,001,200. Although the wheat export fell short of 1881 by 1,500,000 centals, the money value was slightly in favor of 1882. Last January shipping wheat averaged $1.66 per cental; it dropped to $1.61 in April, and fluctuated from $1.66 in May to $1.70 in August, closing the year strong at $1.73. A few cargoes shipped at southern ports might be included, but they would not materially affect the foregoing statement.

Treasure shipments by sea and overland were: 1882, $10,384,802; 1881, $11,735,336. The treasure shipped overland to New York last year aggregated $4,234,440.

The clearing house returns show a satisfactory increase in exchanges, amounting to $30,417,287 over 1881. Total exchanges for 1882, $629,114,110.

The amount of customs duties collected at any port is a fair indication of the volume and character of its imports. During 1882, $9,257,796 were collected at the San Francisco Custom House, an increase of $1,811,788 over 1881. The internal revenue collections foot up $3,891,757 for the past year.

Our domestic trade was correspondingly active in 1882. The overland freight statement for December is not yet available, but taking the twelve months ending November 30, 1882, and contrasting them with the corresponding periods of 1880-81, this result is arrived at: Overland shipments from California, 1881-82, 322,134,280 pounds; for 1880-81, 240,217,021; increase last year, 81,917,259 pounds. The Southern Pacific carried about 1,000,000 pounds more freight than the Central Pacific.

Wool is a leading product of California. The clip of 1882 was 39,448,340 pounds. The hold-over stock brought the total up to 54,902,519 pounds, of which, altogether, 35,051,797 pounds were shipped.

Advices from Portland, Ore., give a satisfactory statement of last year's trade. The value of imports into Columbia river was $23,000,000, of which one million represented foreign products, the balance being domestic. The exports were $15,560,000, of which wheat gave $5,757,000; flour $2,900,000; salmon $3,035,000; wool $1,395,000. The exports were foreign $9,694,000; to domestic ports $5,000,866.

Washington Territory had a foreign export of $1,460,725 in 1382; coastwise exports, $7,703,621. The Seattle coal mine produced 171,178 tons last year, San Francisco and Portland being the leading markets. The Puget Sound ship-yards were paid $290,500 for the construction of new vessels during 1882. In the last three years there were built in the sound one ship, fourteen steamers, one bark, eight barkentines and twelve schooners. A contract has also been made for a new steamer, 120 feet long, to cost $25,000, to trade between Seattle and Skagitt River. Population is steadily increasing in the territory, and everything is brisk, owing to the enterprise and investments of the railroad syndicate.

THE PROJECTED LOUISVILLE EXPOSITION.

Louisville, Ky., January 3.—As remarked some time since by the Louisville *Courier-Journal*, it is now generally known that Louisville, the Kentucky metropolis, will hold an exposition in 1883, at which all the evidences of the material growth and prosperity of the south will be exhibited. It is not intended to make this in any sense a local affair. Its projectors have taken a comprehensive view of the needs of such an undertaking, and propose to make the Louisville exhibition a worthy successor to the now noted exhibition which was held at Atlanta in 1881. The capital stock of the enterprise on foot has been placed at $300,000. Of this amount it is stated that $200,000 has been subscribed. Louisville further asserts that the whole amount required will be furnished by her own citizens, and that no outside aid will be asked. The building, as stated by the *Industrial Review*, has been contracted for, and will contain 15 acres of space for exhibitors—about twice the size of the buildings used at the Atlanta exhibition. Considerable interest has already been manifested by the manufacturers of the country, and it is expected that the calls for space will fully tax the room to be provided. The "propriety" of locating the second great southern exhibition at Louisville appears to have attracted considerable attention in southern newspapers of late. Without for a moment denying the advantage to be gained from having the proposed exhibition at Louisville, it is not easy to understand why this question of appropriateness need apply at all. Louisville, Baltimore, and other southern and semi-southern cities, have discussed each its own "advantages" for the purpose, but while they were so engaged Louisville went ahead, subscribed the money necessary to begin operations, and practically decided to hold such an exhibition. This fact appears to be a far greater reason why this enterprising city should possess the coveted distinction of holding the southern exposition of 1883. Meanwhile the citizens and journals of Louisville have buckled down to the work in hand, and are leaving no stone unturned to make the affair a conspicuous success.

The *Courier-Journal* even goes so far as to mildly but pointedly suggest that the usual annual exposition held at Cincinnati and the one projected at Nashville be held at Louisville in conjunction with the more comprehensive and representative one already under way. It may be doubted whether this result can be reached, much as it would redound to the credit of the cities concerned. Cincinnati and Louisville have a business rivalry which in a smaller way is a counterpart of that which has long existed between Chicago and St. Louis. This may prevent a coalition in the case of the rival Ohio river cities. As for Nashville, the transfer of its project to Louisville, while it would prove an advantage to the latter, can hardly be accomplished, owing to the pride Nashvillians take in their city, and, in view of the recent revival of Nashville in a commercial and industrial way. The Nashville affair is designed to represent the mineral wealth of Tennessee, North Carolina, Georgia and Alabama. It is, as the *Courier-Journal* remarks, "an admirable movement, inasmuch as the world knows little of the great wealth of the mines and forests of the sections described." In spite of what appear to be almost insurmountable objections to the amalgamation of the Cincinnati and Nashville exhibitions with the more comprehensive one projected at Louisville, "it is a consummation devoutly to be wished." Louisville's advantages in the matter of organizing and conducting such an exhibition have been much discussed. It goes almost without saying that they are ample. In addition to our excellent approaches by water, the well-known Louisville & Nashville Railroad and branches center there, and the rails of the Chesapeake & Ohio, Pennsylvania, Louisville, New Albany & Chicago, and other lesser lines, lead in and out in various directions. Louisville itself is neither distinctively a northern or a southern city, but partakes largely of the excellencies of character, social and commercial, which characterize those two large regions of the country. It is the sixteenth city in size in the United States, with a population of 128,000. Its territorial limits embrace 258 square miles, and its sanitary provisions are admittedly second to none in the country. About $2,000,000 was expended last year in constructing new buildings, and about half that amount in the erection and extension of manufactories. Respecting the actual advantages of Louisville in the matter of location relatively to chief centers of population and in other directions, the following from the current number of the *Industrial Review* is of interest: "If a circle is drawn on the map with Louisville as the center, on such a scale as to inclose 600 miles in diameter of territory, the line will just take in Chicago, St. Louis, Memphis, Birmingham, Atlanta, Charlotte, Wheeling, Mansfield and Toledo. Confined within this radius is more than one-third of the population and wealth of the United States. There is no point that the people of every southern state could reach

with their products at the same cost, nor is there any point so accessible to the people of every northern state to visit and examine the fruits of southern industry, and the qualities and conditions of soil, climate and products. To secure the full benefits of such an exposition, just such a central point as Louisville is of the greatest consequence."

LETTERS TO THE EDITOR.

NEEDS OF LITIGANTS IN PENNSYLVANIA.

To the Editor of BRADSTREET'S.

SIR—I desire to call your attention to a bill now pending in Congress, being House Bill No. 7,120, establishing a new judicial district of the United States in Pennsylvania. This bill is perhaps of more importance to merchants of New York and Boston selling goods in the northeastern and central portions of this state than even to the people of the state themselves. At present great difficulty is experienced in enforcing collections through the medium of our state courts, and the United States courts at Pittsburgh are so distant as practically to be out of reach. The result is that our courts are crowded with cases which should be in the United States courts, and the delay occasioned amounts to a failure of justice. The prospective bankruptcy business, which will ensue upon the passage of the new Bankruptcy act, gives additional importance to this measure. It was impossible to carry on bankruptcy proceedings originating in this section of Pennsylvania under the late Bankruptcy act with any satisfactory results, in contested cases, from the great distance of our United States courts. I, therefore, ask you to interest yourselves through your representatives in Congress, or by memorials circulated among the merchants or merchants' exchanges of your city, to secure the passage of the bill, remembering that the United States courts—aside from the government cases—are practically for the benefit of citizens of adjoining states, and that this bill is, therefore, more in your interest than in our own. Hon. Joseph A. Scranton, M.C., from this city, has charge of the bill.

R. W. ARCHBALD,

Scranton, January 9.

MERCANTILE COLLECTIONS IN THE WEST.

To the Editor of BRADSTREET'S.

SIR—We see by the Chicago *Times* that you recommend the withdrawal of credits by retailers. It would doubtless be better if it could be done, but you should be informed that, unless a little leniency is shown by the jobbers of New York and Chicago, at this time, in central and southern Illinois and Indiana, many honest merchants will be driven to the wall. Bankers in these sections inform us that many retailers are driven by the importunity of jobbers to resort to strategy in their way of honoring drafts held and returned. If they could be taught, by some means, to squarely put off the payment until such a time as they could meet the bills with some certainty it would be much better for the trade. Retailers in those sections are all overstocked; they must be protected from enterprising loaners who are advising an assignment in many cases where a little help and encouragement would tide them over. We think if you will look into this matter you will find it much as we state it.

Yours,

FOWLER & COLLESTER.

Bloomington, Ill., January 6.

SWISS INDUSTRY.

The Geneva correspondent of the London *Daily News* writes as follows:

Next to its admirable communal system and the thrift of its people the prosperity of Switzerland is in great measure due to the efforts that are being constantly put forth to supplement agriculture by industry. The first attempt to introduce wood-carving into Berne was made half a century ago by Christian Fischer, of Brienz, who may be called the father of the art, for after acquiring it himself he taught it to others and founded a school. Besides being an artist in wood, Fischer taught music, made musical boxes, and practiced the healing art, but like many other clever fellows he died in poverty. Some time after Fischer began wood-carving at Brienz a certain Peter Baumann began at Grindelwald the making of the miniature Swiss châlets which are now so popular. He afterward removed to Meyringen, where he taught his art to his three sons, one of whom, Andreas, proved to be a genius of the first order, and was equally distinguished for originality in design and skill in execution. He was the first to practice carving in relief. His roses are still regarded as masterpieces, and serve as models for young sculptors. The success of the Baumanns encouraged others to follow their example, and wood-carving soon became a winter occupation in nearly every cottage of the valley of the Hasli. But the sale of carvings and châlets being restricted to foreign tourists in the summer season, principally through the intermediary of hotel porters, the trade for a long while was limited and unremunerative. But it struggled on, and in the course of time attracted the attention of local capitalists, who started workshops, opened depots for the sale of their products, and began an export trade, which, with some fluctuations, goes on steadily increasing. The business of wood-carving now finds employment for several thousand individuals. In one establishment alone—that of the Brothers Worth—three to four hundred sculptors of both sexes are regularly occupied. Each has his or her specialty, the choice of which is left to individual taste. Some have an aptitude for and excel in the modeling of groups of animals; others give their attention to flowers and plants; others again prefer to carve ornamental caskets and build miniature châlets. The women have great delicacy of touch, and their work in certain branches is preferred to that of the men. One thing leads to another, and the abundance of certain sorts of wood in the district suggested the idea of adding to wood-carving the production of what may be called fancy furniture—carved chairs and tables, napkin rings and such like articles. A factory has also been started at Interlaken, and is now in successful operation, for making habitable châlets on a large scale. You have only to select your design, give the order, and all the parts of a châlet are sent to any destination, so arranged and marked that an intelligent joiner can put them together, and you have a handsome and picturesque house which you may live in as long as you like, and even carry about on your travels. Another trade which has lately sprung up in the Bernese Oberland is the making of slabs, table tops and other articles from the indigenous marbles and granites of the district. A beautiful red stone, soft at first, but which on exposure to the air becomes as hard as adamant, is extensively used for these purposes, and when artistically inlaid with black and white marble, is much sought by amateurs of marqueterie. Parqueterie is also becoming an extensive manufacture. The quantity turned out annually is estimated at 700,000 square feet, and the value of the wood carvings executed by the sculptors of the Oberland reaches a yearly total of 2,000,000 francs. The number of artisans engaged in the trade is 25,000, and their earnings range from two to five francs per day. The headquarters of the trade are Brienz, in the district of Interlaken, and Meyringen, in the district of Oberhasli; but many of the people work at their own homes, in remote valleys. At Brienz there is an excellent school of design, supported partly by the communes and partly by the canton; and the sculptors of Interlaken enjoy the services of a "master modeler," paid by the state. These industries have already done much to promote the prosperity of the districts in which they are carried on, and if they make the same progress in the future as they have made in the past they will soon take rank with the more important special trades of the Confederation. If similar, or some other, special manufactures could be organized in Ireland, the everlasting Irish difficulty, which has its root in the poverty of the people, would probably be robbed of its worst terrors. And there is no reason in the nature of things why special trades should not flourish in Ireland as they flourish in Switzerland. Neither country is gifted with mineral treasures, but Ireland possesses advantages that Switzerland lacks and would give much to obtain—seaports, navigable rivers, and ready access to one of the most extensive markets in the world, which levies no duties on her products, and where they find a ready sale.

INDIA WHEAT.

The Manchester *Guardian* has the following: The rapid increase in the exports of wheat from India since 1872 is shown in the following table. The figures refer to official years ending March 31:

	Cwt.		*Cwt.*
1872	637,099	1878	6,373,168
1873	391,010	1879	1,056,720
1874	1,755,954	1880	2,201,515
1875	1,073,655	1881	7,444,375
1876	2,510,762	1882	19,803,520
1877	5,586,604		

The enormous increase during the year ended March 31, 1882, was no doubt due to the high price occasioned by the short crops of wheat last year in the United States, as well as to the abundant yield concurrently realized in India. The latest official returns before us show that during the six months ended September 30 of this year the exports of wheat from India were 6,915,384 cwt., against 8,669,631 cwt. during the corresponding period of 1881. During the month of September, this year, the amount exported was only 812,804 cwt., against 2,280,084 cwt. in the corresponding month of 1881. No doubt the recent fall in price has been the main cause of the recent falling off, but it is not yet by any means certain that India is unable permanently to compete pretty successfully with the United States in the supply of wheat to Europe.

DAIRY BUSINESS IN THE NORTHWEST.

A recent statement of Secretary R. P. McGlincy, of the Elgin Dairymen's Association, regarding the dairy business, reads as follows: Seventeen years ago the Northwestern Dairymen's Association was organized in Illinois, at a time when western dairy products were at a remarkably low discount in the eastern markets; but the farmers of Illinois and Wisconsin were becoming hopelessly in debt from repeated failures of crops and low prices, and they were determined to make an effort to better their condition. So they organized an association, held a meeting, and discussed various plans, when finally it was determined, as a last resort, to attempt dairying. Speakers were procured from the east, meetings were held, and the dairy business was started in portions of northern Illinois and southern Wisconsin, and the result has simply been wonderful. It required hard, persistent labor; but the men who undertook the matter were either pioneers here or the sons of pioneers, and knew no such word as fail. Years passed by, and through the efforts of this and kindred organizations western dairy products were elevated in the scale of eastern markets, until Illinois and Iowa butter and Wisconsin cheese commanded a higher price than the goods made within a few hours' ride of New York. By the labors of this association it became possible for the country tributary to Elgin, Ill., distant only twenty-five miles, to produce in the year 1882 $9,000,000 worth of butter, cheese and milk, and to make a total of their products in the state for the same year of fully $75,000,000, and enabled Iowa and Wisconsin to make nearly as good a showing. By the work of this association, through its meetings and published reports, Elgin creamery butter has been made worth 43c. per pound this month, and cows worth, at public auction, from $45 to $60, and those, too, only what are generally termed native stock. Dairying in Illinois, Wisconsin and Iowa has proven the best mortgage-raiser ever conceived. It builds larger and better barns than grain raising; it gives farmers a better bank account than mining stocks; it gives them more comfortable homes, better land, better stock and more intelligence than any other avocation they could follow. What dairying has done for Illinois, Iowa and Wisconsin, it can and will do for Minnesota, if the farmers will go about the work intelligently, systematically, and regularly. From a personal knowledge of southern and southwestern Minnesota, gained during a visit of seven or eight weeks last August, September and October, I am convinced that the state possesses all the elements necessary to make it a formidable competitor of Illinois and Iowa in the production of fine butter, and of Wisconsin for cheese. The soil, water, grasses and climate, all combine to make dairying more profitable in Minnesota than grain farming, if we take one year with another. Cows in Illinois and Wisconsin net their owners from $45 to $55 per year, and this is cash money received, in Illinois, in monthly installments, and this latter system always gives the farmer cash, so that he can go into the market and buy goods cheaper than his neighbor who is obliged to ask for credit.

GERMAN POPULATION AND EMIGRATION.

The London *Times* gives the following summary of recently-published statistics of the increase both of the population and emigration throughout Germany. The population of Prussia increased, between 1816 and 1864, from 10,350,000 to 19,260,000, while, up to 1875, inclusive, it mounted up to 21,500,000, or 105 per cent. in 60 years' time. From 1875 to 1880 the population of all the German states has been increasing at about 525,000 per annum. At the last census, in December, 1880, the number of inhabitants was 45,250,000, which, if maintained at the same rate, would be 60,000,000 in 1900. The increase, as compared with that of France, is very remarkable, the French population during the last 5 years showing an increase of only 389,000, while the increase of the German population during the same period was 2,000,000, the birth-rate in the latter country being 3.91 per 100, whereas in France it is only 2.47. There is also this great difference between the two, that in France the increase has been almost entirely in the large towns, whereas in Germany the increase is general throughout the country as well as the towns. The number of emigrants that have left Germany during the last 60 years is over 3,500,000, of whom the greater part have taken their departure within the last 30 years, the United States having absorbed in 1881 no less than 248,323. Dr. Friederich Kappe estimates the amount taken away by each emigrant at not less than 450 marks, or £22 10s., so that the capital transferred to the United States during last year amounted directly to £5,587,267. And this, it should be remembered, is not returnable to Germany in the ordinary ways of trade or commerce as, in point of fact, the German emigrants to the United States become Americans, and, consequently, competitors with Germany in agricultural and industrial pursuits. Dr. Engel considers that the cost of bringing up a young person of the lower or middle classes to the fifteenth year is about £200, and he estimates the loss to Germany during the emigration of the last sixty years, in cash and valuables taken by each emigrant, at over nine milliards of marks—nearly twice the amount of the war indemnity paid by France in 1871.

LEGAL NOTES.

The question whether the certificate of membership of a board of trade is property subject to the claims of creditors was recently discussed in two cases in Chicago, in which opposite conclusions were reached. In the case of Barclay vs. Smith, decided January 3, the Appellate Court affirmed the decree of the court below, holding that a creditor's bill to reach the certificate of membership of a broker on the Board of Trade was properly brought, and that such certificates were assets which could be sold for the payment of debts. A few days later the same point was raised in the Circuit Court in Chicago, in the case of King vs. Netter and the Chicago Board of Trade. In this latter case Judge Barnum, after a review of the authorities cited in the preceding case, and after referring to certain conflicting decisions in New York, held that a certificate of membership of the Board of Trade was not property, but a privilege of membership, and that it was not subject to the liens of creditors. The question remains to be passed upon by the Supreme Court of the state of Illinois.

An interesting case, involving the question whether a *nom de plume* constituted a trade-mark, and holding that it did not, was decided by Judge Blodgett, in the United States Circuit Court, sitting at Chicago, on the 8th inst. The suit was brought by Samuel L. Clemens, popularly known as "Mark Twain," against Belford, Clark & Co. The complainant set out in his bill that he had used the *nom de plume* "Mark Twain" as an author and writer for twenty years, and had made it valuable; that the defendants had published a volume under the name of "Sketches by Mark Twain," the matter of which was substantially like that of one published by him, Clemens, in 1880, and that the preface purported to emanate from him. He prayed for damages and an injunction. The defendants demurred, and Judge Blodgett sustained the demurrer and dismissed the bill. He said, in announcing his decision, that this was the first attempt that had ever come to his notice to treat a *nom de plume* as a trade-name or trade-mark; that he did not think that a man could acquire an exclusive right to use a *nom de plume* any more than to use his Christian name. Authors could amply protect themselves by copyrighting their writings. It did not appear that the complainant's book, published in 1880, had been copyrighted, and it must therefore be regarded as public property.

In the case of the Michigan Central Railroad Company vs. Myrick, decided by the Supreme Court of the United States on the 8th inst., the point was raised whether a railroad company, in the absence of a special contract, was responsible to a shipper for the safety of freight after such freight had been transferred by it to another railroad company for transportation to its place of destination. An important question was whether the ticket or bill of lading given to the shipper by the railroad company in this case constituted a through contract. The court held that it did not, and that in consequence the railroad company was liable as carrier only to the extent of its own route and for safe storage and delivery to the next carrier. This decision appears to be in line with the general current of American authority and differs from the doctrine which prevails in England, where it seems to be the rule that the acceptance by a common carrier of a parcel directed to a point beyond the

end of his route is *prima facie* evidence of an undertaking to carry to that point, and that the carrier is, therefore, liable for the loss of the parcel at any point of the transit. The practical difference between the two rules, as far as the public are concerned, appears to be that, in England, the contract being with the first carrier only, a recovery for loss or damage could only be had against him, whereas in America, where a through contract was not made by the first taker, each of the carriers forwarding the goods would be liable for the time during which he had them in his custody, or the several carriers might become liable as partners where they had made themselves such by arrangement.

The case of Morrill, collector, plaintiff in error, vs. Jones, decided by the Supreme Court of the United States on January 8, involves a point of interest to importers of live stock for breeding purposes. Under a provision of the Revised Statutes (sec. 2,505) such animals are directed to be admitted free of duty upon proof, etc., and "under such regulations" as may be prescribed by the Secretary of the Treasury. Certain regulations had been prescribed by the Secretary, among them one directing collectors not to admit animals for breeding purposes free of duty unless such animals were of "superior stock, adapted to improving the breed in America." In pursuance of this regulation the collector in this case had exacted from the defendant in error duty upon certain animals imported for breeding purposes, but which, in the collector's opinion, were not of "superior stock." The court held that the statute clearly included animals of all classes; that the regulation in question sought to confine the operation of the law to animals "of superior stock," and to put into the body of the statute a limitation which Congress did not think it necessary to prescribe, and that consequently it was in excess of the power of the Secretary. The court intimated that to amend the law in the way attempted was not the office of a treasury regulation.

In the case of Wyckoff vs. De Graff et al., decided at the General Term of the New York Court of Common Pleas December 4, 1882, where an indorser of promissory notes had had the same discounted, and thereafter, upon the request of the maker and a prior indorser, made before maturity, and upon their promise to give him new notes therefor, took the old notes up before they fell due and before protest, as he claimed, to save their credit, it was held that he could not, by framing his action for the breach of the special promise, preclude the prior indorser from establishing such defenses as were available upon the notes, as, for instance, that he was an accommodation indorser and that the notes in their transfer from the maker to the plaintiff had become tainted with usury. The court held also that in taking up the notes the plaintiff was only discharging an obligation to the holders of the paper which he had incurred previous to and independent of any request by the maker and indorser, and that there was no distinction between his paying the notes as they matured and before they were protested (because he knew that the other parties would not be able to meet their obligations) and his paying at maturity on their default. The true consideration for his advancing the money was that he was bound to take up the notes if the maker did not.

A case involving the construction of a bill of lading and the consideration of the point to what extent carriers are responsible for the statements made therein by themselves or their agents, was decided on November 28, 1882, in the New York Court of Appeals. In this case, Miller et al vs. The Hannibal & St. Joseph Railroad Company, it appeared that some person unknown, holding himself out as a member of the firm of P. & Co., delivered to the defendant and appellant, at Kansas City, thirty barrels for transportation to New York city. The defendant issued a bill of lading, partly written and partly printed, certifying that it had received from P. & Co., consigned to their order, New York, "the following described packages, in apparent good order (contents and value unknown.)" Then followed the terms on which the property was to be carried, the insertion in writing, "Articles, 30 barrels of eggs, O. R. F., E. W. P. & Co., New York," and the signature of defendant's agent. The person receiving the bill indorsed it in blank under the name of P. W. & Co., and annexed it to a draft upon plaintiff, who accepted and paid it upon the faith and security of the bill of lading. The barrels were afterwards found to contain nothing but sawdust. It was not charged that the defendant knew of the fraud or acted in bad faith. The complaint was demurred to for insufficiency, and the demurrer was sustained. It was held that the bill of lading, taken altogether, imported only that the defendant had received thirty packages, described as containing, or purporting to contain, eggs, but the actual contents of which were unknown. The defendants did not make any representation as to the contents of the packages, and the plaintiffs, in making advances, were chargeable with knowledge of the contents of the bill of lading, and must be deemed to have relied upon the assurance of the shipper as to the contents of the packages. This, and some other less recent decisions bearing on bills of lading, which we have heretofore remarked upon, would seem to suggest caution in accepting these documents and paying money upon the faith of them.

BUSINESS NOTES.

Spanish farmers in the recently-flooded districts are sowing wheat again. In several localities the price of wheat continues very high. The severe rains have ceased and the agricultural situation has improved, but the Manchester *Guardian* is authority for the statement that the trouble has not entirely disappeared.

A competitive trial was had recently between the Jürgensen and Gramme dynamo machines under the auspices of the Danish government. It is reported that the Jürgensen machine, on an average of four days' working, gave 38 per cent. more light, while the Gramme required about ninety times as much wire as the other.

While the United States produces about 67,000 barrels of crude oil daily, its daily consumption is about 35,000 barrels, and the remainder is exported or goes into stock. Canada is said to produce about 1,200 barrels of crude oil per day, and to consume about 2,000, leaving 800 daily to be imported. The *Petroleum Age* estimates that the Dominion will require about 1,000,000 barrels of oil from the United States during 1883.

Louisville, Ky., received 37,500,000 bushels of coal and coke by river in 1882, 2,907,100 bushels of Kentucky coal by rail, and 6,538 tons of anthracite coal by rail. Of this 15,250,000 bushels of Pittsburgh coal was delivered to consumers, 1,400,000 bushels of Ohio river coal and 2,700,000 bushels of Kentucky coal—in all 19,350,000 bushels of bituminous coal. Of the anthracite receipts, 4,825 tons were delivered. The city's consumption of coke was 1,550,000 bushels.

The total of British failures reported to *Kemp's Mercantile Gazette* (London) for the week ending December 23, 1882, was 217, against 213 in the week preceding and against 275 in the week ending December 22, 1881, and 289 in the like week in 1880. England and Wales had 196 against 250 and 269 respectively in corresponding weeks in 1881 and 1880. Scotland had 17 against 18 and 13, and Ireland 4 against 7 and 7 in each of the weeks named in 1881 and 1880.

The complaints made that the electric light interferes with a desirable display of hues and colors, that it is "very trying" in a ball-room and out of place in an art gallery, are met by the statement that a prominent English dyeing house has successfully introduced it into their works. The statement is made (in *Knowledge*) that "the purity of the light enables them to distinguish colors perfectly and to carry on at any hour operations that could otherwise be performed only by daylight."

The projected Louisville Southern Exposition requires but $75,000, according to a late number of the Louisville *Courier-Journal*, in order to erect the thirteen-acre building on the desired elaborate plan. The sum of $225,000 had been raised, and Louisville, New Albany and Jeffersonville were to be canvassed for the extra $75,000 required. That sum, it was explained, or the want of it, could not interfere with the success of the proposed exhibition, but with the scope of the affair only.

The annual consumption of watch-face crystals is placed by the *Revue Chronometrique* at 100,000,000. This total, however, includes the crystals required for toy watches, lockets, compasses, etc. The annual production of watches is placed at 2,500,000, and the stock manufactured during fifty years at 70,000,000. To this is to be added 50,000,000 "old watches." Of the number in use it is believed that 87,000,000 require a new crystal face once a year. This, with stocks kept on hand, call for the annual supply named above.

The New York Silk Exchange has received about 20,000,000 Japanese silkworm eggs by direct importation via San Francisco. They are deposited on cards about twelve inches square, on which they lie so thickly as to prevent the cards being cut without some of the eggs being destroyed. The eggs are to be distributed gratis to silkworm culturists throughout the country. The exchange states that the interest in this industry in the United States is growing rapidly, and that inquiries are being made of them by mail at the rate of about 100 per day.

A new "savings system" is announced by the Paris *Journal Officiel*. On and after January 1, 1883, deposits were to have been received by French savings banks, from any who desired, by means of postage stamps. One franc is the lowest sum received by the French savings banks. But by the new system blanks containing twenty spaces are furnished depositors, who may attach to each space, from time to time, postage stamps of the value of not less than five sous. When the sum of one franc is reached the amount will be credited to the depositors.

In canton Vaud, Switzerland, there had been two hundred rainy days, up to the end of November, since January 1, 1882, and but fifty days of sunshine. Landslides had taken place in consequence, and a considerable portion of land covered with vines near Espesses was sliding rapidly toward Lake Leman. The Geneva correspondent of the London *Times* recently stated in that journal that heavy gales had again set in, and that the results were disastrous. This is, in addition to the recent reports of loss of life and property throughout sections of Germany and Austria, owing to rains and flood.

Nature (London) announces that an international exhibition will be held at Calcutta, beginning in December next. The leading departments are to be divided as follows: Fine arts; apparatus and application of the liberal arts; furniture and objects used in dwellings; clothing, including fabrics; products of mining industry, forestry, etc.; apparatus and processes in the common arts; food; artisan's workmanship, and children's work. Efforts will also be made to organize an extended exhibit of live stock, agricultural and horticultural products, painting, sculpture and works of art generally. The exhibition will open December 4, and close February 29, 1884.

The official report on the money-order business transacted by the Post Office Department of the United States during 1882 shows a total of $63,101,847.54, or about 12 per cent. larger than in 1881. The number of money orders issued was 67,170, valued at $1,401,858.27; paid and repaid 902,928, valued at $8,566,796.61; postmasters' deposits 20,324, valued at $24,176,372.21; drafts to postmasters 23,617, valued at $11,024,269.33; bills of exchange $4,765,973.86; Postmaster General's checks $1,838,775.15; deposit to Postmaster General's credit $1,983,713.09; money orders received and certified to Europe 467,424, valued at $8,236,469.06.

The Secretary of the Wisconsin Immigrant Association has completed his report for 1882, which shows that during the past pear 57,952 immigrants arrived in Milwaukee. Their destinations were various points in Wisconsin, Minnesota, Michigan and Iowa. The total of arrivals in 1881 was 47,956, showing a gain of almost 10,000. Of the whole number it is added that 31,758, or about four-sevenths, settled in Wisconsin, against a total of 25,769 in 1881. Over 24,000 out of the 57,952 were Germans, 13,515 were Norwegians, 10,545 were Swedes and 2,855 were Poles. Besides those which settled in Wisconsin, 21,732 went to Minnesota, 4,424 to Michigan, and but 372 to Iowa.

The disastrous result to the strikers among the bituminous coal miners in Pennsylvania and elsewhere during the past year has revived the plan for forming a national association of miners of bituminous coal "for mutual protection and defense in time of trouble." The extent of such an organization, if formed, will constitute it a powerful federation. The number of men employed in mining bituminous coal in various states has been given as follows:

Pennsylvania	70,000	Ohio	20,000
Maryland	25,000	West Virginia	10,000
Illinois	20,000	Indiana	8,000
Michigan	4,000	Iowa	8,000
Wisconsin	5,000		
Total			170,000

Conferences between leaders of various state miners' associations have been held recently, and it is expected that an interstate convention will be held at Pittsburgh about May 1, when the National Trades' Union will be formed.

No new features are mentioned by the London *Labour News* of December 27, 1882, concerning the state of the British labor market. Birmingham manufacturers, the Newcastle-on-Tyne and Hull shipping trades, hematite-iron trade and steel makers, Liecester woolen-yarn makers and Kidderminster carpet manufacturers were all busy, and had plenty of orders in sight. The trade at Darlington, the Dundee jute-yarn trade and shoe manufacturers all reported a slow trade, with dullness only in prospect. In the mining districts of Wales the colliers were unsettled. Building in London was brisk.

The business summary of St. Paul, Minn., for 1882, as telegraphed throughout the country, shows a population of 75,000, and $8,500,000 invested in new buildings. It is added that the volume of exchange increased $21,000,000, and the banking capital of the city $1,000,000. The volume of the wholesale and jobbing business for 1882 is placed at $62,528,000, while that of 1881 was but $52,218,265, an increase of $10,039,735. In the judgment of the largest dealers the footing of the books will show that the trade of 1882 has exceeded that of 1881 by over $15,000,000. The latest procurable report from the City Treasurer shows the bonded indebtedness of St. Paul to be $2,002,000, as against $1,726,000 in 1881. The report shows receipts of $1,128,326.50 for 1882, and $626,760.54 for 1881, an increase of $501,567.96.

The Berlin correspondent of the London *Standard* points out, in that journal, that the German imperial post-office department virtually monopolizes the newspaper trade of that empire. Any newspaper in Germany, and almost any of the leading journals throughout the world, may be subscribed for at any German post-office. The new catalogue of the German post-office gives the names of 8,412 newspapers, any of which the department is ready to supply to subscribers at any office throughout the empire. Of this number, 5,550 are German, including most German papers of Austria and Switzerland, as well as of the United States and Brazil; French 1,022, including those of France, Belgium and Switzerland; English, including British, Colonial and American, 821; Danish 168; Swedish 162; then 150 Italian papers, 148 Dutch, 77 Polish, 68 Norwegian, 53 Russian, 44 Spanish, 30 Roumanian, 26 Hungarian, 13 Czech, and 11 in modern Greek.

The National Bank of Bay City, Mich., has been organized; capital $200,000; Byron E. Warren president; Frederick P. Browne cashier. The First National Bank of Larimore, Dak., has been organized; capital $50,000; Andrew J. Bowne president; Charles A. Bowne cashier. The Traders' National Bank of Charlotte, N. C., has gone into liquidation. The Watsontown (Pa.) National Bank has elected Thomas Bower president, in place of J. G. Dunham. The Hampden National Bank of Westfield, Mass., has elected R. Noble president, in place of E. B. Gillett. The Washington National Bank of Westerly, R. I., has elected Charles Perry president. The Penn Bank of Pittsburgh has elected William N. Riddle president, in place of J. H. Hopkins. Henry Brigham, president of the Merchant's National Bank of Savannah, Ga., is dead. John Shanks, president of the Farmer's National Bank of Sharpsburg, Ky., is dead. John Sniffen, president of the Long Island Bank of Brooklyn, died on the 10th inst.

In a recent issue of the Buffalo *Courier* there appeared an exhaustive account of the railway and canal business of the city, prepared by Mr. William Thurstone, the veteran commercial editor of that journal. The growth of the coal trade of Buffalo is remarkable, the total imports of all kinds aggregating 3,031,791 tons, against 2,243,571 tons in 1881, and 1,813,095 tons in 1880, an increase in 1882 over 1881 of 788,220 tons. The amount of capital invested in manufactures of all kinds is estimated at $32,000,000; the annual value of the products $52,000,000; the number of hands employed 27,000. The banking capital is $3,000,000, with resources equally large. The total receipts of cattle were 37,115 cars, or 630,955 head, a falling off of 1,528 cars, or 25,976 head, compared with last year; of sheep 7,300 cars, or 1,460,000 head, an increase of 1,738 cars, or 347,600 head, while the receipts of hogs show a decrease of 735 cars, or 84,725 head. The decrease of cattle and hogs is due largely to the high prices which prevailed during the feeding season for both corn and hogs, as well as fodder of all kinds, while no small share of it is also to be attributed to the traffic in dressed beef and mutton, which is beginning to assume considerable proportions.

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

It is hard to find in such a market as we have had during the pastweek much to talk about. Business has been so flat and dead that the brokers are not making their salt. Commission houses are in the doldrums; they are not doing enough to pay their gas bills. The great outside public remains outside; it is letting Wall street severely alone. But all experience will be at fault if this stagnation be not precedent to a period of great activity. It is not natural that the situation should for long continue as it is. The conditions of trade, and the known situation of the leading operators of the street, point to a renewal of activity in the near future; and it would not be surprising if this activity, when it does fairly begin, should be extreme enough to fully compensate for the present stagnation. At present it is quite impossible to guess what direction the movement will take; but it would probably be safer to count on a movement to depress prices than one to put them up. In other words, the outlook promises more for the bear than the bull side. The position of the chief operators in the market has not, to all outward seeming, changed from what was said of it in these columns last week. It is talked all over Wall street, and has been for the past two weeks, that there is a combination of operators to bull stocks, which does not reckon in its members either Mr. Gould or Mr. Keene. When these men are pulling together, and a combination of smaller operators are pulling against them, the result is most apt to be a sort of deadlock for a time. Each side strains, and at last something gives way. The bull combination is reputed to be made up of Mr. Cammack, Mr. Charles Osborn, Mr. William Scott, Mr. Woerishoffer and Mr. Henry Smith. This is a strong team, but it does not seem to be strong enough to pull the market their way, while Mr. Gould declines to assist and Mr. Keene is actively inimical. Another circumstance is said to affect the situation, viz.: that the members of the combination are so distrustful of each other that they are watching each other like a cat would a mouse-hole to see that no one sells out on his partners. They can't heartily unite in a bull movement on this account, for to whirl up prices confidence is necessary that the mutual contract not to sell until an agreed range of prices has been reached shall be strictly observed. Mr. Gould has stocks to sell, of course. He has had them to sell any time during the past two years; but he doubtless has far less to sell than he had a long time back, when he made that famous exhibit of his fifty millions of securities. Naturally he would be a bull, but he has scarcely cared to disguise the fact that he thinks the present moment inopportune for a bull movement. This must be interpreted to mean that he does not care to assist in making a market upon which the bull combination can unload the stocks which they have unwisely accumulated. How soon he may be in a position to change his tactics is a question one may speculate upon, but is not likely to get an answer to before the change is made.

The peculiarity of the case, as was said last week, is that the bull combination is composed of men who have long been known as operators on the bear side of the market, and their appearance now in a new role has caused the combination to be dubbed "the pool of reformed bears." Probably they wish they had not experienced a change of heart quite so soon. It is said that Mr. Vanderbilt is giving them his support. His moral support, he may, but from surface indications it does not appear that the support goes much further. Indeed, they point the other way; and it is alleged that as a recompense for the moral sustenance he has extended he has kindly permitted them to buy a good many of his stocks. The continued weakness of New York Central, in face of the fact that the road is doing a big business at paying rates, is pointed to as significant that some one is feeding out as much of the stock as the market will take. Still, to outsiders Mr. Vanderbilt's position is more or less a mystery. Mr. Keene appears to be actively on the bear side. His operations are usually shrouded in mystery, but enough seems known now to say that he is not a believer in higher prices just at this time. This great operator very rarely goes into pools or combinations. He works alone; his operations are generally known only to himself. His brokers are often as mystified by his dealings as outsiders. At this time he is talking lower prices, and though a great operator often talks that way when he is preparing plans for an upward movement, it is not always so. Sometimes he finds it serve his purpose to speak with perfect frankness, and to make words and acts correspond. Mr. Keene appears to be doing that now. He is talking bearish; and, perhaps, like Mr. Gould, sees no inducement to go and help strengthen the market when a combination of other operators are waiting the first opportunity to unload their piles of stocks on it. But, as before said, this state of affairs cannot last very long. The market will make a move one way or the other. Either something will break, that is, the bull combination will dissolve in a general throwing over of stocks, or some agreement will be reached by which all forces will be united in the effort to advance prices. Yet the public is the important consideration. No use to put up prices if the great public obstinately refuses to come in and take the stocks off the hands of the leaders. These men are not going to buy of each other if they can help it. They want to sell to the public. They want the once large and now sadly diminished flock of lambs to come in and browse. But there seem to be no lambs now. If a bad break takes place the bull pool will be the sufferers. They are unfortunate in having for their leading card such a stock as Denver & Rio Grande, which has got itself into such bad odor that the street generally is afraid to touch it.

If we turn from the local features of the stock market to general trade and industrial conditions, by which the stock market is ultimately governed, conflicting views are presented. On the one hand we have a formidable weekly list of failures, which seems to be growing in length; and we have certain knowledge that trade generally is very dull, and the condition of the iron and coal industries is not satisfactory. On the other hand the railroads report an active movement of grain and produce. But this side can best be presented in the following communication from Chicago, dated January 6:

The year opens most auspiciously for the railroads. The managers say that the prospect of continued peace and unity of action in regard to rates was never better than at present, and the prospect for a large winter and early spring passenger and freight traffic was never before so promising. Manager Gault, of the Wabash system, asserts that his lines are doing a much larger business than ever before at the opening of January, and that winter rates were never so good. An evidence of the large freight traffic of the roads leading from Chicago to the interior is that the receipts for the week just closing aggregated 138,179 barrels of flour, and 2,458,000 bushels of grain, against 83,237 barrels of flour and 1,271,000 bushels of grain for the first week in January, 1882; the gain this year is all the more remarkable for the reason that present prices are full 32c. per bushel lower on wheat, 15c. on corn, and 9c. on oats, hence there is less inducement to bring property forward than at this date last year.

The loan market has been easy through the week. There is no want of loanable funds, and at low rates. The average rate on call has been 5 per cent.; only once or twice has it touched 6, and sometimes has been down to 4 per cent. Indeed, the loan market appears to be in every way favorable for a bull movement in stocks, but it does not come all the same. Foreign exchange, however, is not so satisfactory; instead of going down, it goes up. The posted rates yesterday were up to $4.82@$4.86. Actual rates yesterday were $4.85¼@$4.85½, and $4.81¼@$4.81½. There is a scarcity of commercial bills, and no bills offered representing the purchase of securities here on foreign account. The movement is the other way. It is known that some large blocks of our securities have been returned from abroad within the past ten days. The Bank of England keeps up its rate to 5 per cent. still; but the bank gained largely of specie during the week, and the depletion of the reserve against liabilities, which was so marked last week, was due to temporary outward movements of money, for the return flow this week has brought the reserve up from 29⅞ per cent. to 37 11/16 per cent. this week.

Governments are quiet, and the market presents no feature calling for comment. The following were the closing quotations yesterday:

	Jan. 5, bid.	Jan. 12, bid.	Jan. 12, asked.
U. S. 4s extended (3½ p. c.)	102	102	...
U. S. 6's 1881, registered	113½	113½	113¾
U. S. coupon	113½	113½	113¾
U. S. 4s 1907, registered	119½	119⅜	119¾
U. S. 4s 1907, coupon	119½	119½	119¾

The bank statement of Saturday last was favorable in that it showed a gain in the surplus reserve of $1,261,825; but less favorable in that it showed the large expansion in loans of $6,348,000. This expansion is said to be almost exclusively due to local speculative movements. The surplus above the 25 per cent. reserve is now $4,637,225. The following are the comparative totals of the statements of December 30 and January 6:

	December 30.	January 6.	Differences.
Loans	$311,071,200	$317,419,200	Inc. $6,348,000
Specie	57,627,100	63,152,800	Inc. 2,525,700
Legal-tenders	18,664,200	20,204,700	Inc. 1,540,500
Deposits	291,664,600	302,881,100	Inc. 11,217,500
Circulation	17,625,500	17,537,600	Dec. 87,900

The proportion of total reserve to deposits is now 26.53 per cent., against 26.11 per cent. at the same date last year.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

The dispatches to BRADSTREET'S this week from the principal cities of the United States reveal a somewhat improved feeling in general trade circles, and this in spite of the large number of small failures reported. The dry goods trade shows some improvement. Wheat has advanced during the week in consequence of the prospect of a greater European necessity for foreign wheat, owing to the probability that next year's crops will be short throughout Europe. Corn has advanced pretty largely, partly, as the result of speculative manipulations at Chicago, but partly also as the result of a continued large consumptive demand in the eastern markets. The entire movement of grain at the west has fallen off since the holidays. It is believed that the prospect of higher prices for all foodstuffs makes the farmers unwilling to sell. Iron is still depressed in price, and inquiries are made to learn the views of makers rather than with any intention of buying. Pig has been sold under current rates. Manufactured iron is quoted from 2.3c to 2.6c., according to grade and style, with concessions possible for cash offers for large lots. Nearly 1,000 tons of foreign pig have been sold in New York during the week on private terms. Steel rails are quoted at $40, although $41 has been paid for small orders. The feeling in western iron circles is hopeful. Petroleum continues buoyant, although quiet, in the neighborhood of 90c. in view of the fact that there is still one Forest county well expected whose probable flow cannot be determined in advance. All the new gushers to date are proving short-lived. Forest county itself is of spotted value only, and the outlook, in the absence of new complications, is for a bull market. The coal market is dull. The talked-of suspension of work at the anthracite mines to reduce stocks, it is expected, will be decided next week. The output of anthracite for 1882 is about 600,000 tons in excess of 1881. The outlook for the current year is that more coal will be shipped west, arrangements having been made to that end. The ocean freights market exhibits no new features of importance. A number of petroleum vessels have arrived, but fancy rates for charters are asked, and shippers do not respond. This is due to the fact that stocks abroad are large, and the foreign market continues shy during the mercurial state of the speculative market on this side. Grain has gone abroad more freely during the week at Baltimore and Philadelphia than at New York. Berth rates and the movement by steamer have continued as for several weeks past. There has been increased activity in the wool trade and the market closes stronger, particularly for fine fleeces. There were 342 failures in the United States reported to BRADSTREET'S during the past week, 85 more than the preceding week, 139 more than the corresponding week last year, and 164 more than the same week in 1881.

BREADSTUFFS.

The general situation in the markets for breadstuffs continues to progress toward higher prices, not only for the present but for the future, covering the next crop year. Accounts from all the principal wheat importing countries of Europe show that next summer's crop must inevitably be so much below an average that the effects of the large crop in the United States last summer will be neutralized long before the surplus from it is marketed. The *Mark Lane Express*, of December 25, says that, owing to bad weather, not over two-thirds the area of last year will be planted in wheat for the next crop in the United Kingdom, and that it is certain that the area planted in France cannot much exceed the same proportion of last year's area. French authorities now estimate the reduction in the area planted in France will be at least 12 per cent., but that of even that which is planted a large part will give a very poor yield. That which was planted very early in the autumn looks well, but all that was planted late is spindling and unhealthy, and a good deal has rotted in the ground. Various French statisticians estimate that the wheat crop of France next summer will—even with a favorable summer—be from 32,000,000 to 38,000,000 bushels short of last year's yield, but that if the spring and summer should be unfavorable the shortage will be greater. France had nominally a large crop of wheat in 1882, but it has turned out to be of much poorer quality than was expected, being light in weight. She has consequently been a larger importer than was expected. From August 1 to December 1 the imports of wheat into France had been 3,000,000 bushels greater than in the corresponding time of 1881. This increased rate of imports of foreign wheat is still in progress, and, with the certainty that the home-grown crop must be largely short next year, the necessity for imports of foreign must increase. The same causes that have induced a greater importation of foreign wheat into France and the United Kingdom during the past five months have prevailed in Germany, where the imports of foreign wheat have been largely in excess of the previous year.

The total exports of wheat and wheat flour from the United States from July 1 to January 1 were equal to just about 100,000,000 bushels of wheat, which deducted from the crop of [not exceeding] 510,000,000 bushels, would leave 410,000,000 bushels to be disposed of as follows: Consumption for food for from 54,000,000 to 55,000,000 of population from July 1, 1882, to July 1, 1883, 250,000,000 bushels; seed for 40,000,000 acres, 60,000,000 bushels, leaving 100,000,000 bushels for exports from January 1 to July 1, 1883, and for surplus to maintain stocks from July 1, 1883, until the new crop shall be harvested and distributed during the month of July. This latter item would require at least 15,000,000 bushels, which would leave the net available surplus for export between January 1 and July 1, 1883, say, 85,000,000 bushels. At the present current weekly rate of exports this would be gone by July 1.

AMERICAN WHEAT MARKETS.

The wheat markets of the United States have shown more activity in the last week, and prices have advanced between 3 and 4c. per bushel in the last ten days. This has been due entirely to the advancing prices in the foreign markets and the prospect that the next crop of wheat will be short throughout Europe. Aside from this, there has been no speculative or other influence to cause a rise in prices. The markets have been comparatively free from manipulation. Wheat has been depressed for several months by the understanding that in all the largest countries of the world the crop of 1882 was the best for several years. The acknowledgment of this has kept prices in this country from 15 to 18c. per bushel below the average prices of the last four or five years. The fact that it was so depressed has made the bears conservative, and they have refrained from putting out lines of shorts, because they have realized that there was no probability of any considerable further decline. The result of this has been that there was at no time in the last few months any considerable short interest out that could be made available for a corner. Consequently there has been none of the manipulation which prevails when there is a chance for a change in the market both ways. The advance this week has been purely on the prospect of an increased demand for export.

The entire movement of grain at the west has fallen off since the holidays. The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria in the week to January 9 were only 818,461 bushels, against 1,229,827 in the week to December 27 and 1,036,038 in the week to December 20. The recent change to pretty severe winter weather at the west may have had some influence in diminishing the receipts, but it is probable that the prospect of better prices had more. There are large buying orders in both the New York and Chicago markets for speculative and also for foreign account, and at every break in prices these orders cause a reaction.

The visible supply of wheat in the United States increased 107,533 bushels in the week ending January 5.

CORN.

Corn has advanced for all options and in all the American markets. In the last ten days the advance on the near options—January and February—in the New York market has been only from 1 to 2c., but in Chicago, where there is a speculative movement in the near options, the advance in January options has been 8c. per bushel, February 5c., March 4c. and May 2c. The total amount of corn in store in Chicago, January 7, was 3,059,918 bushels (of which only 1,738,970 was No. 2), against 5,230,000 one year ago. The advance has checked the shipping demand in Chicago; shippers being unwilling to pay the advance, but this only makes the deficiency of supplies in the eastern markets greater, and only defers the demand. We see no reason to change the views expressed in this article some weeks ago to the effect that the corn crop has been over-estimated and that prices will continue comparatively high all winter. The receipts of corn at the west, like those of wheat, have fallen off since the holidays and for similar reasons. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria, for the week ending January 9, were 1,579,910 against 1,831,079 in the week to January 2, and 2,389,875 in the week to December 27.

The visible supply of corn in the United States increased 125,007 bushels in the week ending January 5.

PROVISIONS.

As remarked a week or two ago, the general course of the prices of provisions will be the same as that of corn. Provisions have advanced since the beginning of the year 25 to 30c. per barrel on pork and 18 to 20c. per 100 on lard. The whole movement of hogs and packing operations continue to be below the volume of last year's business. The total number of hogs packed at all points in the west, from November 1 to January 10, has been 4,050,000 head, against 4,220,000 in corresponding date of last year. The aggregate receipts of hogs at Chicago, Cincinnati, Indianapolis, Milwaukee, Peoria and Kansas City, for the week to January 11, were 329,336 head, against 379,466 in the corresponding week last year. It will be remembered that at the beginning of the packing season, on November 1, the stock of provisions in the whole country was lower than at the same date for several years. This relative deficiency has not been made up, but, on the contrary, has increased, and it is now estimated that the shortage of stocks of provisions in the United States, as compared to the corresponding date of last year, is equal to the product of 1,250,000 hogs. The estimated stocks of lard at the forty-six principal points in the United States on December 30 were equal to 135,540 tierces, against 275,291 tierces December 30, 1881, and 223,154 tierces December 30, 1880. The estimated stocks of lard at all principal points in Europe November 31, 1882, were 81,500 tierces, against 92,500 tierces November 31, 1881, and 66,500 tierces November 31, 1880.

THE PROVISIONS MARKETS BY TELEGRAPH.

From Chicago, Ill.: The activity in trade and upward tendency in grain during the past three days has failed to exert any appreciable influence on provisions, which have occupied a position of unusual quiet. Brokers say they have few orders from the interior or eastern seaboard, and buyers on European orders make similar statements. A broker in the latter line of trade, who is usually a large shipper, stated to-day that, although the shipments direct from Chicago to the leading markets in the United Kingdom were liberal, the consignments were mainly from packers who have houses in that country; hence, while the property is steadily going out, the shipments fail to attract any special attention here, from the fact that the provisions are not bought and sold on 'change as was formerly the case. But while the change in the manner of supplying Europe has a tendency to lessen the volume of business on 'change, the influence on future values will be all the same, as stocks are going into consumption unobserved by speculative dealers, many of whom imagine that the shipping demand is small because there is less than the customary inquiry for cash property. The absence of the usual demand for future delivery from purely speculative dealers is largely due to the fact that the receipts during November and December were largely in excess of the estimates of the best informed operators, many of whom bought largely at the opening of the season, and consequently suffered severely by the depreciation which followed the heavy receipts. The present arrivals are much smaller than at this time last year, the estimates for the current week being 175,000 head, against 235,447 for the same week in 1882. But the fact that receipts so far this season have shown great irregularity, running up and again falling off severely, renders outsiders cautious, and buying orders are given with more than usual reservation. The market, however, possesses many elements of strength which, although not at present exerting any apparent influence on values, must do so in the near future—the most patent of which is the fact that present stocks in the west are equivalent to the product of 500,000 hogs below that of this date in 1882. Nor is there any prospect that any portion of this deficit will be made up between this and the close of the season. On the reverse, the packing from this until the close of February will fall below the same time last year, while the low condition of stocks at all consuming points will necessitate more liberal shipments to meet the demand for current consumption. It is also noticeable that many of the strongest firms in the trade are scarcely offering property, and it is strongly suspected that some of them buy freely through brokers on every break in prices; and this fact hinders many who are proverbial for selling short from putting out large lines at present prices.

From Evansville, Ind.: Pork packing is about over for the season, and packers say it is 80 per cent. better than last year—about an average of former years; prices are firm, and the local supply is light.

From Louisville, Ky.: Hog market firm; receipts light and readily sold. Provisions quiet and steady, with full stocks; holders are strong in their views, and quote prices above other markets, hence the movement here is as yet light. A better demand with a higher market is confidently looked for. One hundred and twenty thousand hogs were packed here this season, being 11,000 less than last year. The average of the previous five years was 200,000. The hogs packed here this season were of unusually fine quality.

From St. Louis, Mo.: Cattle fairly brisk, with firm prices and large offerings. Hogs in large shipping demand, and advancing; receipts good, and of excellent quality.

From Kansas City, Mo.: Provision market reported in a healthy condition. The country demand for products is heavy. Stocks fair and prices steady. Packers and jobbers report sales satisfactory for the season, and the outlook for general trade continues quiet and without special features. Collections fair. Cattle market shows a decline of fifteen cents within past week, owing to heavy receipts and unfavorable eastern advices. Hogs also experienced slight decline; receipts large; market now steady.

From Memphis, Tenn.: Hog products in good demand, and prices steady. Live stock is scarce, as receipts continue very light, and prices hold up.

From Nashville, Tenn.: Provisions steady, with good demand. Cattle receipts fair, demand very good, and prices higher.

THE NEW YORK DRY GOODS MARKET.

The New York dry goods market still reports dull trade for the week. There are plenty of buyers in the market representing interior jobbers, but they are not purchasing yet to any great extent, though constantly around to make an occasional selection. Business, however, is no quicter than usual at this time of the year, and seldom becomes brisk until after February 1. Retailers are buying nothing but what they are really compelled to, as their aim this month is to reduce stocks as low as possible. The importations of dry goods for the week are as follows:

	No. of packages.	*Value.*
Total imports of dry goods during past week	9,459	$3,047,170
Total amount of dry goods, duty paid, for past week	9,224	2,955,874

THE BRITISH COTTON GOODS MARKET.

[By Cable to BRADSTREET'S.]

London, January 12.—Manchester cotton production in excess of sales. Yarns are cheaper.

THE DRY GOODS MARKETS BY TELEGRAPH.

From Portland, Me.: Owing to the conservative feeling which prevails, there will not be a large movement in making up stocks of dry goods.

From Boston, Mass.: There is no material change in the dry goods trade. Business is fair and, in some lines, a little more active, but it is rather early for the usual volume of trade. With few exceptions, the trade report the outlook favorable and collections good. The woolen goods trade is quiet.

From Providence, R. I.: The print-cloth market is easier than last week, with more demand. The amount of sales is reported as small; 64s are quoted at 3⅝c. and 56x60s at 3 3/16c. There are about 163,000 pieces on hand. The cotton market is quiet, the amount of sales being moderate. Middling uplands are quoted at 10⅝c. and middling

gulfs at 10⅞c. The stock on hand is of about the same amount as last week.

From Philadelphia, Pa.: The jobbing trade has ruled seasonably quiet in all departments; but package buyers have been operating more freely in dress goods, white goods, prints, etc., for the spring trade. Deliveries have been impeded by the accumulation of snow in the streets. The general market closes steady for fine and medium woolens and standard brands of brown and bleached cottons, but low grade woolen and mixed fabrics and colored cottons are mostly in large supply and weak.

From Cleveland, Ohio: The dry goods trade, in common with other lines, in January, is quiet, but not unsatisfactory for the month.

From Columbus, Ohio: Trade in dry goods reported about the same as last week, and still suffering some from holiday depression. Banks quote collections still only fair.

From Toledo, Ohio: Dry goods trade better than usual for the season. Collections fair.

From Indianapolis, Ind.: The dry goods trade is quiet, but the outlook is good for an improving trade.

From Chicago, Ill.: Dry goods trade quiet with fair sales in heavy lines. Jobbers anticipate better sales with improved weather.

From Detroit, Mich.: In dry goods no noticeable change is reported in the general condition of trade or collections since last week, and but little is looked for for a week or two.

From St. Louis, Mo.: The dry goods trade has opened in much better volume than at the same time last year. Cottons have suffered a fresh decline, but otherwise prices are steady and not weakening with eastern markets. Cotton market a little brighter, with heavier sales on slight advances; stock on hand smaller than last January by 20,000 bales.

From Burlington, Iowa: Dry goods movement fair for the season. No special demand. Weather very cold.

From Minneapolis, Minn.: Dry goods slow but with more demand than usual at this season. Preparations are being made for a large rising trade in all lines. Collections generally good.

From St. Paul, Minn.: Sales in dry goods reported easy.

From Omaha, Neb.: Dry goods sales are still light.

From San Francisco, Cal.: There has been no change in the situation of the dry goods trade since last report.

From Baltimore, Md.: The dry goods trade the past week had no special feature. Sales were not large, and very few houses appear to have recovered from the effects of taking inventories and settling up the old year's affairs. Manufacturers continue hopeful of a good spring trade, are cautious, and keep their affairs well in hand.

From Wilmington, N. C.: Dry goods jobbing and retail trade dull.

From Savannah, Ga.: Dry goods quiet in selling, but busy in restocking.

From Nashville, Tenn.: Dry goods trade quiet, with light demand.

From Memphis, Tenn.: Wholesale dry goods jobbers report business as continuing dull, but shipments are a shade heavier than last week.

COTTON.

The total receipts of cotton at the ports since September 1 are 3,830,093 bales, against 3,347,823 bales for the same time last year. The receipts at the ports for the week are 172,202 bales, against 224,735 bales last week and 104,024 bales for the corresponding week last year. The receipts at the twenty-four interior towns usually reported for the week are 46,701 bales, against 60,625 bales last week and 30,872 bales for the corresponding week last year. The shipments for the week were 62,709 bales, against 58,199 bales last week and 47,499 bales for the corresponding week last year. The stocks for the week were 341,740 bales, against 345,884 bales last week and 394,442 bales for the corresponding week last year. The New York cotton market has been lower for spot middling uplands, and the price has advanced to 10 3/16c. The future market has advanced an average of 4 points for near months and 2 points for later months. Below will be found the closing quotations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
Ordinary	7½c.	7 9-16c.	9 5-16c.
Strict ordinary	7 15-16	8	9⅞
Good ordinary	8¾	8 13-16	10 11-16
Low middling	9 11-16	9 11-16	11 9-16
Middling	10 3-16	10⅛	12
Good middling	10	10⅜	12⅛
Middling fair	11¼	11 1-16	13⅛
Fair	12	11 13-16	13⅞

The New York spot market closed quiet and steady.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
January	10.08c.	9.98c.	11 93c.
February	10.12	10.10	12 17
March	10.26	10.24	12 38
April	10.40	10.38	12.60
May	10.54	10.52	12.78
June	10.68	10.66	12.91
July	10.80	10.77	13 03
August	10.91	10.89	13.12

New York market for futures closed dull, but firm.

COTTON REPORTS BY TELEGRAPH.

From Savannah, Ga.: The weather has been stormy, with much rain; now clear and bracing.

From Helena, Ark.: Continued bad weather leaves one-fourth the cotton in the field.

From Dallas, Tex.: The weather has been fine for the past week, but cotton receipts light, owing to bad condition of roads; cotton grading lower; stained and somewhat trashy from rains of last week; average price, 8¼c.

From Wilmington, N. C.: Weather cold, with copious rains. Cotton receipts light; prices higher.

WOOL.

Seaboard wool markets have developed increased activity and firmness during the past week. There has been no great rush of orders, but manufacturers have generally bought with more freedom, and there has been much less haggling about prices. Fine fleeces have brought better prices than were obtainable at the close of the year, and the general market has exhibited more strength. The December stock inventories in Boston, Philadelphia and New York show an aggregate decrease in the available supply of domestic and foreign wools of 4,648,500 pounds as compared with the close of 1881. The falling off is particularly noticeable in washed fleeces, of which there has been a decrease of about 1,800,000 pounds in Boston and upward of 1,100,000 pounds in Philadelphia. The supply of worsted wools is very small in all markets. Mills on this class of goods are more actively employed than in any other branch of woolen production, and the demand for the new staple is so urgent that some improvement in prices is generally anticipated. A positive scarcity of these long-staple wools is probable before the new clip begins to come forward. Foreign markets are cabled better for clothing and combing fleeces, but dull for carpet wools. Home mills are generally timing production to avoid surplus stocks at the close of the season, but the finer qualities of clothing woolens are not in excessive supply, and, while there is some accumulation of trashy goods, the general outlook is encouraging.

IRON.

There has been no improvement in the iron market during the past week. Sales of pig iron have been made at less than currently quoted rates, small lots only bringing full figures. The tendency in pig is still downward, notwithstanding the generally expressed feeling a month ago that prices had touched bed-rock. Furnaces are still working from hand to mouth, and the outlook at the leading iron centers continues unfavorable. West, or rather southwest and south, the feeling is better, and the opinion is expressed in those regions that the end of the month will witness an improvement in demand and, consequently, in prices. Of Scotch pig iron at New York, there have been from 800 to 1,000 tons sold during the week, mostly to arrive, and on private terms. Some few small lots were sold at full figures, which still continue at the low rate previously referred to. Finished iron remains quiet and extremely dull, and prices are quoted from 2.3@2.35c. to 2.6c. for the various grades. Demand is low. Inquirers in the market are mostly there to learn what the outlook is, and transactions are few. A canvass among different members of the pig and finished iron trades reveals the fact that the prevailing uneasiness is largely due to the uncertainty which prevails respecting the outcome of the tariff tinkering now going on in Congress. It is believed that the uncertainty itself is responsible for this state of affairs. Whether the rate of duty on this, that or the other variety of iron is to be what the tariff commission proposed or what Congress itself has suggested, or what various interested parties have requested, has not so much to do with the existing paralysis of the industry as the fact that the final rate remains unsettled and that no immediate settlement is in sight. Steel rails continue to be quoted at $40. Small lots for early delivery command $41. No new orders for rails in any considerable quantity are reported. Still the belief prevails among those who are well informed that the prospect for an advance in steel rails is good, and that such will take place at no far distant date. The Western Pig Iron Association held a meeting at Pittsburgh on Thursday and resolved to send a commission to Washington to recommend that the tariff commission's suggestions as to the rate of duty on pig iron be adopted. The report, widely published, that several western nail mills have refused to shut down for four weeks in accordance with the recent decision of leading manufacturers in convention assembled, is officially denied. The impression exists among prominent members of the iron trade that the report given out to the New York daily paper reporters on January 5, of the meeting of the eastern pig iron manufacturers, was especially prepared for the New York press, inasmuch as many members of the meeting preferred not to permit, as they alleged, a free-trade press to know just what their remarks and recommendations were respecting the tariff.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, January 12.—Northern iron markets flat; finished 2s. 6d. lower. The prices of Staffordshire are barely steady. Iron for ship-building keeps in good request.

DOMESTIC IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: There has been a fair business in small lots, but few large transactions, and the competition among sellers has been greater during the past week. Standard brands of pig are barely steady, and inferior brands are weak. Merchant bar is selling quietly for immediate wants at 2.30@2.40c. Steel rails are in fair request, and small lots are selling at $40@$41. Old material is dull and weak. Winter requirements for iron and steel of all kinds will keep all mills engaged.

From Cleveland, Ohio: In the iron markets there is little if any change to note. Prices are unchanged, and as the season advances a better movement, with improved conditions governing the trade, is anticipated.

From Chicago, Ill.: Hardware dull. Bar and sheet iron plenty, weak; fair sales. Nails, fair demand; prices steadier, with less desire to sell. Pig iron weak and dull; American fair supply; no Scotch. A few contracts for steel rails.

From Detroit, Mich.: In iron there is rather a brighter outlook reported. A slight advance in prices of boiler tubing is noted, and in heavier lines prices are steady, with an indication of a tendency to advance.

From St. Louis, Mo.: The demand for manufactured iron is improving with firm values, which tend to advance. Pig iron stocks are growing light, and the demand is growing a little more active. Our mills mostly have a fair amount of orders on hand.

COAL.

The anthracite and bituminous coal trades continue dull. The movement of coal has declined rapidly since the middle of December, and the present tendency is for stocks to accumulate. There has been some more talk during the week as to the necessity of stopping work during the closing weeks of January, but no general decision has yet been reached by the presidents of the leading anthracite companies. An enforced stoppage is reported by the Pennsylvania Company, due to an accident. The drouth in Luzerne and Lackawanna counties, in the Schuylkill coal field, and elsewhere in the Pennsylvania anthracite regions, resulted in increasing the cost of mining during the late fall and winter. The outlook for the anthracite business during 1883 is believed to be for an improvement on the quite satisfactory record made in 1882, as special arrangements have been completed for shipping larger quantities of anthracite coal to the west than ever before. It is added that the demand for that variety in the west has greatly increased during the past year. The latest figures as to production of coal for 1882 confirm the estimates made in this journal several weeks ago. The figures are as follows:

	Total tons mined. 1882.	1881.
Anthracite	29,194,000	28,500,000
Bituminous	4,521,000	5,150,000
Total Pa. and Md. coal mined	33,715,000	33,650,000
Increase, 1882 over 1881—Anthracite	694,000 tons	
Decrease, 1882—Bituminous	529,000 tons	
Net increase 1882 over 1881	165,000 tons	

The falling off of a little over half a million tons of bituminous coal, mined by the large companies, is due, of course, to the prolonged stoppage of work in the Clearfield and Cumberland districts, owing to the strike among the miners. The formation of a new company to work in the Clearfield region, with a capital of $5,000,000, is looked on as indicating a largely increased production of "soft coal" during the coming year.

PETROLEUM.

On Saturday last the speculative market for certificates of crude petroleum advanced somewhat, the closing price being 88¼c., against 86⅞c. bid at the close on the Friday preceding. This climbing of prices was viewed askance by cautious operators; that is, by a very few dealers on 'change, for the Schultz and other wells were still unheard from, and any upward movement in the face of possible reports as to the coming in of "gushers" was properly avoided. On Monday the morning session was quiet and uneventful. In the afternoon word was received that the Schultz well had come in, and was flowing heavily. The market dropped from 89¼c. to 83¾c. only, before further news was received to the effect that the Clark & Foster well, two miles east of the Schultz, heretofore doing about 30 barrels, had run dry. At this prices advanced again, and the market gathered some strength. At the close the quotations were 88¼@88⅜c., just where they were on Saturday evening. Tuesday experienced no special excitement. The Schultz, which opened out with a flow of 700 barrels and upward, had dropped to a little over half that rate, which stamped it as of less calibre than had been thought probable. In short, its effect had practically been discounted during the ten days the market had been waiting for it to make an exhibition of its staying qualities. The Clark & Foster well, named above, was announced authoritatively as dry, and the Reed & Brenneman well, near the Reno well, was reported in, but with no figures as to rate of flow. The failure of new wells in favored localities and intermittent character of the production of others, together with the total exhaustion of many after a few days of life, had characterized the Forest county territory as "spotted," and, to date at least, have banished all probabilities of its becoming anything of the nature of "a second Cherry Grove." Owing to this view of the situation, the market advanced on Tuesday. The opening was at 90½c., and the close at 89⅛@89¼c., a gain of ⅞c. over the quotations of the previous evening. Wednesday developed the unexpected to such a degree and from so many quarters that the market became anybody's. Considerable excitement prevailed, and the day's trading at the various exchanges was large. The morning session witnessed a gradual decline of nearly 3c., undoubtedly engineered in order to permit those on the inside to load up and take advantage of the statement of the United Pipe Company, published during the morning session, that the aggregate stocks in the company's tanks had declined from 33,474,792 barrels on December 1 last to 31,790,242 barrels on the 1st inst. This precipitated a bull market, as was to be expected, and prices advanced rapidly to 95c. This looked as if a nice profit of about 7c. per barrel awaited the fortunate purchasers of the early morning. But before an opportunity to realize was permitted a bomb was thrown into the exchanges in the shape of a dispatch that the Reed & Brenneman well was flowing at the rate of 1,500 to 2,000 barrels daily. Prices tumbled at once to 90c., and the decline continued until 86½c. was reached. The strain was relaxed at that juncture by word from the regions that the disturbing well was declining rapidly in production and that the prospects were that it would be short-lived. The market thereupon strengthened and prices advanced to 90¼@90⅜c. As may be supposed, the day's business was largely of that character which may be likened, in the effect produced on the operator, to sliding across thin ice on a deep pond. The closing sales were made at 90¼@90⅜c., a gain of 1⅛c. over the closing quotations on Tuesday. Thursday was quieter. The Schultz well had got down to 400 barrels daily, and the Reed & Brenneman well was said to be draining the Reno well pool. This naturally stimulated a better feeling. Prices were well maintained, and closed at 90c. bid, but ¼c. under the close on Wednesday.

The market yesterday opened strong at 90c. Trading during the day was fair, but no special tendency to advance was exhibited, owing to the expected coming in of a third would-be "gusher" in Forest county. The Reed & Brenneman well has declined to 300 barrels from 1,500 and more barrels on Wednesday, and the Reno well to 250 barrels. The Schultz well is down to 250 barrels and tending downward. At 1.45 P. M. yesterday the quotation was 89¾c., and the market was firm but quiet. At the close the price was 90c. against 86⅞c. on Friday of last week, a gain of 3⅛c. on the week. During the afternoon the market was dull and very quiet in anticipation of the Patterson well's

coming in, which may be reported at any hour. Transactions were very light.

Up to Wednesday evening refined oil, case oil and naphtha remained at quotations made on Friday evening, January 5, with a dull market. On Wednesday afternoon prices were advanced ⅛c. all round on refined, with crude in barrels ⅛c. off. The closing prices of petroleum and petroleum products at New York last evening, as compared with those one week ago, were as follows:

	January 5.	*January 12.*
United pipe-line certificates.....	86⅞ bid.	90 bid.
Refined oil, 110° test.....	7⅜	7½
Refined oil, 70° Abel test.....	7½	7⅝
Case oil, plain brands.....	10¼	10¼
Crude, in barrels, New York.....	7@ 7½	6⅞@ 7⅜
Naphtha, per gallon.....	6¾	6¾

The total export from the United States of petroleum for the week ending January 6, were 6,099,349 gallons, crude equivalent, against 9,528,323 gallons during the week ending December 30, 1882, a decrease of 3,428,974 gallons. The shipments during the opening week in 1882 were but 5,858,289 gallons, so that the exports in the first week of the current month show an increase of 241,060 gallons, as compared with those made from January 1 to January 882.

OCEAN FREIGHTS.

But little has been doing in this line since the last report. A number of petroleum vessels arrived in port a few days since, but stiff rates were asked and shippers were disinclined to pay them. Europe still hangs off in the matter of purchasing petroleum, due principally to heavy stocks at a number of points and a distrust of the sort of jack-in-the-box condition of the speculative market for petroleum here. The exports of petroleum during the opening week of the year were somewhat larger than in the corresponding week of 1882, but about 3,000,000 gallons less than in the week ending December 30, 1882. Grain charters have been limited at New York, although engaged with some freedom at Philadelphia and Baltimore. Berth room has been in the customary demand at unchanged rates. The excessive rates and general scarcity of ocean tonnage which have prevailed during late months should succeed in bringing to this and other American ports such outside vessels as are supposed to be continually in search of the best-paying routes for carrying freight. At least this is the solution which has been offered for the ocean-tonnage squeeze by leading brokers from week to week for some time past. The belief is confidently expressed by them that such relief must come, and with it an unloosening of surplus domestic products which have been, and are still, waiting favorable terms to go abroad in liberal quantities.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: There has been no change of quotations. General trade, though quiet the first two weeks, fully equals the same period last year; yet a more conservative feeling prevails and there will not be so much stocking up.

From Boston, Mass.: In boots and shoes there is not much new business doing, but buyers are beginning to realize that they have bought too sparingly and will probably be clamoring for goods before the season is over. The shoe factories are nearly all busy on orders, and the shipments are larger than in the second week of any previous year. Shipments to places outside of New England during the week 43,832 cases, against 30,473 cases the second week of 1882. Total shipments since January 1, 74,305 cases, against 60,203 cases same time last year

MIDDLE STATES.

From Philadelphia, Pa.: General trade has been quiet during the past week. The snow blockade in the streets has made transportation slow and difficult, and this interruption of deliveries has contributed to intensify the dullness in some departments. The general outlook is not unsatisfactory. Values, with few exceptions, have ruled pretty steady. Local textile production continues to be embarrassed by the slow market for low grades of cotton and woolen goods; but the stoppage of so much machinery within the past few months is expected to relieve the market and work out a gradual improvement in the situation. Other industrial interests are generally well employed. The grain trade has ruled very quiet. Vessels are scarce, and there is not much doing on foreign orders either for grain or petroleum. Two firms at the Commercial Exchange have refused to settle December corn contracts at the "corner" price, and one, whose case was made a test to determine the other, has been suspended from floor privileges under the rules. It is expected that the right of the exchange to keep a stockholder off its floor will be contested in the courts. The flour trade is moderately active, and values are firmly maintained. Butter is accumulating and declining. Provisions are dull. Groceries steady but quiet.

WESTERN STATES.

From Cleveland, Ohio: General wholesale trade is quiet, and will doubtless so continue throughout January. The business of the month compares fairly with other years. Country collections are not as satisfactory as hoped for.

From Columbus, Ohio: General trade, while by no means stagnant, is giving only fair satisfaction.

From Dayton, Ohio: General trade dull. Collections reported slow.

From Toledo, Ohio: General trade reported satisfactory.

From Evansville, Ind.: Millers report an active increasing demand for flour the past ten days; prices have advanced 25c. per barrel, and, as the prospect is for a further rise, dealers are buying quite freely. Wheat is strong, 95c. and $1 being asked; stocks are reported very light, and only about 30 per cent. of the crop remains in farmers' hands; several country mills will probably close for want of grain. Corn is moving slowly, the demand being mostly local.

From Indianapolis, Ind.: Trade is not yet brisk but improving, and merchants are quite confident of a good spring trade. Weather very cold. Terre Haute reports trade satisfactory, and collections very fair; a good spring trade is anticipated.

From Detroit, Mich.: Grocers report fair trade and collections for the season, with matters generally about the same as last week.

From Louisville, Ky.: The business situation is quiet, with expectations of a good season. General merchandise stocks are perhaps larger and prices somewhat lower than a year ago, but consumers seem to be in better condition to satisfy their wants. Hides and wool quiet. Leather in fair inquiry. Whiskies easy and in moderate movement. Leaf tobacco firm and active at full prices. Cotton dull.

From St. Louis, Mo.: General trade is quiet, but compares well with former years at this time. A light inquiry for tobacco has developed. All grains are higher and active, but unsettled.

From Burlington, Iowa: Produce trade dull; shipments and receipts run light on account of the cold weather; dealers report the supply equal to the demand, with an upward tendency in some goods.

From St. Paul, Minn.: Trade in merchandise has been limited compared with the close of December. Traveling men are out, but active business is not expected for a month. Boots and shoes, hardware, groceries, clothing in easy sales. Aggregate volume greater than year ago. Money fair demand. Banks have no surplus loanable funds and are shipping currency east to keep up balances; shipments west are light.

From Minneapolis, Minn.: Weather continues cold throughout the northwest, with good depth of snow, but no storms to interfere with railroads or general travel. Such a winter in the past has been succeeded by large crops the following season. The season is well adapted to the lumbering operations, and is being well improved. The cut of logs for next season will be larger than usual. Lumber market quiet, but firm. But little wheat is being marketed by farmers, as it is generally held for higher prices; about one-half the crop has been sold; receipts for the week 397,000 bushels; market closing firm at an advance. Flour has ruled firm at a slight advance, with more demand and diminished production; shipments for the week, 98,000 barrels. General trade is quiet; jobbers report moderate orders for articles to sort up; but little activity. Country dealers are meeting their bills promptly. A rather close money market is reported.

From Omaha, Neb.: Trade is still quiet in all lines, and collections poor. An increased number of failures are looked for during the coming two months, owing chiefly to farmers holding on to their grain for better prices and not meeting their paper.

CALIFORNIA.

From San Francisco, Cal.: There has been no change in the business situation since report of last week.

SOUTHERN STATES.

From Baltimore, Md.: The volume of business the past week was very light, and merchants do not expect any activity of consequence until the latter part of this month. The transactions in grain were small; southern was firm, with few receipts, and western is quoted steady. The inquiry in the flour market continued good and the sales werev ery fair; there was also a shade of improvement in prices. Cotton was dull, and no late sales were heard of. The refined petroleum market is unsettled and irregular, but prices remain unchanged. The provision market is characterized by lower prices, but continues firm and active at a decline. The inquiry for ocean charters was moderate.

From Richmond, Va.: The weather is bad and business in all lines quite dull.

From Norfolk, Va.: Trade in all departments dull, occasioned by the severity of the weather. Freight trains on all roads are not running on time; receipts are consequently small. Collections only fair.

From Wilmington, N. C.: Spirits turpentine, rosins, tar and crude turpentine steady. Timber scarce and wanted. Lumber and shingles steady. Provisions, grain and breadstuffs, demand good and prices advancing. Freights—foreign firm, coastwise flat.

From Savannah, Ga.: The jobbing trade not fully opened, but receiving goods by every steamer preparatory to meeting orders for spring. There is a slightly better feeling in the cotton market, with more demand. Rice more active; prices steady. Few transactions of moment in naval stores. Retail trade kept up fairly, and merchants generally have made better average deposits than is usual at this season.

From Dallas, Tex.: Wholesale dealers state that they have no cause to complain.

From Houston, Tex.: Jobbing trade reports fair orders from the country, and collections good.

From Memphis, Tenn.: Business in all lines continues rather quiet. Feedstuffs are dull, and prices show no improvement. Country products are bringing better prices, as the cold weather makes it easy to handle and keep.

From Nashville, Tenn.: The general trade of the week shows considerable improvement over last week. Flour generally quiet, steady, and more active, with a good demand for the higher grades. Corn is in good demand; receipts light. Country produce in good demand; receipts light.

TRADE EMBARRASSMENTS.

There were 342 failures in the United States reported to BRADSTREET'S during the past week, 85 more than the preceding week, 139 more than the corresponding week last year and 164 more than the same week in 1881. The majority of the failures were small. The middle states had 79, an increase of 19; New England states 30, a decrease of 16; southern states 118, an increase of 57; western states 93, an increase of 15; Pacific states and territories 22, an increase of 10; Canada and the provinces 19, an increase of 11. Among the important failures were the City Bank and the Fifth Ward Savings Bank, of Jersey City; S. Marcus & Son, dry goods, Brooklyn, N. Y., and Mobile, Ala.; Charles H. Schad, general store, etc., Wolcottville, N. Y.; F. J. Dixon, wholesale grocer, Milwaukee; Eddleman & Bowie, shoes, Atlanta, Ga., and Rountree & McClure, wholesale grocers, San Francisco. In the principal trades they were as follows: General traders 64; grocers 60; dry goods 21; fancy goods 19; liquors 19; shoes 18; clothing 18; hardware 13; millinery 12; manufacturers 11; jewelry 8; drugs 8; bakers and confectioners 8; hotels and restaurants 7; produce and provisions 6; tobacco and cigars 5; books and stationery 5; gents' furnishing goods 5; hats 4; butchers 4; grain 3; furniture 3; crockery 3; commission 3; banks 2.

ALABAMA.

COLUMBIA.—S. Bealle & Co., general store, have assigned.

EUFAULA.—Duskin & Grimes, grocers, have failed. Liabilities about $9,000; nominal assets $7,500.

GREENPOND.—J. B. Schackelford, general store, has been closed by the sheriff.

LAFAYETTE.—B. B. Hart, general store, has failed.

LAFAYETTE.—J. H. Murphy & Co., general store, who recently assigned, owe about $18,000.

MARION.—J. B. Buchanan & Co., grocers, have assigned.

MOBILE.—S. Marcus & Son, dry goods, have assigned to A. J. Moses. The main house was in Brooklyn, N. Y.

SELMA.—Henry Delury, grocer, has assigned.

SELMA.—W. G. Jaens, confectioner, has failed.

SELMA.—W. D. Pickard, grocer, offers to compromise at 50 cents.

ARIZONA.

TUCSON.—Henry Kiesel, saloon, has been attached.

TUCSON.—Theodore Welisch & Co., dry goods and millinery, have assigned. Liabilities $75,000; preferred claims $40,000. The goods were all purchased and payments made in New York in the name of L. Wolf & Co., both firms being identical, and were sold at Tucson. It is said they did too large a business for their capital, became overstocked and slow in payments. They promised to make a public statement of their condition last July, but did not do so, and confidence of their creditors was shaken, and the failure was not unexpected.

ARKANSAS.

FORT SMITH.—J. Karatofsky, grocer, has assigned. Liabilities $12,000; assets $7,000.

HELENA.—J. D. Jones, grocer, has failed. Liabilities about $1,000; assets nominal.

HELENA.—H. Simon & Co., shoes, have assigned. Liabilities about $6,000; assets about $6,000; preferred claims $5,000.

HOT SPRINGS.—Thomas I. Farmer, grocer, has failed.

INDIAN BAY.—H. & L. Silverman, general store, have been attached.

CALIFORNIA.

BAKERSFIELD.—A. O. Thoms, hotel, has filed a petition in insolvency.

BERKELEY.—R. Huston, grocer, has been attached.

BODIE.—H. F. Cavin, has filed a petition in insolvency.

BODIE.—J. N. Summers, grain and hay, has filed a petition in insolvency.

COLTON.—G. A. Strickland, hotel, has been attached.

LIVERMORE.—Corbett & Sagar, butchers, have been attached.

OAKLAND.—L. Frauneder, wire railings, has been attached.

OAKLAND.—E. A. Hubbard, general store, has filed a petition in insolvency.

SAN FRANCISCO.—J. Franklin, hotel, has filed a petition in insolvency.

SAN FRANCISCO.—Charles Goebel, baker, has been attached.

SAN FRANCISCO.—Creditors have filed a petition in insolvency against Kim Chong & Co., merchant tailors.

SAN FRANCISCO.—J. C. Moritz, butcher, has filed a petition in insolvency.

SAN FRANCISCO.—C. S. Neal, stock broker, has filed a petition in insolvency.

SAN FRANCISCO.—Edward Newman, restaurant, has filed a petition in insolvency.

SAN FRANCISCO.—Rountree & McClure, wholesale grocers, have suspended. Liabilities $69,000; assets $52,000. They began in January, 1878.

SAN JOSE.—B. L. Ryder, grocer, has been attached.

SAN FRANCISCO.—Simon Sweet, trading as Simon Sweet & Co., produce commission, has been attached and application made to force him into insolvency.

SAN JOSE.—J. R. Bell, carpenter, has filed a petition in insolvency.

SANTA PAULA.—S. P. Guiberson, drugs, has been attached.

SONORA.—N. F. Pickle, saloon, has filed a petition in insolvency.

COLORADO.

DENVER.—Brown & Boon, market, have been attached for $550.

DURANGO.—S. Goodrich, liquors, has assigned.

LEADVILLE.—John Calderwood, saloon, has been closed on execution.

PUEBLO.—Stoker & Ebbert, millinery and dry goods, have assigned to Mr. Stoker's uncle. They recently claimed assets $18,800; liabilities about $10,000.

CONNECTICUT.

HARTFORD.—George Sichler, brewer, has obtained an extension of six months on liabilities of about $20,000. He built an expensive brewery which cost $125,000, and is mortgaged for $50,000, which was a heavy load to carry.

NEW HAVEN.—E. G. Cummings, meat market, has assigned.

NEW HAVEN.—The Wetmore Machine Company have assigned to Judge L. B. Morris. A. C. Wetmore, the treasurer, has attached the property for $100,000. He is believed to have been obliged to do this to save himself for what he invested in the company, and it is thought that nearly all the liabilities are to him. The company succeeded the A. R. Paine Machine Company in November, 1876, and had a paid in capital of $60,000.

DAKOTA.

FARGO.—F. N. Smith, gents' furnishing goods, has assigned.

GRAFTON.—F. Hughes & Co., hardware, have failed.

VALLEY CITY.—F. C. Hillenbrand, clothing, has assigned.

DISTRICT OF COLUMBIA.

WASHINGTON.—J. J. Hundley, dry goods, has assigned. Liabilities $900; nominal assets $700; preferences $300.

WASHINGTON.—A. R. Williams, Jr., hardware, has assigned, and the preferences cover everything.

FLORIDA.

FERNANDINA.—J. O'Boyle, general store, has turned his stock over to a creditor to secure a claim, leaving nothing, it is said, for outside creditors.

GEORGIA.

ANDERSONVILLE.—Hugo Richter, general store, has failed.

ATLANTA.—G. W. Bobo, grocer, has failed. Liabilities $800; assets $200.

ATLANTA.—J. A. Caldwell, grocer, has failed.

ATLANTA.—J. D. Cleaton, grocer, has been closed by the sheriff.

ATLANTA.—Eddleman & Bowie, shoes and leather, have assigned to C. S. Kingsberry. Liabilities $66,000; assets $61,000. Mr. Eddleman has been ill for a year past. They succeeded Eddleman & Brown January 1, 1879.

ATLANTA.—J. C. Watkins, grocer, has failed.

AUGUSTA.—Pe'ot & Cole, photographers' picture frames, have failed and sold out. Liabilities $7,000; actual assets $2,000; preferences $1,850.

BLAKELY.—S. H. Powell, general store, has failed.

CONVERS.—Irwin & Brother, general store, have failed.
ROME.—W. F. Greene, grocer, has failed and sold out.
SAVANNAH.—I. S. Davidson, shoes, has assigned. Liabilities $17,000; assets $13,000.
TURNERSVILLE.—J. W. Dooley, Jr., general store, has failed.

ILLINOIS.

CHICAGO.—Charles Beck, hats and gents' furnishing goods, has been closed by the sheriff.
CHICAGO.—James Goldberg, furniture, has been closed by the sheriff.
CHICAGO.—Julius Gottheimer, grocer, has been closed by the sheriff.
CHICAGO.—Sigmund Sinsheimer, clothing, has been closed by the sheriff.
EFFINGHAM.—H. A. Funkhouser, general store, has assigned.
HAVANA.—Theodore Stevenson, general store, has assigned. Judgment for $1,600 was entered against him.
HIGHLAND.—Arnold Stocklin, saddler, has been closed by the sheriff, and is said to have gone to New Mexico. Liabilities $10,000; actual assets $3,000.
LINCOLN.—Charles Heinze, grocer, has assigned. Liabilities about $3,000.
LINCOLN.—W. O. Snyder, saloon, has been closed by the sheriff.
MACKINAW.—H. W. Hill, books, has failed.
PEKIN.—S. Harris, dry goods and shoes, has assigned.
ROCK ISLAND.—Richard Crampton, books, has failed, assigned and sold out to Crampton & Co., it is said, to secure them for the amount he owed them. The liabilities are estimated at $41,000.
SALEM.—De Golyer Brothers, grocers, have assigned.

INDIANA.

EVANSVILLE.—Joseph Morris, clothing, has assigned to I. I. Lowenstine. Liabilities about $7,000; assets $3,500.
FORT WAYNE.—Saylor Brothers, millinery, have assigned.
GOSPORT.—Philip W. Hale, grocer, has compromised.
INDIANAPOLIS.—A. V. Lawrence & Co., commission, have assigned. Liabilities $3,000.
INDIANAPOLIS.—Charles H. Mueller, jeweler, has assigned. Liabilities $2,000; assets $834.
KENDALLVILLE.—A. T. Ross, shoes, has failed.
KOKOMO.—Armfield & Nation, shoes, dissolved, and Mr. Armfield assigned.
KOKOMO.—H. G. McGlone, grocer, has failed and turned his stock over to a creditor.
NEW ALBANY.—Mrs. A. E. Sparrow, milliner, is offering to compromise at 20 cents.
NEW PALESTINE.—A. P. Hogle, miller, has assigned.

IOWA.

ALGONA.—L. M. B. Smith, hardware, has assigned.
CLINTON.—W. A. Bignall, grocer, has failed. He previously gave two chattel mortgages for $9,268, which covered all the stock and accounts. He owes about $5,000 more, on which he says he can pay nothing.
DAVENPORT.—T. Richter & Co., hats and caps, were burnt out and assigned. Mortgages for a large amount were filed on their real estate.
IDA GROVE.—C. L. Finley, hardware, has failed.

LITTLETON.—Bickford & Nelson, dry goods, have failed and gone out of business. Liabilities $4,100. They offer 75 cents.
PEMBROKE.—H. L. Flanders, fish, offers to compromise at 33 cents.

NEW JERSEY.

CAMDEN.—Charles H. Davenport, grocer, has been closed by the sheriff.
JERSEY CITY.—The City Bank and Fifth Ward Savings Bank suspended on the 10th inst. Garret S. Boice, the president of the former and treasurer of the latter bank, who managed both concerns, is charged with wrecking the former bank, and was arrested for alleged embezzlement. Cashier Shaw, of the City Bank, is accused of taking $20,000 of the funds some time ago, and Mr. Boice says that since he discovered it he had been endeavoring to carry the bank through; it had been a losing concern for a long time past, and he endeavored to get the directors to wind it up and pay their share of the deficiency. He transferred securities from the Savings Bank to the City Bank to protect the latter. It is said the deficiency of the City Bank is $100,000, and that there are only $10,000 assets left. The annual report, issued on the 3d inst., claimed resources $116,014; liabilities, exclusive of capital stock, $66,014. Washington B. Williams has been appointed receiver. The bank was started about twelve years ago with a capital of $100,000, of which $50,000 was paid in. The directors of the Savings Bank allege that Mr. Boice took $25,000 in bonds and $24,639 in money from the bank and put the latter to the credit of the City Bank. The liabilities of the savings bank are $429,936, all but $30 of which is due depositors. The nominal assets are $425,594, which include deposits in the City Bank $24,639, which is valueless, and $24,500 bonds hypothecated by Mr. Boice to the First National Bank.
NEWARK.—David J. & Israel H. Gerry, produce, have failed. Liabilities $3,000; no assets.
NEWARK.—Spencer C. Tuers, manufacturer of paints, assigned on the 9th inst. to Charles E. Hill, having previously given a chattel mortgage for $300.
TRENTON.—Daniel V. Brewer, tobacco, has assigned.
TRENTON.—Louis Raphael, tinware, has been attached.

NEW MEXICO.

PERCHA CITY.—Michael Neason, saloon, has failed.

NEW YORK.

ALBANY.—Campbell Brothers, stoves and hardware, have assigned to W. W. Thompson.
ALBION.—Sarah A. Tubbs, millinery, has assigned to Ezra T. Coam.
BROOKLYN.—James F. Kelly, shoes, has assigned.
BROOKLYN.—S. Marcus & Son, fancy goods and notions, assigned on the 6th inst. to Abraham Siegel, giving preferences for $4,100. They had a branch at Mobile, Ala., which was managed by S. Marcus, Jr., and the assignment of the latter business to A. J. Moses, of Mobile, was followed by the assignment in Brooklyn. Mr. Marcus, Sr., says the liabilities are about $60,000. The business in Mobile was established many years ago, and the store in Brooklyn was started about three years ago. They formerly had a branch at Pensacola, Fla.
BROOKLYN.—Frederick Mattfield, grocer, has assigned.
BUFFALO.—The schedules of L. H. Best, petroleum broker, show individual liabilities $606; nominal assets $3,932; actual assets $3,672. He was associated with W. D. Archbold, of Titusville, and their joint liabilities are $49,800; nominal assets $65,748; actual assets $10,011.
BUFFALO.—H. J. Ernst, planing mill, who was sold out by the sheriff, owes $4,000; actual assets $407.
BUFFALO.—J. H. Isham, jeweler, has assigned.
BUFFALO.—William Wright, millinery, has assigned to William M. Hawkins.

NEW YORK CITY.—Henry Orths, tailor, assigned on the 8th inst. to Amos D. Le Fevre, giving a preference for $350. Liabilities $2,996; nominal assets $2,233; actual assets $916.
NEW YORK CITY.—Bartholomew Peck, printer and stationer, assigned on the 12th inst. to George W. Barnett. Liabilities $3,500; assets $2,000.
NEW YORK CITY.—John Scheid, shoes, assigned on the 8th inst. to Morris Dehonc, giving three preferences for $1,362.
NEW YORK CITY.—Samuel Stolz, wholesale gents' furnishing goods, assigned on the 11th inst. to Ellis Morris, giving two preferences for $950.
NEW YORK CITY.—George Wahlheimer, wines, assigned on the 9th inst. to George Wahlheimer, Jr., giving a preference to John H. Miller for $1,500. He began business in 1860. Liabilities $9,108; actual assets $4,629.
NEW YORK CITY.—The schedules of Frank N. White & Co., toy wagons, show liabilities $33,033; nominal assets $17,176; actual assets $2,311.
ROCHESTER.—The John Cowles Shoe Company offer to compromise at 40 cents, 25 cents cash and 15 cents in six months.
RONDOUT.—Edward Dreyfus, clothing, has assigned.
SENECA.—Mrs. S. L. Blodgett, millinery, has assigned to W. A. S. Pollard.
SOMERSET.—William B. Aris, general store, has assigned.
SYRACUSE.—Auchampaugh & Greeley, millinery, have assigned to J. W. Page.
TROY.—Thomas A. Byram, trading as M. H. Byram & Son, merchant tailors, has assigned to Peter L. Haskell. Liabilities $12,000; nominal assets $7,000; actual assets $5,000; preferences $6,000.
TROY.—J. E. Glendenning, linen goods, has assigned to Joseph Hicks, giving preferences for $4,500.
UTICA.—The liabilities of Henry C. Welton, shoes, are about $15,000; actual assets $11,714.
WOLCOTTSVILLE.—Charles H. Schad, general store, lumber, etc., has assigned to E. C. Stebbins. The liabilities are reported at from $80,000 to $100,000, and assets about $50,000. He was postmaster of the village. He carried on a number of operations on a comparatively small capital, had to borrow largely and was generally slow in his payments. He had real estate which he valued at $40,000, mortgaged for about $20,000.

NORTH CAROLINA.

DURHAM.—C. A. W. Barnham, liquors and restaurant, has assigned.
DYMOND CITY.—D. Hardison & Son, general store, have assigned.
GOLDSBORO.—W. M. Moore, grocer, has assigned. Liabilities about $7,000. The assets will probably pay the preferences.
JONESBORO.—Caveness & Co., general store, have assigned.
LAURINSBURG.—A. R. Autrey, general store, has assigned.
WINDSOR.—Dunstan & Vick, general store, have assigned.
WINDSOR.—J. R. Moody, hotel and general store, has assigned.

OHIO.

ASHTABULA.—N. Thompson & Son, shoes, have assigned to A. W. Stiles.
BARNESVILLE.—J. W. Gibson, grocer, has assigned. Liabilities $1,500; assets about $800.
BOLIVAR.—John Hickman, grain, has assigned.
CARROLLTON.—H. S. Spencer, carriage maker, has assigned.
CINCINNATI.—Hyman & Armstrong, household goods, gave a chattel mortgage for $18,000 and assigned. They started in May last.
CINCINNATI.—Lena Klein, shoes, has assigned to E. M. Spangenberg.

CINCINNATI.—The Cincinnati Lard Refining Company has assigned to Alfred A. Clerke. It claimed a paid in capital of $50,000.

CLEVELAND.—J. W. Carson & Co., clothing and gents' furnishing goods, have assigned to William Walton. They had special capital of $15,000 to February 28.

COLUMBUS.—The schedules of Isaac C. Asten, books, show liabilities $18,000; assets about $3,500.

COLUMBUS.—A majority of The Wing Truck Manufacturing Company have assigned to J. W. Mooney. There has been considerable trouble between the parties interested, in consequence of which they divided into two factions.

DAYTON.—E. D. Dubois, wall paper, has assigned.

EAST TOLEDO.—Zancer Less, dry goods, has assigned to B. Less.

LIMA.—S. W. Watson, shoes, has assigned to B. C. Faurst.

LOWELL.—S. N. Merriam, general store, has assigned.

MIFFLINTOWN.—Execution has been issued against Mrs. Sarah Fink, millinery, for $520.

NEW CASTLE.—Charles Gariborino, fruits, has been closed by the sheriff, and he has been arrested on a warrant from Pittsburgh.

NEW CASTLE.—The liabilities of G. C. Hagan, shoes, are about $58,000; preferred claims $7,000; nominal assets $35,000; actual assets about $25,000.

NEW CASTLE.—David Wintermitz, groceries and liquors, offers to compromise.

OIL CITY.—Execution for $840 has been entered against A. J. Frenberg, notions, and she was sold out by her father. It is thought outside creditors will not get anything.

PHILADELPHIA.—Alburger Brothers, grocers, have been closed by the sheriff. Judgments amounting to $3,500, for borrowed money, were entered against them in favor of their mother, C. E. Alburger.

PHILADELPHIA.—Judgment for $359 was recently entered against Jacob Barth, baker, and execution issued.

PHILADELPHIA.—P. P. Gustine & Son, manufacturers of furniture, have failed, the result of indorsing for John Landenberger, his son-in-law, for about $30,000. Mr. Gustine also loaned the latter $56,000 in cash. It is thought the assets will not exceed $80,000. The firm is not known to have much indebtedness in their own business or operations.

PHILADELPHIA.—William Haginbotham, baker, was closed by the sheriff.

PHILADELPHIA.—Hodgkins & Co., manufacturers of hosiery, have been closed by the sheriff.

PHILADELPHIA.—Kelly & Ludwig, machinery, offer 50 cents in three, six, nine and twelve months. Liabilities $50,000; assets about $30,000.

PHILADELPHIA.—The liabilities of John Landenberger, commission hosiery, who has failed, are reported at about $130,000, on nearly all of which P. P. Gustine, his father-in-law, is indorser.

PHILADELPHIA.—John P. O'Donnell, grocer, was advertised to be sold out by the sheriff, on a judgment for $1,036.

PHILADELPHIA.—Henry Roth, shoes, is in the hands of the sheriff on judgments and executions for $2,377. Liabilities $4,200; nominal assets $3,000.

PHILADELPHIA.—Judgment for $5,250 was recently entered against James Reisky, Jr., furrier, and execution issued.

PHILADELPHIA.—The liabilities of James Smyth & Co., manufacturers of cotton and woolen goods, are reported at $520,000, and nominal assets $680,000. A proposition has been made to issue bonds to creditors in full for claims, to run five years, and secured by mortgage or deed of trust to a representative committee of creditors. It is thought the proposition will be accepted.

PHILADELPHIA.—Paul Von Amsburg & Co., manufacturers of yarns, have been sold out by the sheriff.

PHILADELPHIA.—James Wensley, shoe fitter and printer and publisher, was closed by the sheriff. Liabilities about $1,300; nominal assets larger. Judgments aggregating $653 were recently entered against him.

PHILADELPHIA.—Joseph A. White, fancy goods, has had execution for $500 issued against him. Liabilities about $2,000.

PHILADELPHIA (Frankford).—William H. Boulton, boots and shoes, was recently sold out by the sheriff. Preferred creditors did not realize more than about one third of their claims. Liabilities amount to $800; preferred claims about $500; assets about $250.

PITTSBURGH.—The liabilities of The St. Julien Brewing Company are about $44,000; nominal assets $38,000.

READING.—J. Stieft & Brother, manufacturers of wool hats, are reported to have failed and to offer 15 cents.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 20, 1883.

NOTES OF THE WEEK.

The deadlock in the stock market, which seemed to paralyze business last week, broke this week in a burst of activity. The break took the form of a sharp upward movement, affecting principally the low-priced stocks; and the combination of "reformed bears" carried all before them with a high hand until Thursday, when the movement was demoralized by an unexpected break in Union Pacific, due, it is said, to the too precipitate unloading of its holdings by a pool which has long been carrying a large block of this stock. The rise in the market had brought in a good sprinkling of orders from the country to the various commission houses, which arrived just in time for the break in prices. An attempt was made yesterday morning to repair damages and start the market up again, but the movement had scarcely got under way when Union Pacific exhibited further symptoms of breaking, and a sudden decline in Lake Shore completed the defeat. The market closed rather weak, but a stiff advance has been effected as the result of the week's work, and the combination may yet effect their purpose of carrying prices to a much higher level than they are now.

In the decision by the General Term of the Supreme Court on Wednesday, Judge Davis developed clearly the distinction between the ordinary liabilities of carriers at common law and the enlarged duties which changed conditions in more modern times have caused to be imposed upon railroads. Through the operation of many causes these corporations have taken on a distinctly public character. Upon one ground, of course, corporations have always been regarded as subject to the supervision of the state; they are its creatures. In regard to the special class of corporations in question, Judge Davis points out that their construction depended upon the exercise of the right of eminent domain, which belongs to the state in its corporate capacity alone, and cannot be conferred except upon a public use. This transcendent right the state was constitutionally powerless to grant for any other than a public use, and the legislature cannot by any sort of enactment divest of its public character any portion of the right of eminent domain which it may confer. In discussing the opinion delivered by Judge Haight in this case about five months ago we pointed out that in many parts of the country railroads are the only highways between distant points, and that the refusal of the railroads to convey from one of these points to the other amounts practically to a suspension of traffic. This feature of the case is noticed by Judge Davis, who says that, while good reasons may be assigned why the state will not interfere by mandamus to enforce the performance of his contract by a carrier who has not contracted with the state to assume the duty as a public trust, nor taken power to do it from the state by becoming the special donee and depositary of a trust, yet that the reason for such a rule altogether fails when a public highway is the exclusive property of a body corporate which alone has power to use it.

We observe that many New York journals, without distinction of party, have found occasion for severe and sweeping criticism in the conduct of Mayor Edson, since his assumption of office, especially as regards his appointments. This expression of opinion comes equally from those who urged and those who opposed the choice of a "citizens' candidate" at the elections in November last. It seems to us that these journals expect altogether too much from the action of individuals in an abused and long-discredited system. For this reason we have not shared in the confidence with which certain of the journals in question have hailed with each recurring election the movement for a citizens nomination through which it has been expected that a non-partisan administration could be secured. As we pointed out before the election, in order to secure an efficient administration of city business, the agitation must extend much further and deeper than is possible in a single campaign. It will be necessary in the first place, we repeat, to secure for the mayoralty of New York city, through appropriate legislation, such an extension of authority as will render the office and its occupant effective for good. Only when this is done can a thoroughly efficient and responsible conduct of city affairs be rendered a possibility.

As will be seen by reference to the letter of our Washington correspondent, a new complication has arisen in the matter of the sugar tariff. The treaty recommended by the Mexican Treaty Commissioners, General Grant and Minister Romero, proposes, if the reports are correct, to permit the importation of Mexican sugar to this country duty free. The representatives of the sugar interest in Louisiana and New York have not, as yet, succeeded in securing the abrogation of the Hawaiian treaty, although there is some prospect that they will be successful.

We give place elsewhere to a surprising article taken from the current issue of the *Bulletin*, the well-known organ of the American Iron & Steel Association, edited by Mr. James M. Swank, secretary. The Boston *Advertiser* and the *Commercial Bulletin* of the same city both take strong ground in favor of a general and marked reduction of the tariff, while asserting that protection is a means to an end, and that the end is free trade. Mr. Swank, on the contrary, insists—and in thus insisting doubtless speaks for his association—that protection is an end in itself, and that the doctrines given out by the New England journals named are rank heresy in Pennsylvania. We leave these leading authorities to settle their own disputes, simply observing that it was on the basis of the doctrine indicated by the Boston journals that the policy of protection was adopted by the country.

We have heretofore repeatedly pointed out the evil influence exerted upon business by the unsatisfactory condition in which legislation concerning the revenue remains, and have called attention to the need of attaining to a definite settlement of the tariff question in one way or another. The uncertainty in regard to the outcome of congressional action upon this very important question has operated seriously to the detriment of business in many lines, and complaints are constantly coming from different sections of the country attributing sluggish or halting movements of trade to the hurtful influence of "tariff uncertainties." And yet the tariff bills before Congress are making very little progress, indeed, and the prospect of the passage of either of them at this season is extremely doubtful. The care of the business interests of the country seems to sit very lightly, indeed, upon the present Congress.

On Thursday the report of the Bank of England showed an increase in bullion of £637,000. The weekly statement of the Bank of France shows an increase of 2,000,000 francs, gold, and a decrease of 1,125,000 francs, silver. The statement of the Imperial Bank of Germany shows an increase in specie of 19,660,000 marks. The bank has reduced its rate of discount from 5 per cent. to 4. This showing of the three leading European banks should tell in favor of increasing ease in foreign loan markets. During the past twelve weeks the tendency of the foreign trade of the United States has been distinctly in the direction of a movement of gold to the United States. This so far as relates to the import and export of commodities. On the comparison of commodities alone gold would already have moved hither, but as the supply of the precious metal at London is not large, the disposition has been to let American securities or goods go at prices deemed attractive on this side the Atlantic. The truth is that undue attention is given to the mere movement of gold. Thus, at the present juncture, the swelling tide of exports is a hopeful sign for the immediate future of American trade, as showing that an adequate market exists for our surplus of agricultural and mineral productions. The movement of gold hither just now, however, would not be in itself a good thing, for the United States do not appear to need gold particularly. It were better that desirable goods should come at low prices, provided our tariff would let them in, than to get gold at a time when it is not specially needed for the principal use to which gold is now put, namely, for use as bank reserves. This is no argument in favor of the importation of foreign goods. It is better to produce everything at home, so far as possible. The point to be kept in mind is that gold is itself a commodity, and comes to or goes from a country as it is or is not needed. If gold does not come hither now, when the balance on ordinary merchandise transactions is in our favor, it is reasonable to conclude that we already have a sufficient supply of the metal in our warehouses—bank vaults.

The propriety of doing away with telegraph poles in populous cities is not likely to remain a local question very long. The Chicago *Times*, one of the leading organs of public opinion in the west, recently contained some very forcible remarks upon the subject, which were suggested by the circumstance that at the recent fire in Milwaukee the network of wires about the Newhall House prevented an effective use of the appliances designed to facilitate the escape of the inmates from the burning building. The *Times* calls the attention of the authorities of Chicago to the fact that some time since the Common Council of the city passed an ordinance requiring that by a certain day the telegraph and telephone wires of the city be carried underground, and demands that the authorities insist upon full compliance with this regulation, which it declares to have been "dictated by good sense, good taste, and proper regard for the common safety."

PROSPECTS OF TARIFF LEGISLATION.

The Ways and Means Committee has completed its Tariff bill; the Senate has had under discussion for nearly two weeks the bill of its Finance Committee. It is possible now to make an intelligent forecast of the probable result. There probably has never been a revenue measure presented to Congress as to the nature and effect of which there are so many contrary opinions as the Ways and Means Tariff bill. The bill meets what evidently are the standard requirements as to size, for, like the Senate bill, it covers about 140 pages, and contains about 35,000 words. Judge Kelley is understood to maintain that it is a bill which will effect very marked reductions, and that it will be found, when it shall go into operation, that there will be reductions in every schedule except, possibly, that upon jute and articles of that class. Why there should be an increase as to this particular schedule does not appear. But none of the supporters of the bill are willing to state the amount of revenue which will be collected under it, or to indicate the difference between its operation and that of the existing system. That matter has been turned over to Treasury experts to ascertain, and, from information which they give, it does not seem probable that they will be able to arrive at any satisfactory result. Prior to the changes which were made this week by the committee in the iron and steel schedule, the Ways and Means bill actually increased the revenue $3,000,000.

The classifications are said to be so much changed and to be so refined that it will be impossible to determine, even approximately, the amount of revenue which will be derived from the bill. On the last day of the consideration of the measure there were radical changes made both in the sugar and the iron schedules. It is from these changes that the largest reductions of revenue are expected. Still, Democratic members of the committee, who have watched the progress of the bill perhaps even more closely than the Republicans, and who will not support it, maintain that the bill, even with the modifications made on the last day, will still increase the revenue over the receipts of last year on the basis of the same importations. This position, however, can probably not be maintained. The bill, undoubtedly, would reduce the revenues.

It may be considered at the outset as a fact already established that the bill reported by the Ways and Means Committee has not the slightest chance of passing the House, and that, if by any possibility it should pass, it would be buried in the Senate. The measure has not the united support of either party. It is a curious illustration of the peculiar relations of parties to the tariff that it will not meet with the united opposition of the Democratic party, for it is to some extent due to the votes cast by protectionist Democrats in the committee that the bill was reported. With the exception of Mr. Randall, of Pennsylvania, and Mr. Speer, of Georgia, the Democratic members of the Ways and Means Committee will at every step contest the passage of the Kelley bill.

There is not any considerable item in the bill as to which an amendment reducing the duties will not be proposed, and the measure must receive its consideration in the committee of the whole, where the previous question does not prevail. Moreover, there are signs of rebellion among Republican members of the committee. There is growing discontent in certain sections of the west against high tariff, and the members from those sections will hardly choose to appear before their constituents as giving hearty support to a bill which proposes to increase tariff taxation. In the House the opinion prevails that the Ways and Means Committee has carried things with too high a hand, has declined to give audiences when audiences should have been given, and has generally been unwilling to listen to congressional advice. No tariff measure ever emanated from the Ways and Means Committee which received at the outset such lukewarm support or encountered such determined opposition. Even the most sanguine managers of the measure have very little confidence that the Ways and Means bill will pass the House.

Attention, then, must be directed to the Senate. There the monster Finance Committee's bill is acted upon line by line. The bill comprises about 140 pages, of which less than twenty, in two weeks' discussion, have been passed over. The Republicans have left the bill, by common consent, to the charge of the Finance Committee, and, with three or four exceptions, the members of that committee seem indifferent to it, and those three or four members are not so well informed as to the reasons for the changes proposed as they should be. Their inability to answer questions has weakened confidence in the committee. The representatives of the protected industries have already had numerous wrangles as to the changes proposed, while the Democrats are opposing the bill at every inch. They have voted against nearly every proposed change thus far, and, if they are consistent, they must vote against the bill. There are indications that some of the western Republican senators, when the more important schedules of the bill shall have been reached, will oppose their own Finance Committee. The result must necessarily be confusion. The best opinion is that the Senate bill, with some modifications, will ultimately pass that body. Then will come the crisis of tariff legislation. The Tariff bill goes to the House as an amendment to the Internal Revenue bill passed by the House last year. The Constitution, while providing that revenue measures shall originate in the House of Representatives, also provides that the Senate may amend a revenue measure. The tariff managers in the Senate think that they have avoided this constitutional inhibition by the form in which they propose to send the tariff measure to the House. Nominally it is an amendment, but, of course, as a matter of fact, it is a bill. No one expects that the House will unanimously consent to the Senate's construction of the Constitution. There will be a good many, including free-traders and Democrats, as well as protectionists, and those who desire no change in the tariff laws, who, on principle, will insist that the House must vindicate its right to originate revenue measures, and who will for that reason reject any bill which comes to the House in a form so thinly disguised as that in which the Senate's Tariff bill will go from the Senate. All this will take time, and there is no time to be spared. The Forty-seventh Congress will expire by limitation six weeks from Monday next. The Senate has transacted but comparatively little of the ordinary essential business of the session. Several appropriation bills are waiting in its committee for action. Every day's delay imperils the passage of any tariff measure.

CITY BUSINESS AND CASH PAYMENTS.

A doleful financial tale comes to us from Galveston, Texas. The *News* of that city tells how a committee of its council recommends an increase in its tax levy for the coming year, and how, in apology therefor, the following reasoning is offered:

> The sad experience of this year in having overestimated the collection of new taxes to the amount of about $50,000, and a consequent deficit of $29,000 in the general fund, caused the committee to estimate only 60 per cent. collections of new taxes in the first year, allowing 40 per cent. for delinquents, who will only pay after the expiration of the tax year. This has been the average for the last seven years. At this rate it takes 75 cents tax levy for the general fund, making a total of $1.50 per $100. Your committee see no way to raise the necessary revenue from other sources. If the present tax rate of $1.30 were to be retained the general fund could only receive $139,000, all told, and with this sum it would leave not a single dollar for any improvements.

The condition of Galveston fairly illustrates that of many other cities in the United States. Without being particularly informed, we venture the assertion that Galveston's present difficulties are the outcome of an abuse of the credit system. In all likelihood the primary resort for funds of the Galveston officials during recent years has been, at intervals, the loan market. Following upon this came the non-payment of taxes, confusion of accounts, etc. A tax is a debt due from one member of a community to all the other members of the same community, and prompt payment, as the *News* says, should be enforced. The road leading to prompt payment is the pay-as-you-go system, for then a city in default of payment must stop going.

The report of the Controller of Philadelphia, just at hand, for the year 1882 abounds in points for Galveston's financiers. Of Philadelphia's last year's tax levy all but 7 per cent. was collected on December 31. Of the tax levy of 1881 there remained uncollected at the end of the year 8 per cent. In 1878, when the abuse of the credit system in Philadelphia's finances reached its climax, there remained uncollected at the end of the year fully 22 per cent. The cash system intervened, and since 1879 it has been coming to be the habit of taxpayers thereabouts to pay within the year. In time the collections for the year will be practically the face of the levy, as before 1810, when the credit system had not taken root. We commend the recent developments in Philadelphia to the Galveston *News* and the taxpayers of that city.

SUPPLY AND DEMAND IN THE CHEESE TRADE.

About a month ago we mentioned some of the causes which had affected the cheese market during the past year and had given such evenness and stability to prices. But there was one cause, not then spoken of, which, now that the statistics of the year are complete, may be regarded as the mainstay of the market. That was the decreased supply of stock at the cities from which it is chiefly exported to foreign countries. The receipts at New York for the year were only 2,273,866 boxes, to compare with 2,913,186 boxes in 1881, a falling off of 639,320 boxes, or more than 20 per cent. At the same time Boston received 302,470 boxes, against 297,300 the year before, a slight increase of 5,170 boxes. The result of the two combined is very close to a decrease of 20 per cent. from the previous year. In fact, there have not been such moderate receipts at New York since the year 1876, when they stood at 2,153,797 boxes.

It is interesting to note the relation of prices to receipts during the last twelve years, which comprise the heavy trade in cheese. In order to do this we present two tables, one of which gives the receipts and exports for those years, while the other gives the prices of cheese and of gold for the same period:

	Receipts.	*Exports.*
1871	1,454,721	1,275,634
1872	1,666,070	1,214,446
1873	1,997,776	1,569,570
1874	2,083,983	1,638,024
1875	2,262,115	1,847,123
1876	2,153,707	1,780,035
1877	2,407,327	2,040,525
1878	3,174,044	2,506,471
1879	2,563,710	2,318,774
1880	2,699,724	2,172,404
1881	2,913,186	2,362,020
1882	2,273,866	1,748,457

PRICES.

	Feb. 1.	*Mar. 1.*	*May 1.*	*Aug. 1.*	*Nov. 1.*	*Gold.*
1871	$0.16	. . .	$0.14	$0.11	$0.14	$1.08½ to $1.13¾
1872	.16¼	$0.19½	.16	.12½	.15	1.09 to 1.15½
1873	.16½	.17	.15½	.13¾	.14½	1.09 to 1.19
1874	.16½	.17¼	.17½	.13¼	.16¾	1.09½ to 1.13⅝
1875	.17	.....	.16	.12	.12¾	1.12½ to 1.17¼
1876	.14	.....	.13½	.09½	.13¾	1.07⅞ to 1.14½
1877	.15½	.16	.15½	.10¾	.13½	1.02¾ to 1.07½
1878	.13¼	.14	.12	.07¾	.09¾	1.00⅜ to 1.02¾
1879	.09½	.....	.08	.08¾	.13¾	Par.
1880	.15	.....	.14	.12	.13	.....
1881	.13¼	.....	.12½	.10¾	.13	.....
1882	.13¼	.....	.12	.11	.12¾	.....

We have added a few quotations in the month of March to show the highest point touched during certain years.

The first noticeable fact connected with this exhibit is that the receipts at this port, and probably the make of the whole country, reached their high-water mark in 1878. As a result of that fact, cheese dropped to a lower price than it had touched in many years; and the influence was carried on into the fall of the next season, because receipts were heavy through the winter of 1879, and a large amount of stock was carried into the spring, which served to depress the early markets and made the whole season weak until it was demonstrated that the production was very much less than it had been the previous year. The exports of 1878 corresponded well in amount with the receipts, being the heaviest on record; but it is not even supposable that such would have been the case if prices had remained at their former height. It was shown, besides, that England would take and use a large amount of our cheese, if she could get it at a low figure. This was farther demonstrated the next season, when, although the receipts fell off 607,334 boxes, the shipments were only 187,697 boxes less than the year before. Prices continued at a low ebb until the middle of September, when they rapidly rose to their former mark; but the bulk of the season's cheese had already been marketed and shipped.

In looking at these tables it will be seen that the highest prices are found during the first half of the last decade of years. This is in part attributable to the premium on gold, which may be said, in a general way, to have added about one-eighth to the price of our commodities during those years. With this fact in view, it is seen that cheese at 16c. was equivalent to 14c. when gold was at par, and at 12c. it was equal to 10½c. with gold at par. So that when we come to reduce the apparently high prices of those days to a level with our present currency, they do not seem so exorbitant after all. Particularly is this the case when we look at the amount of the receipts and exports in comparison with those of later years.

In order to gain a more accurate idea of the relation of prices to foreign demand let us compare the years 1879 and 1881. In the latter year the receipts were 346,476

boxes more than in 1879, while the exports were only 33,246 greater, or less than 10 per cent. of the excess of receipts. If now we examine the prices for those years, it is found that for two-thirds of the season they ranged from 25 to 50 per cent. higher in 1881 than in 1879. This is one of the most forcible examples of the effect of prices on English consumption. For, after all that may be said concerning the increase of the British make, it is quite certain that if American cheese can be sold 25 or 50 per cent. lower than the English farmer will take for his, there will be immense quantities of it consumed in England in preference to their own make.

We point out these facts to show that when a season of excessive cheese production shall occur, so that our home consumption is unable to steady the market, a material reduction in the price will be sure to create a large demand on the other side of the ocean, unless all precedents should fail. There are no signs of over-production at present, but there is no telling what another season may bring around.

THE READING RAILROAD'S AFFAIRS.

The announcement that (with the sanction of the receivers themselves) an application has been made to the United States Circuit Court for a dissolution of the receivership of the Reading Railroad has once more directed public attention to the affairs of that corporation. Ever since the return of President Gowen from his prolonged visit to Europe the tongue of rumor has been busy concerning him and his trust. It has been said that his efforts to enlist the support of foreign capitalists were unsuccessful; that his withdrawal from all further relations with the road was imminent; that Mr. Vanderbilt or one of his agents would assume the helm, and that finally, from a financial point of view, the road was going from bad to worse. All these statements, however, have been set at rest, partly by the declarations of the parties in interest and partly by the recent annual report, which, taken together, seem to indicate, to employ the mildest construction, that the corporation is fairly on its way to a more substantial and prosperous position than it has enjoyed for years. This assumption is largely borne out by the satisfactory nature of the company's business for the past year. At the end of 1881, in spite of the exercise of the most rigid economy, the combined profits of the railroad company and its tender, the Coal & Iron Company, after the payment of rentals of leased roads and canals, and interest, were but $183,256.14. For the year ending last month, notwithstanding the fact that the percentage of working expenses to gross earnings was increased from 56 3-10 in 1881 to 56 8-10, the net profits were $882,941.59, or an increase of $699,685.45. A portion of this gain must be attributed to the fact that through the efforts of the receivers the interest charges during the year were reduced by $141,101.89, but even this deduction leaves a clear improvement of considerably over half a million dollars as the results of the receivership for a single year. It is this showing which has given rise to the very widely expressed opinion that the interests of the stockholders would be probably best subserved by an indefinite continuance of the present management.

The plan of President Gowen for relieving the corporation of the burden of its multitude of existing obligations, and for placing it on a sound financial basis, is simple. It is proposed to retire part of this existing indebtedness and to create in its place a convertible adjustment scrip of $4,000,000, at 6 per cent., and payable in five years, the company having the option to call in such amounts as may be deemed desirable at an earlier period. Additional obligations are to be retired by the proceeds of $10,000,000 of the second series mortgage bonds of the issue of August 26th last, while the present floating debt of $5,843,645.47 will shortly be cleared off by the recent sale at par of $5,000,000 of the unissued general mortgage sevens. As soon as these plans, which have been approved both by the managers and the stockholders, can be carried into effect, it is believed that the surplus earnings over the fixed charges, to saying nothing of the prospective increase in earnings, will be sufficient to place the financial standing of the company once more on a sound basis.

The contracts recently executed by the company, and upon which great hopes are based, have already been widely published. By one of them, with the New York Central Railroad, its anthracite production will have an outlet into the great north and northwest section of the country. By another, with the same road, the Reading will become part of a trunk line to Chicago and the lakes, while by minor ones it acquires additional outlets for its productions. Taken altogether, the present year is likely to be the most important one in its history, and the results will be awaited with interest by all who financially or otherwise are interested in its prosperity.

THE PRODUCTION AND USE OF COAL IN THE UNITED STATES.

The annual production of coal in the United States is a subject which is constantly growing in importance. Aside from the output by the companies engaged in the Pennsylvania, Ohio, Virginia, Maryland and a few other and minor state fields, the statistics as to production, thus far made public, are either incomplete or largely estimated. The only effort made to gain exact data on this point was that by the Census Bureau for the year ending May 31, 1880. The carefully compiled reports of production from the anthracite regions, tabulated and published weekly, leave little to be desired respecting that branch of the industry. Fairly accurate returns are also available from the Virginia mines and from the Cumberland and Clearfield bituminous tracts. The Illinois State Bureau of Industry recently did good work in obtaining full reports from the coal fields of that state; and in the various departmental reports of other states, notably those of Alabama, Tennessee, Kentucky, Indiana and Ohio, the subject of production of coal has received some attention from the local collectors of statistics, geologists and others. The noteworthy efforts now making in many states toward perfecting agricultural, industrial and geological departments of investigation will ultimately result in making good the deficiency in our knowledge of the exact annual output of bituminous coal. For purposes of comparison, however, the figures used have been taken from sources already referrred to, together with the estimates of those widely engaged in the coal trade. The production of coal, of all varieties, in 1881, was as follows, in countries where the total output amounted to 1,000,000 tons and upward:

	Tons.		*Tons.*
Great Britain	154,184,300	Austro-Hungary	14,936,000
United States	76,184,000	Russia	3,000,000
Germany	48,698,000	India and Japan	2,600,000
France	19,909,000	Australasia	2,170,000
Belgium	16,900,700	Canada	1,416,000

From this it is seen that the United States ranked second as a coal-producing country, having about one-half the yearly output that the United Kingdom has, although possessing the most extensive deposits in the world. The growth of the coal-mining industry in the United States is best shown by the following table, in which the figures for 1882, with the exception of those representing the output of Pennsylvania anthracite, are estimated, as noted:

PRODUCTION OF COAL IN THE UNITED STATES.

	Gross tons.			
	1882.	1881.	1880.	1870.
Anthracite:				
Pennsylvania	29,194,000	28,560,016	23,437,242	15,643,437
Rhode Island	*45,000	5,000	5,000	14,000
Virginia		52,700	40,000	.....
Colorado	10,000	.....	.....	.....
Totals	29,259,000	28,557,716	23,482,242	15,662,437
Bituminous:				
Pennsylvania	*57,000,000	20,000,000	19,000,000	7,800,356
21 states and ter.		27,626,918	22,766,160	9,848,112
Totals	*57,000,000	47,626,918	41,766,162	17,648,468
Total production.	86,259,000	76,184,634	65,248,402	33,310,905

*Estimated.

The totals point to the following annual increased output: From 1880 to 1881, 10,936,232 tons, and from 1881 to 1882, 10,074,366 tons, or, from 1870 to 1882, 52,948,095 tons, an average of about 4,000,000 tons per annum for thirteen years last past. This rate of growth of the coal-mining industry is slightly in excess of that observed in the United Kingdom during the twelve years 1870 to 1881 inclusive. Within that time the increased production of British coal was, in round numbers, nearly 44,000,000 tons, or from 110,431,000 to 154,200,000 tons. The average increase in production in Great Britain was, during twelve of the thirteen years noted in the case of the United States, about 3,366,000 tons, against the 4,000,000 tons mentioned above. But the rate of production in Great Britain has increased of late years. From 1877 to 1881 inclusive, five years, it was about 4,000,000 tons per annum, which, if maintained during 1882, would give a total output for that year of about 158,184,000 tons of coal, against the total of 86,259,000 tons in the United States in a like period. The rapid annual increase in the production of coal in this country is, of course, due to extended effort at mining the bituminous variety. In 1881 the production of anthracite coal was about 5,075,000 tons in excess of that of 1880, and in 1882 but about 700,000 tons over that of 1881. In 1870 the aggregate output of anthracite, 15,662,437 tons, was about 13,596,500 tons less than during last year, giving an average annual increase of anthracite production during the thirteen years of but a trifle over 1,000,000 tons. The quantity of bituminous coal brought to the surface in 1881, over that mined in 1880, was over 5,860,000 tons, and in 1882 over that of 1881, was (estimated) about 9,373,000 tons. There is little reason to doubt, if full reports from all western and southern and the Pacific coast and territory bituminous mines were at hand, that the excess production in 1882 over 1881 would be found to exceed 10,000,000 tons. Some eastern bituminous mining companies have a slightly decreased tonnage during 1882, owing to stoppage from strikes and other causes.

The estimated bituminous production last year of 57,000,000 tons is compared with 17,648,468 tons in 1870, an increase of 39,351,532 tons in thirteen years, or an average annual increased output of over 3,000,000 tons, or about three times as rapidly as the average annual production of anthracite during recent years. The increase in the total production of anthracite coal in thirteen years has been slightly in excess of 53 per cent., or a trifle over 4 per cent. per annum. The bituminous output, as may readily be perceived, has advanced much more rapidly, the rate being nearly 333 per cent. in thirteen years, or at an average annual rate of about 25½ per cent. The total production of Pennsylvania anthracite coal from 1862 (when it aggregated 7,869,407 tons) to 1880, inclusive (nineteen years), was nearly 310,000,000 tons, or an average annual production of 16,310,000 tons. The net increase in 1880 over 1862 was about 15,567,000 tons, about 100 per cent., or a little over 5 per cent. per annum.

Considerable discussion has been excited of late over the probable exhaustion of our anthracite fields. The United States has, doubtless, an unlimited supply of bituminous coals. Indeed, except in western Pennsylvania, in Illinois, Ohio and Maryland, our bituminous coal fields may be regarded as practically undeveloped. The actual extent and capacity has not even to this day been fully determined. Not so, however, with the anthracite regions. Eight Pennsylvania counties are mentioned in a late consus bulletin as producing a majority of the anthracite coal of the country. Virginia and Rhode Island anthracite fields at present cut but an inconsiderable figure, and can hardly affect a question of future supply. The former state has of late been exploited in this direction, and several industries have been constructed there to take advantage of the Virginia deposits of anthracite. No evidence has been received, however, that beyond Pennsylvania there exists any anthracite deposits of special import outside of the recently discovered anthracite regions in Colorado. The anthracite coal deposits of Colorado cover an extensive territory, but much of the coal is inaccessible and some is of an inferior quality. The best is found at the head of Anthracite creek, near Irwin, and on Slate river, about three miles from Crested Butte. An equally good quality is also found on Rock creek, but the immense seams found down Anthracite creek toward the North Fork of the Gunnison river hardly come up to the Pennsylvania standard of excellence. The Colorado coal output in 1882 was nearly 2,000,000 tons, valued at about $4,000,000 at the mines. The anthracite output was nearly 2,000 tons, valued at about $10,000. The coke production has reached the sum of nearly 100,000 tons, valued at $4.50, a total of at least $450,000. Value of entire coal output, $4,460,000. When it is considered that anthracite coal has been the means of enabling our iron and steel industries to reach their present stage of advancement, the importance of the question of the exhaustion of the deposits of that variety of coal is at once noted. The mining experts have shown that under existing methods of extracting anthracite coal in this country but 27 per cent. of the total product is marketed. This appears somewhat startling to the average onlooker, and appears like a small percentage even when the known heavy waste and coal left to support the walls of the mines are reckoned. These considerations are induced by the discussion appearing in the daily press of late that our supplies of anthracite coal will not last one hundred years at the existing rate of mining and consumption. On this most interesting point Mr. Raphael Pumpelly has something to say in Census Bulletin 223, concerning the production of anthracite coal in Pennsylvania. He finds that 56.6 per cent. of the Pennsylvania anthracite lands only have been and are being worked by the companies controlling or owning them, the remainder thus far having been held in reserve. The estimate is made, based on calculations of those considered experts on the subject, that after 1880 the total production of anthracite coal in the Pennsylvania regions will have to equal 4,009,640,000 net tons ere the lands will be exhausted. This, at the rate of production in the census year (something over 27,000,000 net tons), indicates that said deposits of coal will last 146 years. But, as explained, only a little over one-half of such deposits are being mined, which means the exhaustion of the coal lands now being worked (according to Mr. Pumpelly) in about 83 years. The output of anthracite since the calendar year 1879 (which included three-fourths of the "census year 1880") has increased from over 23,400,000 to over 29,600,000 (gross) tons, or nearly 25 per cent., thus materially increasing the rate at which the coal lands are being denuded. Speculations of this character, however, while there are billions of bituminous coal to be obtained for the effort to go and get it, do not seem of the importance generally accorded them. It is conceded that at the lowest estimate our total supplies of anthracite will last one hundred years yet. The burden of complaint concerning the necessity for anthracite rests upon its value for industrial purposes. There is no doubt that to-day the harder variety of coal is a necessity to the successful operation of many industries. It is likewise true that, during the past five years, the use of bituminous coal in many lines of industry has caused a marked change of the coal markets of the east, and has stimulated many to exploit the regions containing the softer variety. It is not to the interest of the aggregated anthracite companies—and they are few and quite harmonious—to admit that there is much in this fact. But the increasing use of bituminous coal for industrial purposes we regard as one of the most significant industrial changes in progress. The inventive skill that has been applied to the solution of the problem is of the highest order. Locomotives for consuming soft coal are no longer any novelty west of the Alleghanies. The success of smoke-consuming furnaces and stacks will add hundreds of thousands of dollars to the bituminous coal companies' pockets annually, and the domestic consumption of bituminous coal, comparatively unknown in the east, is a matter of no note whatever at western cities, so common has it become. There is no existing reason to believe that the resources of the laboratory and practical industrial skill are too weak to cope with the problem of the substitution of bituminous for anthracite coal in many, if not all, of the special purposes in which it is now believed anthracite coal is a necessity. The welding of steel railway frogs was successfully accomplished in Kansas several years ago with bituminous coal.

The outlook during the coming year is for an increased output of both anthracite and bituminous coals. Mr. Vanderbilt's entry into the Clearfield (bituminous) region with a company capitalized at $5,000,000 means that more work will be done. He intends building a road to the mines, which will give him an extra coal tonnage over his various through lines and offset the losses of traffic he says he sustained by the Pennsylvania's entry into New

England and the Lackawanna's completion of its line to Buffalo. An Illinois' state report on the bituminous output showed that that state had previously been credited with far too small a production. The total was given at something like 9,000,000 tons, against a prior report of about 6,000,000 tons for 1881. This ranks Illinois ahead of Ohio and Maryland, the second state in the Union in producing that variety. In Alabama special efforts are making to increase the coal production of that state. Direct transportation to New Orleans has been opened, and the Pittsburgh coals have suffered somewhat as a result, although to no such extent as they ultimately will in that market. Tennessee is also becoming specially interested in the wealth of coal underlying that state, and, with Missouri, is adding annually to the output of the same in connection with a rapid development of manufacturing industries. On the Pacific coast, Washington territory, especially in the vicinity of Puget's Sound, possesses deposits of excellent coal. Oregon is also liberally supplied, and California least of the three. The coal deposits of Colorado have revealed an unexpected supply of true anthracite coal in the Gunnison district, which is largely responsible for the prosperity of the coal and iron industry in that state. The demands for coal by western dealers during 1882 were such as to warrant shippers in the east making arrangements to send larger supplies of anthracite in that direction during the coming year than ever before during one season. This is a strong indication of an increased production during 1883. The foregoing leaves one no special reason to sympathize with those who borrow trouble in anticipation of the exhaustion of anthracite one hundred years hence, and good cause to believe that the bituminous output will increase annually much more rapidly than heretofore, in response not only to the customary demand but to new and growing ones for purposes to which it has not ordinarily been applied.

EXPORTS OF BREADSTUFFS IN 1882.

The report of the Bureau of Statistics concerning the exports of domestic breadstuffs from the United States during December, and for twelve months ending with that month, furnishes some interesting comparisons with like shipments in 1881. In December, 1882, the exports of wheat were largest, of course, from New York city. But it may be of interest to note also that San Francisco ranked a good second with 2,319,882 bushels of wheat, against 2,350,476 bushels from New York. New York, San Francisco and Baltimore together monopolized 75 per cent. of the wheat export trade during the month named, the city last mentioned sending abroad 1,501,145 bushels. The total wheat exports for December were but 8,218,417 bushels. New Orleans ranked fourth, with 921,700 bushels of wheat; Willamette fifth, with 490,015 bushels; Philadelphia sixth, with 446,138 bushels, and Boston seventh, with but 174,948 bushels. But two other cities exported any wheat in December, Huron, Mich., 11,498, and Detroit 2,615 bushels. The total number of bushels of breadstuffs exported in December, with values thereof (wheat flour reduced to equivalent bushels of wheat and Indian cornmeal to bushels of corn), will be found as follows:

EXPORTS DURING DECEMBER.

	1882.		1881.	
	Bushels.	*Value.*	*Bushels.*	*Value.*
Wheat	8,218,417	$8,799,176	8,389,340	$9,630,863
Wheat flour	4,643,437	9,376,103	1,819,597	2,457,086
Indian corn	2,331,718	1,699,095	2,219,937	1,587,128
Indian cornmeal	99,168	92,495	110,692	91,984
Rye	155,789	111,290	16,147	15,661
Barley	11,529	8,217	15,566	11,737
Oats	15,964	8,605	20,691	11,341
Totals	15,476,022	$17,086,041	12,591,970	$13,806,886

The average prices of the various exported commodities named, calculated on the basis of the valuation given, was, in December, 1881, and again in 1882, as follows, together with increase or decrease in the closing month of last year:

AVERAGE PRICES DURING DECEMBER.

	1882.	1881.	*Inc.,† or Dec.**
Wheat	$1.077	$1.147	*.07
Wheat flour	1.373	1.350	†.023
Indian corn	.725	.715	†.01
Indian cornmeal	.922	.831	*.091
Rye	.714	.909	*.255
Barley	.713	.755	*.042
Oats	.541	.548	*.007

From the above it will be noted that wheat in the form of flour brought 2.3c. per bushel more in December last than in the like month of 1881, and that Indian corn was 1c. higher in December than one year previously. The average December prices of the other breadstuffs appear to have been lower in December, 1882, than in 1881, ranging from 7c. per bushel lower on wheat to .7c. less per bushel on oats. The exports of breadstuffs and values thereof from July 1 to December 31, in the two years under discussion, together with values of the same, were as follows:

EXPORTS JULY 1 TO DECEMBER 31.

	1882		1881.	
	Bushels.	*Value.*	*Bushels.*	*Value.*
Wheat	75,700,076	$84,825,198	59,959,004	$72,037,473
Wheat flour	20,407,128	27,612,123	12,799,018	17,710,928
Indian corn	5,209,765	3,980,848	32,968,996	21,160,117
Indian cornmeal	507,088	503,737	795,872	583,471
Rye	799,567	600,206	352,764	364,720
Barley	250,545	182,387	152,292	108,723
Oats	164,026	91,994	394,816	178,483
Totals	103,045,035	$117,826,493	107,332,842	$112,143,915

For the year just concluded the totals, as compared with those of 1881, both as to quantities and values (making reduction, as explained above, in cases of wheat flour and Indian cornmeal), are those appended:

EXPORTS DURING THE CALENDAR YEAR.

	1882.		1881.	
	Bushels.	*Value.*	*Bushels.*	*Value.*
Wheat	108,563,804	$123,241,061	118,203,900	$137,949,241
Wheat flour	33,467,703	45,327,900	30,222,063	39,644,386
Indian corn	15,389,658	11,034,747	72,483,401	43,853,282
Indian cornmeal	954,176	912,369	1,016,540	1,243,236
Rye	1,420,640	1,351,512	986,007	1,045,978
Barley	305,563	221,839	223,004	146,347
Oats	281,990	163,336	519,885	242,302
Totals	160,323,234	$182,682,734	224,253,890	$224,124,832

The falling off in total quantity shipped is thus seen to be 63,930,656 bushels of grain, valued at $41,442,098. The decrease in the quantity of wheat exported was 9,640,186 bushels, valued at $14,708,180, and of wheat, in the form of flour, the increased exports were 3,185,640 bushels, valued at $5,683,514. There were 57,093,743 less bushels of Indian corn shipped, valued at $32,218,535, and 662,364 less bushels of Indian corn in the form of meal, valued at $330,927. There was more rye sent abroad in 1882 than in 1881, the excess being 435,633 bushels, valued at $135,564. The increased export of barley amounted to 82,559 bushels, valued at $75,492, and the falling off in shipments of oats was 238,195 bushels, valued at $79,026. The noticeable feature of this exhibit, aside from the general decrease of the grand total for 1882, is the heavy shipments of wheat in the form of flour which have taken place. Thus, while wheat itself went abroad 1/13 less than in 1881, wheat, as flour, was exported in 1882 to a greater extent than in 1881 by 10 per cent. The significance of this cannot be avoided, and it is altogether doubtful if foreigners will see any of the hard, white wheat of the northwest on foreign shores again except in the form of flour. Certainly none from Minnesota and Dakota, which will be required by the insatiable Minneapolis and other northwestern millers.

The changes in the average prices of the breadstuffs named for each of the years mentioned, together with increases and decreases, were as follows:

AVERAGE PRICES FOR THE YEAR.

	1882.	1881.	*Inc.† or Dec.**
Wheat	$1.135	$1.167	*.032
Wheat flour	1.356	1.311	†.045
Indian corn	.755	.605	†.150
Indian cornmeal	.956	.769	†.187
Rye	.831	1.060	*.229
Barley	.724	.654	†.070
Oats	.580	.466	†.114

The export price of Indian cornmeal appears to have averaged 18.7 cents higher last year than in 1881, that of oats 11.4 cents, that of barley 7 cents, indian corn 15 cents, and wheat flour 4½ cents. The decrease was on rye, 22.9 cents, and on wheat, an average for the year of 3.2 cents. The new year will unquestionably show a different balance as compared with 1882.

ENGLISH TRADE AND FINANCE IN 1882.

The *Economist's* supplement, *The Investor's Monthly Manual*, in a review of the financial history of the year 1882, considering the question whether the year was a favorable or an unfavorable one to investors, expresses the opinion that, if the depreciation in commercial and mineral companies may be allowed to turn the scale, the results of the year may be considered as slightly against the aggregate of English investments, although it thinks that there has seldom been a year in which, looking merely at the net movements of the entire year, really striking movements in prices have been so exceptional. It remarks that in January and February the fluctuations in prices were exceptionally violent, but recalls the fact that the good sense of Lombard street succeeded in cutting the stock markets adrift from the giant speculations of Paris and Lyons. Although French bills were refused, however, European government stocks were offered at tempting prices, and were readily absorbed. The bankers' clearing on the first settling day after the crisis in Paris reached an amount exceeding all previous records. The fall in prices was severe for the time. A revival, however, followed shortly after, which was checked suddenly before the end of February. An unsettled feeling was making itself apparent in the political world. An Egyptian crisis had just resulted in the triumph of the military party, and General Skobeleff's speech to the Servian students directed attention to Russia. With the advance of spring money became cheaper, the prices of British securities rose, and English investors began to see that they were in reality gainers by the French crisis. A steadily improving feeling manifested itself in March, April and May. In the latter month the London market was eager for an extensive speculation in electricity, and those interested were enabled to manipulate the market. During this time, however, gas property was not much affected, and it is noted that, while most of the electric light concerns declined to a serious discount, gas stocks advanced very distinctly during the past year. At the end of May the securities in which British investors were most generally interested had recovered what ground they had lost in the beginning of the year, and an upward tendency made itself felt in South American and Indian railways and in colonial land undertakings. A depression began with the movements in Egypt in June. In the latter part of that month there was a panic in Egyptian stocks which continued until after the middle of July, with the exception of a short time when the vigorous action of the English fleet encouraged a burst of confidence. With the burning of Alexandria prices went down still lower; but the announcement of the Egyptian expedition restored a feeling of buoyancy. Matters had so far improved that, about the middle of August, the prices of Egyptian stocks had risen 10 per cent. The market continued to be well supported thereafter, but the tendency to further improvements was checked by the rise of money in England, by the fears of gold withdrawals for America, and by the depression in trade. As the year drew to a close business was restricted and prices were practically at a standstill. It is remarked that, after the alternations of depression and buoyancy by which the year was marked, prices at the close were curiously near where they were at the beginning. Among the stocks which suffered a decline are mentioned the English passenger lines and continental railways. Certain American railroad stocks, it is noted, fell heavily. In mines, steamships, dock property, iron companies, electric light and insurance shares, the fall was most marked. The "heavy" railway stocks and the Irish railways were, for the most part, quoted firmer, and a rise occurred in Indian railways. The large profits realized, and the further adoption of the principle of limited liability, tended to advance bank shares. The most striking instances of improvement during the year, however, occurred in Canadian and Mexican railway stocks.

Perhaps the most strongly marked feature of the year, it is pointed out, was the nearly universal fall in the prices of commodities. In iron, particularly, the unprecedented outturn was accompanied by a marked fall in prices and profits. The brightest record of the year, it is said, was in the coal trade. The heaviest commercial failures occurred in the South Wales tin-plate trade. The advices from the woolen and linen districts were not very encouraging, and cotton mills, the *Manual* says, were reported as being a drug on the market. The harvest, however, was fairly good, and the high price of meat benefited the farmers. Food products generally were cheap, and wages were doubtless better able to cover the necessities of life than a year ago. A comparison of Great Britain's foreign trade for eleven months of 1882 with that for the same period of former years would seem to indicate that the imports for 1882 were on a level with those of 1880. The *Manual* thinks that they are in reality in excess of that year, for the reason that prices of commodities were, as a rule, much below the level of 1880. It appears that the imports of animal food were small. The imports of raw materials for manufacture were exceptionally large. As regards the exports, on the other hand, those of iron and steel and machinery indicate a large expansion. The cotton trade suffered, it is said, from the surfeited condition of the Indian markets, and the depression in China and the Levant. The woolen exports, which showed an expansion in the early part of the year, fell off toward the close. On the whole, the export trade is regarded as having been far less satisfactory at the end than at the beginning of 1882.

As regards the money market, it appears that the bank published rate was not a criterion as to the general rate of discount, for, except at one or two momentary periods of scare, the bank was underbid even to a greater extent than in 1879. During the last six months of the year the market rate averaged nearly 1 per cent. below the bank. The profits of the bankers, however, were unusually high. The market rate, the *Manual* notes, was higher on the average than in any year since 1874, and the bank rate higher than since 1873, and it adds that, since no interest was allowed on current account, it follows that these higher rates represented correspondingly augmented profits on the bulk of the resources. During the year just closed Great Britain imported about £2,500,000 more gold than it exported, and this balance was all sent into the bank, yet it appears that no apparent increase of strength resulted, the coin, bullion and reserve being as low as at the end of the preceding year.

POSITION AND OUTLOOK AT NEW ORLEANS.

Our New Orleans correspondent writes under date of January 14 as follows: Trade generally has been disappointing since the opening of the commercial year the 1st of September. Occasionally spurts have prevailed, but their influences have been evanescent, and the cheerfulness stimulated has been followed by greater depression than before. The prices of spot cotton have been comparatively lower than since the war, and as receipts at all ports are 421,123 bales more, and have increased only 66,064 bales here, cotton men are becoming apprehensive that the railroads, which were to be the salvation of New Orleans, are making it a way station. Besides, the cotton trade are awakening from their Rip Van Winkle sleep, and begin to think that something will have to be done to cheapen the handling of cotton here before the trade is entirely diverted. The sugar business is still conducted upon antediluvian principles, but planters have declared open war against the present system, and demand that their sugars shall not be slaughtered and that they must be sold by sample in an open exchange. The tariff agitation at Washington, and the clause in the Mexican reciprocity treaty in regard to importing Mexican sugar, has considerably unsettled this market lately. The receipts of sugar here thus far this season equal about 125,000 hogsheads, calculating four barrels to the hogshead. It is estimated that there are still 50,000 to 75,000 hogsheads to come in from plantations, and some of the big "bears" estimate as high as 100,000. Receipts of wheat to date have been 4,111,582 bushels, against only 236,385 bushels to corresponding time of last season. The receipts of corn, however, are only 255,601 bushels of bulk, against 1,474,807 for the same time last year. Owing to an increase in the export trade to Cuba, the arrivals of flour have increased nearly 100,000 barrels. The provision trade, though a little better than last year, has been confined to a moderate local movement and a small interior business. Money, though unprecedentedly stringent up to the close of December, subsequently relaxed, and is quoted easy on call at 7@8 per cent. in bank, and 6@7 on the street. Securities generally have shown a marked appreciation, especially bank and insurance shares and premium bonds; the latter attained 87⅜ last week, the highest point ever reached. But notwithstanding the serious drawbacks which that trade has encountered here, everything seems to be looking up, and a more cheerful feeling prevails, without, however, any briskness or buoyancy.

OCCASIONAL NOTES.

If there is one thing more than another that BRADSTREET'S has endeavored to impress upon the community it is that the only efficient check upon the abuses to which the business and fiduciary relations of man with man are liable, especially under the complications which have been introduced by modern credit methods, lies in a system of strict and frequent accounting. That our remarks have not been in any degree superfluous, and that the sleepy security of mankind stands in constant need of being reminded, there are abundant evidences everywhere. It is not, as we have remarked, in private dealings alone that the enforcement of a proper method of accounting is necessary. The same thoughtless and ruinous methods, through perseverance in which individual fortunes are involved and dissipated, will avail in time to cripple the resources of a city or a nation. An interesting and instructive commentary upon our remarks is furnished by the case of Polk in Tennessee. It would be reasonable to suppose that a debtor state, whose crippled resources could form the only palliation for its shifty attitude in regard to its financial obligations, would feel the necessity of guarding its treasury, if not from depletion through extravagance, at least from the more simple and elementary kinds of pillage. And yet it appears that Polk abstracted from time to time some $400,000 from the treasury of the state. The defalcation began about five years ago, and, during the period that has elapsed since then Polk's embezzling process seems to have gone on without a check of any kind. A public office in which such an occurrence is possible is indeed sadly in want of a system of "checks" and "balances."

An article in the London *Times* recalls and illustrates what has already appeared in BRADSTREET'S in relation to the financial difficulties in which the French ministry recently found itself involved. The present budget, the *Times* says, will be remembered in the future for having attracted a greater amount of attention outside the legislature than any former budget. Three successive Ministers of Finance have had a hand in its preparation. It was originally planned fourteen months before the time of its introduction, during the ministry of M. Léon Say; it then passed through the hands of M. Allain Targé, whose financial policy differed from that of his predecessor, and finally M. Tirard, who succeeded M. Targé, unsettled the estimates, it is said, in trying to effect a compromise between the schemes of his predecessors, who represented rival schools of French finance. The situation, as nearly as it can be understood at present, appears to be as follows: Owing to an unexpected decrease in the yield of indirect taxation the treasury received in the course of the financial year less by about £4,000,000 (according to the *Times'* figures) than had been anticipated in the ordinary budget. On the other hand, it appears that the sums expended on account of public works, the estimates for which were included in the extraordinary budget, exceeded the credits voted by nearly £4,000,000. This makes a difference between liabilities and income of nearly £8,000,000; but M. Tirard denies that this constitutes a deficit, because he does not propose to raise the extra money required by loans or fresh taxes, but hopes to draw part of it from an improvement in next year's revenue and part from the appropriation of unexhausted credits for certain public works which can be adjourned.

The *Times* lays great stress, as BRADSTREET'S has already done, on the vicious system of accounting which prevails in the French exchequer, and which has involved the budget estimates in such confusion that the country had no means of arriving at any definite knowledge as to the real state of affairs. This system, the *Times* says, was invented under the empire, when it was of political importance that every year's budget should be arranged to show a surplus, notwithstanding that each succeeding *Compte Définitif* would invariably disclose a deficit. The aggregate of deficits from 1852 to 1869, according to the *Times*, amounted to more than £85,000,000, but during all this time the efforts of the opposition to check the extravagant estimates submitted by the ministers were unavailing. The chief point of difference between the Republican ministers and those of the empire appears to be, as the *Times* remarks, that the former do not conceal their losses of revenue. They are equally open to the charge of continuing a system of accounting which can only serve to bewilder and confuse the deputies and the nation. That even the ministers themselves are not free from the confusion which the system referred to tends to create and foster is apparent from the fact that M. Say and M. Tirard have differed so widely in regard to the estimates for the year, and that the latter and his colleague, the Minister of Public Works, have been unable to agree as to whether a sum of £6,000,000 out of the credits voted remains still available.

The extent to which French credit was injured by the crisis of January last is shown by a comparative table of prices of the shares in institutions of credit, banks, etc., at the close of 1881 and of 1882, which is printed in the *Semaine Financiére*. It appears that of thirty-two establishments mentioned not a single share has risen during the year, and the shares of all but one—the Crédit Industrial—have fallen. There is nothing strange in the fact that the shares of institutions connected in any way with the management of the Union Générale should have fallen very much. But it seems that even the institutions of the highest credit have suffered in a marked degree. For instance, the shares of the Bank of France lost 415 francs, and Crédit Foncier shares 465 francs. This experience was not confined to shares in banking companies. Suez Canal shares fell greatly. The shares of the Paris gas companies and those of the Compagnie Transatlantique and the Messageries Maritimes also show a decline. The greatest fall appears to have been in the shares of French fire insurance companies, though the decline in these does not seem to have been so marked during last year as it was for the year before.

The remarks of the Paris *Bourse* upon the situation are extremely sensible. While conceding the evil influence of the doings of the Union Générale, it recognizes that such follies could not have been committed but for the poisoned atmosphere in which that now notorious institution lived. The evil from which the market suffered, it continues, went on unnoticed from 1878 to 1881. Extravagant illusions were entertained even by highly practical people, uncertain instead of fixed revenues were taken as a basis of capitalization, and a mere rumor of the value of a security was considered sufficient to dispense with any examination. The depreciation which has taken place in the market price of most securities represents, the *Bourse* continues, rather a loss of illusions than a money loss. For instance, although the Suez Canal shares declined in value, yet the receipts of the canal show a marked increase, so that the *bona fide* holder of Suez shares can console himself for the decrease in the market value of the shares by the increase in the revenue. It appears also that many industrial securities, which for the time being are absolutely unsalable, yield, nevertheless, substantial returns. Of course a number of second-rate enterprises are doomed to disappear. The *Bourse* concludes that the work of liquidation has made a great stride forward, and it expresses the hope that a rational situation has been arrived at which will allow of a revival all the more fruitful that people have grown wiser and are no longer ready to rush headlong into all kinds of worthless combinations.

According to the report of the Controller of the Russian empire on the definite regulation of the budget of 1881, the total expenditure amounted to 762,393,837 roubles, and the total receipts to 651,754,009 roubles, showing a deficiency of 110,639,827 roubles, or, estimating the rouble at two shillings sterling, somewhat over £11,000,000. The showing is bad enough on its face, but is to be regarded much more seriously when it is considered that the condition of the finances was much worse in 1881 than in the preceding year. Large increases are apparent in all the items of expenditure, the most important being in the charges for the debt, the army and the navy, which together amount to nearly two-thirds of the whole expenditure of the empire. The increase in the charge for the public debt since 1877 is nearly 70 per cent. Although no statement of the cost of the Russo-Turkish war is presented by the Controller, it is probable that much the larger share of the increase of the debt is owing to the war. Part of the extraordinary growth of the debt is undoubtedly to be attributed to the construction of railways, which Russia has been recently pushing forward at a rapid rate.

A fact which invites reflection is that the cost of the Russian army last year was considerably more than one-third of the total outlay of the empire, and that this item of expense has been steadily growing since 1877. The magnitude, constitution and geographical position of Russia doubtless require the putting forth of great efforts to increase the military efficiency of the empire, and apparently these efforts are as yet only in their beginning. On the other hand, it appears that the limit of productiveness has been reached in taxation, at least as far as direct taxes are concerned. The personal and land taxes yielded less in 1881 than in 1877, 1878 or 1879, though somewhat more than in 1880. The spirit duties returned less than in 1879, though more than in 1880, and the receipts from the customs were less than in either 1879 or 1880. It is evident that if Russia would avoid the most serious and distressing complications she must enter upon a vigorous policy of retrenchment. If it were not that a belligerent nation is rarely prevented from fighting for want of funds, the enemies of the empire might well regard her as disabled from pursuing the dreams of aggrandizement which she is credited with cherishing.

In an article on "The Experiment of Universal Suffrage," in the current number of the *North American Review*, Professor Alexander Winchell takes a very gloomy view of our present political condition, and holds up a more discouraging picture of the future of the nation. Intelligence and virtue, he says, in effect, have created modern civilization, are entitled to control it, and can alone sustain it. The regulation and government of civilization ought to reflect the highest wisdom and virtue among the people. This, a political system like ours, based upon simple manhood suffrage, does not do. Professor Winchell portrays vigorously the evils to which our system is subject, but does not give a very definite idea of the changes which he wishes to see introduced, beyond demanding that "absolute political control should not be exercised by the masses;" that women, property and the family shall be represented, and that disfranchisement, temporary or permanent, shall be visited upon drunkards and persons convicted of crime. The professor's definition of suffrage as a "privilege," instead of as a trust or as a "right," is likely to afford a handle to the democratic opponents of such changes as he would introduce. The causes of the defeat of the Republican party in so many states in the late elections are discussed by Horatio Seymour and George S. Boutwell in two articles on "The Political Situation." The former attributes the result to a popular revulsion from Republican doctrines of centralization; the latter thinks that the overthrow was owing to the error of the Republican party in neglecting to revise the tariff and internal revenue systems, and to consider the subject of civil service reform. "The Standard Oil Company" forms the subject of two articles, one by Senator Camden, of West Virginia, in defense of that corporation, in which the writer maintains that "this great bugbear is nothing more nor less than an organization of laborious, painstaking men, who, with great abilities and great opportunities, have made a great success by legitimate means in a legitimate business"; and the other by Mr. John C. Welch, who condemns the corporation as a dangerous monopoly, and charges that it has been its aim to make the business non-competitive through control of transportation; that the railroad managers have coöperated with it in this aim, and that its relation to railroad transportation out of the oil country has enabled it to drive competitors out of business as shippers and refiners of petroleum.

SPECIAL CORRESPONDENCE.

THE MEXICAN AND HAWAIIAN TREATIES.

Washington, January 18.—The movements of business men to secure reciprocity treaties with different countries meet with little favor in Congress. There is now manifested a greater disposition to abrogate the Hawaiian treaty than there is to negotiate a new treaty with any country. The importance of our trade with Mexico is well understood, and is admitted.

The value of exports to Mexico from the United States for the year ending June 30, 1881, amounted to $9,198,077, while the value of the imports from Mexico amounted to $8,317,802, showing an excess of exports of $880,275.

For the year ending June 30, 1882, the value of exports amounted to $15,482,582, while the amount of imports amounted to $8,461,899, which shows an excess of exports of $7,020,683, being an increase in the excess of exports over the year ending June 30, 1881, of $6,140,808. This was under an exceedingly high Mexican tariff.

All commercial men who have any knowledge of our business relations with Mexico are confident that a reciprocity treaty would furnish a better market for American products, while it would tend to cheapen the necessaries of life, and some of the luxuries, to American commerce. A treaty, the provisions of which are not officially known, but which there can be no doubt offers substantial advantages to the United States in many directions, has just been agreed upon by the commissioners of the two governments appointed to consider the subject.

But politics and the tariff are to be used as agencies to defeat the ratification of the new treaty, and, from present indications, these agencies may be successful. The proposed Mexican treaty, it is semi-officially stated, permits the free importation into the United States of sugar, tobacco, hemp, jute, various grasses extensively used in manufacture, and other raw products of Mexico, while permitting the exportation to that country from the United States, duty free, of agricultural and mining machinery, textile fabrics, and some other articles. The very announcement that the treaty proposed to permit the free importation of sugars has arrayed against the project the Louisiana sugar interest, the northern refiners, and the various elements which favor the abrogation of the Hawaiian treaty. The Mexican treaty has, therefore, been brought to Washington at a time when the strongest forces which have ever been assembled in favor of the abrogation of a treaty are there in force presenting arguments, and making appeals, for the abolition of the treaty with the Sandwich Islands. The same energy which the representatives of these interests have displayed in favor of the proposed abolition of the treaty with Hawaii, they have brought to bear to forestall public opinion in opposition to the proposed treaty with Mexico. And, according to their own statements, they have been successful. Our advices from Washington are that the Louisiana sugar men have received such assurances from senators and representatives, after a thorough canvass of the two houses, that they are confident, not only that there will be no Mexican treaty to affect the sugar trade, but that there will be no tariff legislation upon that subject, unless it shall be the adoption of the recommendations of the Tariff Commission. As the sugar schedule of the Tariff Commission was drafted by representatives of the Louisiana sugar interests, they have nothing to fear on the latter account. The reductions made by the Ways and Means Committee in the last draft of their bill may weaken the confidence of the Louisiana sugar men.

An argument not less effective in opposition to the proposed Mexican treaty is that it has its origin largely in the interest of the Jay Gould system of Mexican railway concessions. Whether this statement is true or not, it is having, unquestionably, very much to do with the opposition in the Senate to the treaty, even before that document has been sent to Congress. The ingenious argument is made that some of the railway concessions in Mexico, which are rivals of the Gould project, are much more dependent upon the customs revenues of that country than Gould's railway is, and that one very efficient means of destroying a rival dependent upon subsidies from the Mexican government is to destroy the source from which that subsidy can alone be obtained. These various Mexican grants provide for certain subsidies which are to be collected from the customs receipts of Mexico. If the proposed commercial treaty should deprive Mexico of the greater portion of these customs receipts, it is easy to see that the subsidies would be endangered.

Possibly, when the text of the proposed treaty shall have been made public it will be found to be less objectionable to certain interests than it is now assumed to be. In that case some of the opposition may be withdrawn; but, as things now stand, those who have given the subject a great deal of attention express the opinion that the Grant-Romero commercial treaty will not be ratified. The difficulty attending the consideration of the proposed Mexican treaty is that the public is not advised with accuracy as to the articles which are to be embraced within its provisions. All proceedings connected with the negotiation of the treaty are secret, and the consideration of the treaty by the Senate is secret. Some of the wisest legislators are of opinion that this system is wrong, and that the Senate ought not to be permitted, in times of peace, at least, to consider measures vitally affecting the commercial interests of the people behind the closed doors of executive sessions. General Grant has expressed the opinion that when the full details of the proposed treaty shall become known it will be popular, and he is also confident that the treaty will be ratified. He answers the argument raised by the Louisiana sugar planters as to sugar by stating that there need be no fear of excessive importations of sugar from Mexico, for the reason that that country does not produce more than one-tenth of the amount actually consumed there. The fear as to the importations of wool he answers by stating that the treaty does not permit the importation of wool except in form of hides.

The advocates of the abrogation of the Hawaiian treaty had thought, prior to the receipt of the antagonistic letters from the State and Treasury departments, that the treaty would be either abrogated or materially modified at the earliest practicable moment. The attitude of the administration makes that now less probable. Indeed, it seems quite likely that the Congress will end without any action having been taken on the subject of the Hawaiian treaty. The State Department has requested that the communication it has made to the Foreign Affairs Committee be kept secret, but it is learned that the department in this communication has indicated a novel method of preserving the political advantages of the treaty, while at the same time making concessions with respect to the sugar tariff which may be satisfactory to the opponents of the treaty. The State Department is unwilling to surrender the rights which the treaty gives to use the Sandwich Islands as coaling stations, especially as it seems probable that, if the United States should abandon the treaty, Great Britain would immediately succeed to all of its advantages, and thus secure the valuable coaling stations which that empire has so long endeavored to obtain in the Pacific ocean.

At the time of the ratification of the Hawaiian treaty the sugar produced in the islands was very crude, owing to the want of improved machinery. Since then the most modern machinery has been put in use, and the sugar now imported from the islands ranks with the best. The suggestion of the State Department is, that the treaty shall be so construed as to permit the introduction into this country, duty free, of such sugars only as are of the character and quality which were imported at the time of the ratification of the treaty. This would exclude the largest proportion of sugars now im-

ported from those islands, and would compel the Hawaiian planters to abandon their machinery, and to resort to cruder methods of manufacture, if they desired to retain the benefits of the treaty. It is thought that this would tend materially to check the importation of sugar from the Sandwich Islands. A decision made last summer by the Collector of New York, which was not sustained by the Treasury Department, looked to such an interpretation of the treaty.

The answer of the Treasury Department, in the matter of the Hawaiian treaty, is disappointing to those who favor its abrogation. The opinions of these two departments as to the political and commercial features of the treaty certainly ought to be entitled to respect. This seems more true, in view of the fact that the agitation in favor of the abrogation of the treaty does not appear to proceed from the people, but to originate in a contest between rival sugar interests of the Atlantic and Pacific coasts and of the Louisiana sugar planters. Notwithstanding the extreme confidence of the representatives of the Louisiana sugar interests and of the Atlantic coast refiners, in view of the attitude taken by the administration, it is quite doubtful whether the opponents of the treaty will have strength enough to secure its abrogation.

RAILROADS CREATING TRAVEL IN MEXICO.

Monterey, Mexico, January 10.—Doubt has been felt by experienced railroad men, both in England and in America, in regard to the possibility of making railroads in Mexico pay. To be sure, the brilliant record of the English road, between the City of Mexico and Vera Cruz, within the past eighteen months has done much to place faith in the Mexican railways upon a firm basis. But this road is the highway between the capital city and chief port of the republic, and, therefore, it has been argued, is not at all to be accepted as a criterion of the roads which enter the republic from the United States on the east and north. Data obtained here in Monterey, on the line of the Mexican National Railway, proves, however, that what has come to be an axiom among railroad men in the States holds good in Mexico as well: railroads create travel and develop trade.

The railway from the United States that passes through Monterey has its eastern terminus at the port of Corpus Christi, Texas. The Mexican portion of the line begins at Laredo, Texas, where the road crosses the Rio Grande. Until about six weeks before actual travel began on the Mexican division of the road there was no regular channel of communication between Laredo and Monterey. Practically, there was no trade at all between the two towns. Passenger travel was wholly by private conveyance, and the journey, under the most favorable conditions, occupied four and a half days; not uncommonly it required eight days. The actual travel was insignificant, averaging, probably, at most, one passenger each way a week. Travel between the interior and Monterey was proportionately light. For a number of years previous to the incoming of the railways two coaches a week arrived from and went out to Saltillo, the first important city south of here on the road to the City of Mexico. A good load for one of these semi-weekly coaches was four passengers. Frequently the coaches brought in or carried out but a single passenger; sometimes they went out and came in empty. This condition of affairs has already been revolutionized by the establishment of rail connection with the United States. Two coaches daily now ply between Monterey and Saltillo, carrying each an average of eight passengers each way; and the average is increasing weekly.

The increase of passenger travel toward and from the interior is the legitimate outcome of the growth of passenger travel between Laredo and Monterey—that is to say, between the United States and northeastern Mexico—within the past twelve months. Almost precisely a year ago, January 9, 1882, the great Texan stage-owner, J. W. Orr, put on a line of coaches between Laredo and Monterey. On the 16th of the ensuing February the coaches began to run between the end of the railway track and Monterey; and from this time onward the end of the advancing track was the beginning of the stage line, until the railway reached Monterey, and through rail travel began on September 1. Between January 9 and February 15 the total number of through passengers carried by coach between Laredo and Monterey was 112; between February 16 and August 31 the total number carried by rail and coach was 1,248. Precise figures for each month are not obtainable here, the returns having been forwarded to the central office in Texas, and some of the way bills having meantime been mislaid, but the following statement is substantially correct:

From Laredo to Monterey.		*From Monterey to Laredo.*	
January	32	January	28
February	51	February	45
March	75	March	68
April	110	April	97
May	136	May	118
June	121	June	114
July	106	July	98
August	95	August	66
Total	726	Total	634

The prevalence of yellow fever last summer in southwestern Texas and along the east coast of Mexico checked travel to a considerable extent. The fever did not get to Monterey—it is unknown here—but the possibility of exposure to it on the way accounts for the falling off in travel in July and August. This same possibility existed in September, but it was powerless against the attraction of the new railroad, and the rush of travel instantly began. Even during this first month of its operation half as many passengers came up from Laredo over the Mexican National as came up by coach and by coach and rail during the entire preceding eight months. How promptly the travel began, and how rapidly it has developed, is shown by the following statement, made up from ticket sales at Laredo and at Monterey:

Laredo to Monterey.		*Monterey to Laredo.*	
September	320	September	147
October	335	October	331
November	388	November	409
December	506	December	526
Total	1,549	Total	1,413

An analysis of this table shows several interesting things. Primarily, a business has been created virtually out of nothing. In the year 1881, and for each of all the years which preceded it, 100 travelers—to continue with the high estimate already given—passed back and forth between Laredo and Monterey. In eight months of the past year 1,360 travelers passed between the two points, partly on the mere promise that a railroad was coming, partly when portions of the railroad were built. In the four succeeding months 3,000 travelers passed over the completed road. And these figures, it will be observed, leave out of consideration the way travel on the line; almost as important a matter as the through travel itself. In September and October it will be observed that the tide of travel is setting in from the United States; in November and December the tide has turned, and has begun to set out from Mexico. This is a most wholesome sign, showing that central and northern Mexico has begun to make use of this new channel of communication with the United States in preference to the old roundabout channel by way of the City of Mexico and Vera Cruz. That this change has really taken place is proved in another way, by the increased stage-coach travel, already mentioned, between Monterey and the interior. Finally, the figures here given show that the theory upon which the road is building—that railways create travel—is as true south of the Rio Grande as it is true north of it, and that the presumption that the road would pay has been practically proved to be a fact.

In broader lines an interesting parallel may be drawn between what has happened here in the construction of a division and what may be expected to happen in the construction of the through line. Through travel overland between the United States and the City of Mexico has begun on the mere promise that a railroad is coming, just as through travel began between Laredo and Monterey; and, as the road advances, this travel increases, just as it has increased between Laredo and Monterey during the past year. With the completion of the road to the City of Mexico the same sudden development of travel may be counted upon, therefore, that has taken place here, only on a far larger scale.

T. A. J.

LETTERS TO THE EDITOR.

STATE OF THE CENSUS WORK.

To the Editor of BRADSTREET'S.

SIR—I have just read the letter of your Washington correspondent, in your issue of the 13th inst., in which the condition of the census work is set forth. I do not know his facilities for acquiring this information, but he appears to be very much at fault, both in his facts and in his opinions.

The only charges which can be brought against the management of the census are those of miscalculation regarding the amount of money and of time required for its completion. That such mistakes should have been made would seem not unnatural when we consider the magnitude and the novelty of its plan. Further, the total cost of the tenth census will be but very little, if any, greater per head of population than the ninth, and the reports will be but very little, if any, later in publication; and this, in spite of the fact that its scope has been immensely increased. The sum appropriated for the ninth census was, in round numbers, $3,400,000, exclusive of printing; that for the tenth, exclusive of that for publication of reports, $4,565,000, making, with the deficiency now asked, $4,665,000, or a little more than 9c. per head, against a little less than 9c. per head in 1870. The first volume of the reports of the ninth census (the Compendium) saw the light about the end of 1872, and it was not until 1874 that their publication was completed. On the other hand, the volumes of the tenth census commenced to appear in 1881, and, judging from the fact that nearly all the reports are now either published, in type, or in manuscript in the hands of the Census Office, their publication is only a question of the capacity of the Government Printing Office. In this connection it is scarcely necessary to say that the list of published reports, as given by your correspondent, is absurdly incomplete. Including complete reports and integral parts of reports, over 2,300 pages have already been issued, or more than one-seventh of the total estimated bulk of the reports. This does not take into account the bulletins, or the matter which is now stereotyped and ready for binding. The following reports have been published: Population—Part I; Public Indebtedness (which is the volume probably referred to by your correspondent as "History of the National Loan"); Oyster Industry; Fur Seals of Alaska; Iron and Steel Production; Silk Manufacture; Fire-arms; Cotton Production in Louisiana; Water Power of the South Atlantic Watershed; Railroads of the New England Group; Gold and Silver Production; Waring's New Orleans and Austin; Manufactures of Twenty Principal Cities. It will be seen that this list differs materially from that given by your correspondent.

To further illustrate his want of exact knowledge, I will state that the manuscript for the Compendium is in the printer's hands, and was at the date of his letter.

Adverse criticisms have been made upon the Census Office for putting the whole force upon the Compendium at the expense of other work. It may be pertinent to suggest, that as the Compendium is made up from the more extended tables of the full reports, work done upon the former contributes even more directly to the latter, and the completion of the Compendium implies the practical completion of the statistical portion of the full reports. The value of this criticism is apparent.

Your correspondent criticises Col. Waring's "History of New Orleans" (*sic.*) He should know that Col. Waring's department concerns the organization and internal economy of all our larger municipalities; their government, sanitary arrangements, police, water-works, streets, parks, etc., a subject which very properly belongs to the census. The history to which, in the case of New Orleans, Mr. Cable has given, perhaps, undue prominence, forms but a minor feature. There are a number of other mistakes in the letter under review, such as the list of reports ordered printed. The fact is that Congress ordered *all* the reports of the census, by one act, passed last summer. Again, there is no disposition whatever in the Census Office to blame the Government Printing Office for any delays which the work may have suffered. On the contrary, it is thoroughly understood that congressional work proper has had the right of way.

It is doubtless true that our forefathers in framing the Constitution did not have in view so elaborate and costly a census. I may add that there were many other things not only desirable, but necessary, which they did not foresee and could not have foreseen.

H. G.

Washington, D. C., January 15.

["H. G." seems to be of the opinion that our Washington correspondent, in his letter on the condition of the census work, aimed to subject the census management to undue criticism. It seems to us that a fairer view would be that our correspondent was actuated only by a desire to report, as nearly as possible, the exact condition of the census work, concerning which public attention has been somewhat exercised, and to present the facts to the public. He says, it is true, what "H. G." in substance admits, that there has been some miscalculation as to the amount of money required for the completion of the work, and also that there has been some delay in pushing the work, which, in part at least, is attributable to the census management. "H. G." lays stress upon the fact that the list of published reports given by our correspondent is incomplete. It is not unlikely that the apparent discrepancy arises from the fact that our correspondent groups under general heads many of the special reports which are particularized in "H. G.'s" letter, as, for instance, "Oyster Industry" and "Fur Seals of Alaska" under "Fisheries," "Iron Steel Production," "Firearms," etc., under "Mechanics," etc. "H. G." makes no reference to the fact that an entire outfit of type for the "Congressional Record" had to be purchased by the government printer, for the reason that the census office failed to get the "copy" in before the meeting of Congress. "H. G." states that the manuscript of the Compendium was in the hands of the printer at the date of our correspondent's letter, but he does not state how long it had been there. But all this relates to minor points. The mistake of the census officials was in not asking at the outset a sum fully equal, beyond peradventure, to the completion of the census, however large its scope. Their mistake now is in not taking a bold stand by the adoption of some straight line which will take them out of the difficulty. It should not be necessary for Congress to enter upon an investigation of the conduct of the census. Those now in charge should present a statement of facts which all could understand.—ED. BRADSTREET'S.]

LEGAL NOTES.

A question of interest to importers of foreign liquors was passed upon by the Supreme Court of the United States on the 15th inst. In the case of Schmidt et al. vs. Badger, collector, the court affirmed a decision of the Circuit Court of the United States for the Eastern District of Louisiana, holding that the bottles in which ale and beer are imported are subject to a duty of 30 per cent. *ad valorem* in addition to the duty of 35 cents per gallon on the ale and beer imported.

The proper measure of damages upon an unauthorized sale by a broker of stock held for a customer was discussed in the recent case of Colt vs. Owens et al., decided in the New York Court of Appeals, November 21, 1882. The defendants, upon a guaranty against loss by a third party, purchased and agreed to carry for the plaintiff a quantity of stock until instructions were given by him to sell, or for a period of six months. The guarantor afterward notified the defendants that he withdrew his guaranty, and they thereupon gave notice to plaintiff that unless he placed a margin in their hands at a time named on the next day the stock would be sold. The plaintiff failed to comply with the demand of defendants, and the stock was sold. Upon the trial of an action against the defendants for the breach of their agreement, it appeared that for thirty days after the sale the same stock could have been purchased in the market for the price at which it was sold, or for a less sum. The court held that, assuming the sale to have been unauthorized, the plaintiff was entitled to recover only nominal damages. The true rule was said to be that where a broker purchases stock upon a margin for a customer, and makes an unauthorized sale of the same, the principal has a right to disaffirm the sale and to require the broker to replace the stock, and upon failure or refusal to do this the remedy of the principal is to replace it himself, and the advance in the market price from the time of the sale up to a reasonable time to replace it after notice of the sale affords complete indemnity and is the proper measure of damages.

The introduction of the telegraph as an agent of communication has been, comparatively speaking, so recent that the law fixing the relations of telegraph companies and their customers cannot be said to be very well defined. Although, according to some well considered cases, sending a telegraphic message is not a bailment, yet a disposition has manifested itself to find analogies between the transmission of messages and the carriage of merchandise, and rules similar to those which govern the liability of common carriers have been applied, in some instances, to the acts or omissions of telegraph companies or their agents. One class of cases of considerable interest and importance is that of dispatches in cipher. A question of this kind came up recently in a case in Kentucky, where a St. Joseph merchant directed a cipher dispatch to be sent to a Louisville factor regarding an immediate purchase of provisions, but where, in consequence of the operator's mistake in dating his message at St. Louis, to which place the answer from Louisville was sent, the purchase went off and the factor lost his commissions. To recover the value of these he sued the telegraph company for damages. The only evidence of negligence was that implied in the mistake of St. Louis for St. Joseph; nothing on the face of the message indicated its value, and it was unrepeated, whereas on the blanks the ordinary notice was printed that, for unrepeated messages, damages could only be measured by the cost of the dispatch. Vice-Chancellor Simrall, in giving judgment for the telegraph company, said that, in sending a cipher dispatch where the contents and value

of the message are not disclosed, the same rule as to the measure of damages does not apply as in the case of an ordinary dispatch where the loss or damage likely to occur is obvious from the terms of the message. "The true rule is that the company is responsible only for such damage as is apparent on the face of the dispatch, or such as was reasonably within the contemplation of the contracting parties. The object of a cipher dispatch is twofold: First, to conceal its contents; second, to decrease the number of words, and thereby reduce the cost of transmission. If the value of the contents of a package is concealed from a common carrier, whereby a low rate of freight is procured, it is released from responsibility except for negligence; although, ordinarily, the law makes it an insurer against all loss, except from the act of God or the public enemy. We do not believe that any respectable authority maintains that a telegraph company is liable for the same degree of care as a common carrier. In this case, according to the proof, while the message on its face imported a commercial transaction, yet it may have been only a quotation of prices, and its real contents were so concealed by the part in cipher that it was impossible for the company to form any idea of the extent of the damage which might be sustained by a mistake in the message."

Another stage has been reached in the progress toward a settlement of the question raised last summer by the application of the Attorney-General of the state of New York, in the name of the people, for a mandamus to compel the New York Central and Erie railroad companies to receive and deliver promptly all such freight and other property as might be offered to them at the usual and reasonable rates. As will be remembered a hearing was had before Judge Haight, at chambers, in response to orders directing the companies to show cause why they should not be compelled to resume forthwith the discharge of their duties as common carriers. Judge Haight denied the application of the Attorney-General and refused the peremptory writ of mandamus, holding in effect that the proper remedy for any person aggrieved by the conduct of the railroad companies was by an action for damages. This decision of Judge Haight was reversed by the General Term of the Supreme Court on the 17th inst. The decision of the court, written by Presiding Justice Davis, after commenting upon the unusual mode of procedure in the court below, goes on to consider the appeal upon the merits. "The question presented by the motion," it says, "is one of signal importance. It is whether the people of the state can invoke the power of the courts to compel the exercise by railroad corporations of the most useful public functions with which they are clothed." The court holds that the people have that right, that railroads are in every essential quality public highways created for public use, but permitted to be owned, controlled and managed by private persons; that, no matter by whom a road is built or owned, the functions performed are those of the state, and that the railroad corporation by accepting the trusts imposed upon it becomes an agency of the state to perform public functions which might otherwise be devolved upon public officers. The court adds: "The analogy between such officials and railroad corporations in regard to their relations to the state is strong and clear, and, so far as affects the construction and proper and efficient maintenance of their railroad, will be questioned by no one. It is equally clear, we think, in regard to their duty as common carriers of persons and property. This springs sharply out of the exclusive nature of their right to do these things. On other public highways every person may be his own carrier, or he may hire whomsoever he will to do that service. Between him and such employé a special and personal relation exists independent of any public duty and in which the state has no interest. In such a case the carrier has not contracted with the state to assume the duty as a public trust, nor taken power to do it from the state by becoming the special donee and depositary of a trust. A good reason may therefore be assigned why the state will not by mandamus enforce the performance of his contract by such a carrier. But the reason for such a rule altogether fails when the public highway is the exclusive property of a body corporate which alone has the power to use it, in a manner which of necessity requires that all management, control and use for the purposes of carriage, must be limited to itself, and which, as a condition of the franchise that grants such absolute and exclusive power over a user of a public highway, has contracted with the state to accept the duty of carrying all persons and property within the scope of its charter as a public trust. * * * It is the duty of the state to make and maintain public highways. * * * It is not the duty of the state to be or become a common carrier upon its public highways, but it may in some cases assume that duty, and whenever it lawfully does so the execution of the duty may be enforced against the agents or officers upon whom the law devolves it."

BUSINESS NOTES.

The iron age in building in New York city is declared by a local architect to have passed. The return is to brick and stone, "to first principles," as it were. Of the two classes of material, stone (artificial, as bricks) and iron, it is stated that brick will, "under a rational order of things," survive for centuries, while iron will give way in the first hundred years.

The total number of failures in the United Kingdom reported to *Kemp's Mercantile Gazette* (London) for the week ending December 30 were 139, against 140 in the concluding week of 1881, and 167 in the last seven days of 1880. England and Wales had 113 in the last week in December, 1882, against 117 and 150 respectively in like weeks of 1881 and 1880. Scotland had 21, against 18 and 13, and Ireland 5, against 5 and 4.

The Paterson, N. J., silk operatives have followed their brethren who, at Cleveland, recently, in convention assembled, found fault with the existing high tariff, and declared that it was no benefit whatever to the employé. The Paterson speakers further alleged that by aid of the tariff the manufacturer gets all the benefit, building additional mills, palatial dwellings and stables, instead of increasing the wages of the hands. Such views appear to be spreading among the employés of various industries.

The new contract between the Mexican government and the National Construction Company, engaged in building the Mexican National Railway, precludes the possibility of the forfeiture of that portion of the road already completed, some 434 miles, about six weeks ago. The subsidy of $11,270 per mile to be paid by the Mexican government is to be obtained by taking 6 per cent. of the gross receipts of all the custom houses of the republic. The original concession granted only 4 per cent. The payment of 6 per cent. of all duties in the company's certificates will be obligatory on merchants. The ports of Manzanillo, Matamoras, Mier and Nuevo Larrado are to be open to the foreign and coasting trade.

The total output of iron ore and pig iron from the Michigan and Lake Superior mines and furnaces since 1853 is reported by the Marquette *Mining Journal* at 20,585,757 gross tons of ore and 916,213 tons of pig iron, or, in all, 21,501,970 gross tons, valued at $164,835,895. It was not until 1873 that 1,000,000 tons of ore were mined in one year in that region, after which the annual output fell off again until in 1877, since which date the production has steadily increased. The figures in detail are as follows:

Year.	*Ore.*	*Pig iron.*	*Ore and pig.*	*Value*
1877	1,025,129	29,635	1,054,814	$5,299,595
1878	1,125,093	17,404	1,142,497	6,881,432
1879	1,414,162	39,583	1,453,765	11,413,114
1880	1,937,598	46,523	2,030,121	19,457,427
1881	2,321,315	52,953	2,374,268	20,195,013
1882	2,943,314	72,932	3,016,276	26,243,620
Totals	20,585,757	916,213	21,501,970	$164,835,895

Bombay mail advices to December 7 speak of an approaching revival in trade in India, but evidences are given that renewed business activity is near at hand. The receipts of cotton were falling away, and the exports of Indian cotton were diminishing, owing to the tone of the English markets and advancing freights. It is a noteworthy fact that the hardening tendency of the freight market "was attributed to the existing and prospective demand for steamers for the American trade." This report accords, therefore, with the explanation made in these columns, from time to time, of the ultimate effect of the high rates of freight for charters from the United States. It was also added that there was good reason to doubt whether the Indian export trade will not suffer seriously this season in consequence of the available surplus of cotton and corn for export in the United States.

The leading features of the British labor market for the week ending January 3, as reported by the London *Labour News*, are in the main encouraging. At Barnsley "the demand for goods for New York" was good, and the spring trade promised well. In Sheffield there were a fair quantity of orders on hand. At Sunderland the dispute in the glass-bottle trade continued, but the glass trade was good. The textile trades were quiet. At Bradford the chimney accident had had a depressing effect, but the trade in special lines of goods was very active. This fact stands out in welcome contrast (to the British business community) when compared with the depressed condition of the French woolen industries, the latter, not many months ago, having a good trade and the Bradford mills being correspondingly without orders. The British boot and shoe trade continued dull. At Manchester business was quiet, but an improvement was looked for at an early date. The demand upon the manufacturers of machinery at Birmingham was good, notably so from Australia and New Zealand. Hardware makers were not being rushed.

Cotton-yarn spinning mills have been built and operated in Japan of late years, but without success, owing to the expense of manufacture and the necessity of importing the raw material. Another effort is now to be made which will involve spinning and weaving. Two Japanese gentlemen are engaged in the enterprise, and have put into it a capital of 350,000 yen, nominally that number of dollars. The establishment will be fitted with 10,000 spindles, the machinery having been ordered from England. The management of the works will be in the hands of a gentleman, a native, who has gone through a course of instruction in spinning and weaving mills at Manchester and Blackburn, England. The *Japan Gazette* considers that the scheme has a better prospect than its predecessors, for "while the manufacture of yarn can scarcely pay so long as the manufacturers are compelled to trust to their own supply of fine-staple native cotton, or to import raw cotton at prices subject to great variations independent of the manufactured product, the weaving of yarn into cloth is a process which ought to benefit all engaged in it if it be carried on with skill and economy." It is further suggested that the new industry, if successful, will be a means of earning a living for "the ex-retainers of the military chieftains," and that it "will check importations." Other journals in Japan do not regard the venture as likely to be successful.

A brief summary of Mr. Richard Seyd's annual table of failures in the United Kingdom has come to hand. The totals are given as follows:

	1882.	1881.	1880
Wholesale trades	1,313	1,325	1,478
Retail and professional	9,703	10,680	11,669
Totals	11,016	12,005	13,147

It is pointed out that the figures indicate an improvement in general solvency. There was no failure in banking circles in the United Kingdom against twenty-eight in the United States, as pointed out in BRADSTREET'S of January 6. In the United Kingdom, Mr. Seyd says, the leather and boot and shoe trades and the building and timber firms suffered most from failures in 1882. In BRADSTREET'S analysis of failures by trades for the past year failures among grocers and confectioners were shown to have occurred with most frequency, although but a trifle in excess of the total number of business disasters among general storekeepers. As is well known, the "general store" is peculiarly a product of interior towns, and particularly of trading establishments of towns, cities and villages south and west. The failures of British farmers and coal shippers in the United Kingdom are said to have shown a marked decrease. The Yorkshire woolen industry has again been conspicuous for a large number of failures, indicating the prevalence of unsatisfactory conditions, which indications are confirmed by the fact that several old-established houses have given up business, or are about to do so. The failures in tin-plate trade were the prominent feature at the close of the year.

The following national banks have been organized: The Linderman National Bank of Mauch Chunk, Pa.; capital $50,000; James I. Blakslee president; S. S. Smith cashier. Farmers' National Bank of West Chester, Pa.; capital $100,000; Samuel Butler president; William Dowlin cashier. The First National Bank of Jessup, Iowa; capital $50,000; Thomas Taylor president; George S. Murphy cashier. The Drovers' National Bank of Union Stock Yards, Ill.; capital $100,000; S. Brintnall president; Henry G. Brainard cashier. The First National Bank of Midland City, Mich.; capital $60,000; Milton P. Anderson president; William D. Marsh cashier. The Lima (Ohio) National Bank; capital $100,000; Silas W. Moore president; Frank L. Langan cashier. J. L. Smith & Co., bankers, of Golden, Col., have been succeeded by the Jefferson County Bank. James Laughlin, president of the First National Bank of Pittsburgh, is dead. James Collery has been elected president of the City Savings Bank of Pittsburgh. The Cambridge Valley National Bank of Cambridge, N. Y., has elected D. M. Westfall president in place of M. D. Hubbard. The Caledonia National Bank of Danville, Vt., has elected J. W. Simpson president in place of S. Ingalls. The First National Bank of Hartford, Ct., has elected C. S. Gillette president in place of E. H. Crosby. The Highland National Bank of Newburgh, N. Y., has elected M. C. Belknap president. The Souhegan National Bank of Milford, N. H., has elected C. S. Averill president in place of R. R. Howison. Nelson Ludington, president of the National Bank of America, Chicago, died on the 15th inst. Adam Davis, president of the First National Bank of Corry, Pa., has resigned, and H. O. Larkin succeeds him.

CONFLICTING TARIFF VIEWS.

Mr. James M. Swank, Secretary of the American Iron and Steel Association, thus takes to task, in *The Bulletin*, certain New England journals:

"What does this paragraph, from the Boston *Daily Advertiser*, for January 8, mean if it does not mean something very much akin to free trade?—

"'The whole manufacturing interest of the country, it must be owned, is very profoundly affected by the tariff debates, whatever their issue. If, unfortunately, the present Congress fails to give a new tariff which can live for some years to come, the debate will be thrown among the people, and must be left to the settlement of a new Congress. There is no telling what would happen in that case. But, wholly aside from the politics of the matter, any change in the tariff is a temporary check upon business, and the prospect of wholly incalculable changes cannot but work disastrously or unfavorably. If Congress will indicate its pleasure it will be just so much gain to business, although anything else than a bold reduction of tariff rates will fail to give satisfaction, and must give enormous advantages to the enemies of the protective principle. Those who are carrying everything before them in committee may find a year hence that their victory has been dearly bought.'

"That is to say, if the *Advertiser* would speak plainly: the whole manufacturing interests of the country are profoundly and injuriously affected by the proposal of the Tariff Commission to reduce duties, and these interests cannot be restored to their recent active and prosperous condition unless Congress shall go farther even than the Tariff Commission and give us 'a bold reduction of tariff rates,' upon the principle, we suppose, that the hair of the dog is good for the bite. In the old days of the *Advertiser* it would have declared with trumpet tongue that our manufacturing industries need a continuance of that wise protective policy the mere hint of abandoning which has recently so 'profoundly affected' them.

"And then, what does this mean in that other always, until of late, reliable protectionist organ, the Boston *Commercial Bulletin*, for December 30?—

"'David A. Wells, the "knight of the scissors and the paste-pot," has started in again to prove, what everybody already knows, that the American industries do not need for their protection so high a tariff as they have heretofore had, and to prove that protection does not enhance wages; just as though there were no grounds for a protective tariff even if it didn't enhance wages. * * * The American people are intelligent, and they know that the tendency of all trade is toward what is known as free trade; they know that ultimately this country must adopt free trade, and they also know that protection is the shortest cut to that end. The best real free traders are to-day protectionists.'

"The last sentence above quoted cannot be true, for we know of no sound protectionist anywhere who teaches that protection leads to free trade. The protective doctrine in this country, we respectfully submit to our friends of the *Bulletin*, does not exist and is not maintained to enable the New England manufacturer, or any other manufacturer, *eventually* to grind labor down to the wages of Old England; nor to enable him to get his raw materials from foreigners at such rates of duty as will compel the producers of like raw materials in our own country to go out of business. It is not a device to enable the manufacturer to make his goods *cheap*. It exists, rather, that he may be enabled to pay good wages to labor, to the end that it may be contented, elevated and strengthened for all the duties of American citizenship, as well as that it may receive the reward which capital should rightly share with it. Protection means in this country, and always has meant, the welfare of labor as well as capital; but when has free trade been known to concern itself about labor? Protection in this country cannot, therefore, lead to free trade, now or hereafter, because free trade means European wages, the hovel, degradation and despair. If New England is turning its face toward the flinty selfishness which brings these results we feel sure that the rest of the country is not. But we have a better opinion of New England, and prefer to believe that it is being misrepresented by its newspapers."

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

The deadlock which existed in the stock market was spoken of at some length last week, and the utter stagnation of business which was a consequence of it. At the same time it was remarked that it was unlikely the situation would continue very long.

The conditions of trade (it was remarked) and the known situation of the leading operators point to a renewal of activity in the near future; and it would not be surprising if this activity, when it does fairly begin, should be extreme enough to fully compensate for the present stagnation. At present it is quite impossible to guess what direction the movement would take; but it would probaby be safer to count on a movement to depress prices than one to put them up.

The first part of the above has proved correct; the second wrong. The deadlock in the market was broken this week by an upward movement, which went on with increasing strength and daily enlarging volume of business, until a break in Union Pacific on Thursday gave it a set back. The cause of the break lay on the surface. A combination was made some time ago among a number of the smaller operators to bull this stock, but it was not very successful, and the pool has been carrying the load of stock bought until the weight grew too much for comfort. The market was in no condition to permit selling out until this week, and at the first opportunity the Union Pacific people—in the parlance of the street—ran. Thus the very thing happened which was pointed out last week as a danger threatening a bull movement at this time, namely, that some clique would embrace the first chance to unload its holdings, and thereby develop "a weak spot" in the market. It was evident that Union Pacific was being fed out while the bull combination was strengthening prices by its buying and manipulation, because the price of the stock advanced so slowly and with such apparent difficulty; but the worst did not come until the price had reached 104¾, when such a load was shoveled out that the "reformed bears," after a gallant struggle, gave up the attempt to take it. The price receded to 103, and temporarily demoralized the whole market. Yesterday it declined to 102⅝.

Until this unfortunate event happened the market had been rising in the most exhilarating style, but the chief advances were not made by the Vanderbilt stocks, nor by the stocks of those western roads known as "gilt-edged," the solid dividend paying securities of the street. These were comparatively quiet. Indeed, in respect to the Vanderbilt stocks, it was charged that some large holder was feeding them out as fast as the market would take them; and Mr. Vanderbilt was pointed to as the seller. However this may be, it is certain that while making some advance they exhibited no elasticity, though it is evident that if any roads are earning largely at this time it is the trunk lines. They, therefore, according to all usual rules, ought to be the leaders in an advance now. Instead of this, Lake Shore yesterday broke so badly as to give a severe check to the attempt being made to stiffen the market. The stocks which did take the lead were the coal stocks—always great favorites in speculation—and Denver, which fairly astonished the street by the vigor of its advance. The old story of some important combination to be made between the Jersey Central road and some other company was revived, and did good service. The directors of the Jersey company having held a meeting on Wednesday, it was said that the Lehigh Valley company, with whose road Jersey Central connects, had offered to lease it on very favorable terms, and that the meeting was called to consider the proposition. The stock was jumped 3 per cent. on the strength of this, and the Reading road was somehow brought into the rumored combination. The application to discharge the receivership of the latter was made on Thursday; but for three days before it had been said each morning that the application would be made in the afternoon, and this had been used very effectually in bulling the stock. The talk is still strongly bullish on it, and Mr. Vanderbilt has publicly stated that he has 126,000 shares which, he hints, he intends to hold on to because of the great future of the property. In these days Mr. Vanderbilt's utterances are taken by the street with a grain of salt. The record of sales during the days when the coal stocks were most prominent, taken in connection with the prices, might be taken to indicate that the whole movement in them had been skillfully planned to allow some one to get rid of a great deal of Lackawanna stock. The future of the coal trade is now a little cloudy, since production has to be cut down 50 per cent., and doubtless the operators who were loaded heavily with Lackawanna would not be unwilling to lighten their burdens when a favorable opportunity presented. As to Denver, it has been forced up by the sheer courage, or desperation, of the pool in buying all that was offered, and it is said that some thousands of shares have had to be taken which were sold out on foreign account. The story now circulated through Wall street is that the combination, having bought a majority of the stock, intend to turn out President Palmer and his followers, put in their own managers, and carry the stock up to 75 on the strength of it. This "Denver deal" will be as interesting to watch in its outcome as was the well-known Hannibal & St. Joseph "corner," which was so disastrous in its consequences to those who ran it. Apropos of this, it may be noted that the St. Joseph stock is once more showing signs of life. Since the corner it has been dead as a herring until recently, and is now being revived by Mr. Gould in connection with, it is said, a joint lease of the road to the Wabash and the Chicago, Burlington & Quincy companies. There is no surer way to kill a stock than to corner it.

The upward movement and activity of the market this week suggest the natural inquiry as to the position of Mr. Gould and Mr. Keene. The latter has been away at Newport and at Philadelphia most of the week, a suspicious circumstance. When a man so attentive to business as he remains away from Wall street, and the market breaks at once from sluggishness into extreme activity, it is natural to suspect that his absence has a purpose. Doubtless it has in this case. As to Mr. Gould, it is enough to point to the fact that Western Union was allowed to lie almost dormant for two weeks, and this week awoke to extreme activity and a sharp advance in price, to prove that he has had a hand in infusing fresh life into the stock market. Western Union is preëminently the Gould stock; it has his constant care; it is watched over, protected, fostered and used by him to an extent that one may judge pretty accurately what he is doing in the market by the way it acts. It needs all his care. Its enemies are legion, and their last move has been to get the transfers tied up. This is a serious matter. It hits a stock in the weakest spot by hampering negotiations in it, and case and promptness in transfer are absolutely necessary to free trading. With a protector less strong than Mr. Gould a decline in the price of the stock would almost surely have been the consequence. But he prevented a decline and effected an advance instead. It has been surmised by some shrewd observers that the latest attacks on the stock were formidable enough to compel Mr. Gould to turn bull on the general market for the sake of the support Western Union would thereby receive, and to join hands with the bull combination to that end.

The loan market has been as easy as it was last week, the rate for call loans only once having touched 6 per cent., and the average being about 4½ or 5 per cent. But foreign exchange has been on the rise again. One large banking firm raised its posted rates Wednesday afternoon to $4.83 and $4.87, and next morning the other dealers did the same; the actual rates being from 1c. to ½c. below this. There is a scarcity of bills offering against exports, and a sharp demand for exchange by the foreign banking houses who have been selling very largely of American securities on foreign account. It is evident we are getting a pretty steady return flow of our stocks and bonds from abroad. There was a heavy failure on the London market on Thursday. The Bank of England still maintains its rate of 5 per cent. for loans or discounts; though its reserve was raised during the week to 40⅝ from $37^{11}/_{16}$ last week.

Governments are quiet, but there is a pressure to sell the high price bonds to convert them into the new 3 per cents. The following were the closing quotations yesterday:

	Jan. 12, bid.	Jan. 19, bid.	Jan. 19, asked.
U. S. 4s extended (3½ p. c.)	102	102¾	..
U. S. 6's 1891, registered	113½	113⅛	113¼
U. S. coupon	113½	113⅛	113¼
U. S. 4s 1907, registered	110⅜	110⅛	110⅜
U. S. 4s 1907, coupon	119½	119⅛	119⅜

The bank statement of Saturday showed the item of loans to be almost unchanged, reflecting possibly the stagnant state of the stock market, and the large increase in the surplus reserve of $3,233,475, bringing it up to $7,870,700. The following are the comparative totals of the statements of January 6 and January 13:

	January 6.	January 13.	Differences.	
Loans	$317,419,200	$317,891,200	Inc.	$472,000
Specie	62,152,800	62,477,800	Inc.	2,325,000
Legal-tenders	20,204,700	22,372,900	Inc.	2,168,200

COMMERCIAL.

The dispatches to BRADSTREET'S this week from the business centers of the United States report general trade fairly active throughout the west, while dull in the south and east. A better feeling is reported among western dry goods jobbers. Wheat has advanced more or less in all the principal markets of the world during the last week or ten days, the cause being the growing belief that the last year's crops were everywhere overestimated, and that the next summer's crops, though likely to be good in the United States, will inevitably be deficient in Europe. Corn has advanced during the past two weeks on account of the continued low state of the stocks in store, the diminished movement at the west, and the continued large demand at the west for feeding purposes. The advance is to some extent general in all kinds of grain. The iron market at the east reveals no improvement except to a small degree in bar iron at Philadelphia. Prices of pig, it is again stated, have reached bottom figures. Small orders for steel rails have been placed at $41@$42. West and south there is a better feeling among manufacturers of iron. East the general feeling appears to be that no radical improvement can exist until Congress is agreed in its views as to rates of duty and takes action accordingly. Three days per week restriction in coal mining has gone into effect, and will probably be continued for a month or two. Coal is lower on large contracts, and stocks are higher than at the corresponding date in 1882. Petroleum speculative prices are a little lower. This appears to be due to a falling off in the buying interest, caused, in part, by the prolonged delay in the "coming in" of the Patterson and Shannon No. 2 wells, which are believed to be ready to spring on the market. It has been thought that their probable effect has been discounted, but lower prices and a dull market reveals more strength on the bear side than was thought to exist. Ocean freights are generally higher, but there is no business transacting worth mentioning, owing to scarcity of tonnage. A number of petroleum charters arrived during the week and reduced the rates in that line. Their disappearance, however, has restored the old order of high rates and scarcity of vessels. The wool trade has been moderately active and values have been generally well sustained. There were 317 failures in the United States reported last week, 25 less than the preceding week, 107 more than the corresponding week last year, and 147 more than the same week of 1881.

BREADSTUFFS.

The foreign markets for breadstuffs have been slowly but steadily advancing from week to week and almost from day to day. Private cables and letters from the United Kingdom to exporters here in New York express confidence in the continuance of the advance, provided there is no reaction or important decline in American markets.

As the crop year progresses it becomes more and more apparent that the world's surplus of wheat from the crop of 1882, over and above the consumption for the year, was largely overestimated. It will be remembered that the estimates made in September by various European statisticians of the world's excess of wheat over requirements for consumption for the year ranged from 85,000,000 to 180,000,000 bushels. *Beerbohm's London Corn Trade List* of December 29, after reviewing all the facts upon which its own and other previous estimates were based, and with the additional information, reduces its figures to the following tabular statement, viz.:

	Imports required, quarters.	*Probable surplus, quarters.*
United States and Canada	.....	22,000,000
United Kingdom	15,000,000	.....
France	4,000,000	.....
Belgium	1,500,000	.....
Germany	2,000,000	.....
Holland	750,000	.....
Austro-Hungary	.....	3,000,000
Russia and the Danube	.....	7,500,000
Switzerland	1,500,000	.....
Italy	500,000	.....
Spain and Portugal	2,500,000	.....
Australia and Chili	.....	1,000,000
India	.....	3,000,000
West Indies, China, etc	2,250,000	.....
Sundries	.....	400,000
Totals	30,000,000	36,900,000

It will be seen that this estimate reduces the excess to about 55,000,000 bushels. But it is admitted that the estimate of 7,500,000 quarters as the probable exportable surplus of Russia and the Danube is large, and that if at all different is likely to be less than 7,500,000 quarters, while the estimate of 3,000,000 quarters for Austro-Hungary is admitted to be so large as to be out of all proportion to the previous average exports from that country. We may therefore safely assume that the total excess of the world's wheat crop of 1882 was not over 50,000,000 bushels in excess of the requirements for actual consumption during the year to July 1, 1883. But the crop of 1883 will not be distributed, nor even fully harvested, on July 1, 1883. It will require at least the supposed 50,000,000 bushels of surplus to maintain the stocks of wheat in store and furnish food during the harvesting and distribution of the new crop. But even this estimate of a surplus of 50,000,000 bushels is based upon an estimate of a crop of 10,000,000 quarters in the United Kingdom last summer, which it now begins to appear was an overestimate. The estimate of requirements of only 4,000,000 quarters of foreign wheat in France is also open to criticism. The quality of the French crop of wheat last summer is turning out to be very poor; so poor that very considerable quantities of it are put to no other use than feeding to cattle. The imports of foreign wheat into France from August 1 to December 31 were equal to about 22,000,000 bushels. It must be expected that the imports during the next seven months will at least equal the aggregate of the next five, which would make a total of say 45,000,000 bushels for the year, or nearly 50 per cent. more than the estimated requirement of 4,000,000 quarters of foreign wheat. In the four months from September 1 to December 31 Germany imported just about 8,000,000 bushels of foreign wheat. In view of the immense deficiency in the potato crop in that country, it must be expected that the imports during the succeeding four months will be at least at the same rate as during the four months, which would make the total requirements of Germany for foreign wheat equal to 3,000,000 quarters for the year, instead of 2,000,000, as given in the table of estimates. It would appear, therefore, that the strictest estimate of the world's surplus of wheat from the crop of 1882 will not place it much above 3,000,000 quarters, or say 25,000,000 bushels.

It also seems now reasonably certain that the next crop of wheat throughout western Europe and the United Kingdom will be very much less than last year. In France the estimated deficiency will be from 32,000,000 to 38,000,000 bushels, in Germany nearly 20,000,000 bushels, and in the United Kingdom at least 24,000,000, making an aggregate decrease in these three countries alone of from 76,000,000 to 82,000,000 bushels below the crop of 1882. The conclusion, therefore, seems unavoidable that the surplus supply of wheat, as compared with the requirements of the principal importing countries, will steadily diminish throughout the remainder of this and also the greater portion of the next crop year.

AMERICAN WHEAT MARKETS.

During the week wheat for all options has advanced about 1½c. per bushel in the New York market and about 3c. in Chicago. In the latter market the advance has been greater than in either New York or Liverpool. There is a speculative movement in progress in the Chicago market which has advanced the January option from 93½c. on January 2 to $1.01 on January 18. May options have advanced 8c. per bushel in the same time. The speculation in Chicago has been stimulated by the fact that during the last two weeks the purchases of flour in that market for European account have exceeded anything of the kind for a year or two. The speculation in Chicago is, however, not of the usual clique character, but rather of a general movement of that class of speculative capital to invest in the wheat and trust to the progress of events in Europe to put up the price without any manipulation. The receipts of wheat at the principal western points show a very large decrease in the last three weeks. The total arrivals at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria in the week to January 12 being 711,376 bushels, against 925,678 bushels in the week to January 5, and 1,229,827 in the week to December 27. As remarked in several previous issues of this paper, the increased movement of flour this year is to some extent a cause for a diminished movement of wheat, but in the present instance of decrease since the beginning of the year the decrease applies to the entire movement of both wheat and flour at the west. Heavy snows and blockades of the railways have had some effect to diminish the arrivals; but, aside from this, there is evidently a disposition on the part of farmers to hold on to their grain for higher prices.

From San Francisco, Cal.: The produce and grain exchanges agree in estimating wheat and flour in warehouse and afloat, January 1, in California, about 443,000 tons. Home consumption will absorb 90,000 tons before the new crop comes in, consequent upon increased demand for flour at Pacific ports. Not exceeding 250,000 tons of wheat available for European market. The wheat situation in California for the next crop is invariably favorable; a largely increased area has been seeded. In Oregon, not exceeding four cargoes of wheat is available before new crop comes in. Farmers of east Oregon are buying seed wheat in Portland. Prices of wheat and flour are strong, with rising market. Sales of No. 1 white, February delivery, at $1.84¾ per cental.

The statement of the visible supply of wheat in the United States and Canada on January 13, as compared with the preceding week, shows an increase of 73,219 bushels.

Our Louisville correspondent under date January 17, writes as follows: The grain trade in this city is reported to be unusually dull for this season of the year. Heretofore our grain dealers have purchased liberally in Indiana, Illinois and other western states, and found a ready market in the south. Owing to the largely increased acreage and the successful crops of grain raised in the southern states last year that section now needs but slight importations of cereals, and the absence of a demand from that quarter, together with the stagnation in distillery operations in this vicinity, has materially curtailed the grain movement at this point. Corn is coming in slowly from the surrounding country, holders being unwilling to take current prices. The same is true of wheat, the receipts of which continue very light, and are hardly sufficient to supply the requirements of the local millers. The growing stand of winter wheat in this neighborhood is reported to be looking poorly, owing to the rank growth encouraged by the warm autumn and the lack of snow protection so far this winter. The prosperous condition of the farmers seems to have strengthened their disposition to hold back their grain, and the effect of their withholding shipments appears in the gradual stiffening of prices. The demand for wheat is liberal and offerings small; No. 2 at 96@98c. Corn is scarce and advancing; mixed ear 47c., and shelled at 48@50c., on arrival. Rye steady at 65c. for northern and 60c. for Kentucky. Oats firm at 37@38c. for Kentucky and 42c. for northern white. Mill offal firm and active; bran $13, shipstuffs $17.50 per ton delivered. It is estimated that 25 per cent. of the grain crop in the neighboring states is still in producers' hands.

CORN.

Corn has advanced about 1½c. to 2c. per bushel in the New York market in the last week. In Chicago, where speculation has taken hold of it, the advance in January corn has been 8c. per bushel in the last week, and since the beginning of the year 16c. All the more deferred options have also advanced to some extent, and May corn, which was 53c. in Chicago on January 2, was 57c. on January 18. The stock of corn in Chicago—or anywhere else—is very small yet as compared to previous years. The total of all grades in Chicago on January 13 was 2,828,000 bushels (of which only 1,830,000 was No. 2), against 5,328,000 at the corresponding date last year and 4,706,000 two years ago, while throughout the east the markets are comparatively bare of corn. It will thus be seen that, notwithstanding the government official estimate of a crop of 1,624,917,800 bushels of corn in 1882, against a crop of 1,194,916,000 bushels in 1881, the stocks in store continue at only about half what they were last year, and prices of corn are higher than they have been in any month of January since 1875. The receipts of corn at the west have decreased largely since the holidays, the total arrivals at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria in the week to January 12, being 1,413,568 bushels, against 1,831,079 in the week to January 5, and 2,389,875 in the week to December 27. This decrease of arrivals cannot, as in the case of wheat, be attributed to heavy snows obstructing railway traffic, because the corn comes from sections in which the railways have not experienced any serious obtructions from snow. The explanation seems to lie partly in the fact that more corn than usual is being used in the country for feeding, and also that the supplies in Illinois and Iowa are smaller than in previous years.

The statement of the visible supply of corn in the United States on January 13, as compared with the preceding week, shows an increase of 199,366 bushels.

PROVISIONS.

Provisions have declined slightly (15 to 20c. per barrel on pork), but, on the whole, have remained pretty steady, and are now at just about the prices of ten days ago, though, as compared with the beginning of the year, pork is 40c. per barrel higher, and lard from 30c. to 40c. per 100 pounds higher. As mentioned in our article of last week (in which a full statement of the statistical position was given), the small stocks of provisions everywhere throughout the United States maintain prices, and every time there is a decline it brings out plenty of buyers.

Our Chicago correspondent, writing under date of January 16, says: Notwithstanding the continued liberal receipts of hogs, and the disposition in some quarters to hammer provisions, the market shows more than customary resistance to the efforts of the bears to depress prices. The strength is attributed to rumors that a few strong houses, like Armour & Co., B. T. Hutchinson, and B. F. Murphy, have recently expressed great confidence that the rapidity with which stocks are going into consumption in connection with the further fact that supplies, both at manufacturing and distributing points, are lighter than at any corresponding period in several years past, must soon result in a large advance. It is also noticeable that brokers in the export trade, and foreign houses who pack here, are unreserved in their expressions of confidence that prices will rule higher in the near future. But so long as the arrivals of hogs continue liberal, as at present, the bears will be disposed to fight every advance, and, as they include a good many strong operators among their number, they are likely to worry the bulls severely until the question regarding the supply of hogs for the balance of the winter and early spring months is more definitely settled. As a matter of reference, it may be well to state that the receipts of hogs during this and the succeeding two months in 1881 and 1882 were as follows:

	1882.	1881.
January	751,732	766,735
February	417,009	338,432
March	380,055	308,795

Even at the present liberal rate of receipts it scarcely seems likely that the arrivals this month will equal, or at least will not exceed, those of the same periods in the two preceding years. It is likewise claimed that the present high prices of hogs are calling out everything fit for market, and that the rush will not continue beyond a week or the close of the month at furtherest.

THE PROVISION MARKETS BY TELEGRAPH.

From Portland, Me.: Provision market dull and drooping.

From Cincinnati, Ohio: The tone of the provision market is stronger, with good consumptive demand.

From Chicago, Ill.: Pork quiet, and is held with fair confidence. There is not much disposition to buy, while hogs are arriving freely. Export and speculative demand for lard steady. Meats steady, there being a fair demand for shipment. Hogs dull; receipts 37,000 head; past five days 197,000 head.

From St. Louis, Mo.: Provisions have been excited, but the tone is now easier although unsettled. Hog market very lively; receipts large and sell at once; packing is in steady progress. Cattle are in better demand and advancing, with small supplies.

From Memphis, Tenn.: Meats steady. In live stock the market is active, with steady prices.

From Nashville, Tenn.: Provisions firm; demand fair. Cattle receipts moderate; dmaend very good.

THE NEW YORK DRY GOODS MARKET.

During the past week the New York dry goods market has seen a large increase of buyers from the west and southwest, but trade has not opened up yet to any extent. They are looking around more than buying, though staples are meeting with some selection and there is a constant increasing demand

though of a moderate nature. Jobbers are doing very little, though no less than usual for the season.

Retailers are busy reducing and getting into stock-taking shape. The importations and marketings for the week are as follows:

	No. of packages.	Value.
Total imports of dry goods during past week	5,154	$1,737,279
Total amount of dry goods, duty paid, for past week	7,465	2,153,041

THE BRITISH COTTON GOODS MARKET.

[By Cable to BRADSTREET'S.]

London, January 18.—Manchester cotton goods quiet. There is some inquiry from China trade. Spinners keep yarns fairly active.

THE DRY GOODS MARKETS BY TELEGRAPH.

From Portland, Me.: Values for dry goods rule steady.

From Boston, Mass.: The dry goods trade has been moderately fair, which is about all that is expected between seasons, but all are preparing for and expecting a good business when trade opens. Reports from retailers throughout the country indicate that their stocks are light. The woolen trade is a little better. The weather has been very favorable for the retail clothiers.

From Providence, R. I.: The print cloth market is dull, with good demand at the quotations; the amount of sales is small; 64s are quoted at 3⅝c., and 56x60s at 3⅛c.; there are about 170,000 pieces on hand. The cotton market is quiet and steady, the amount of sales being small; middling uplands are worth 10½c. and middling gulfs 10¾c.; there are about 5,000 bales on hand.

From Philadelphia, Pa.: There is more doing in package lines, and a better feeling pervades the market. Jobbers are beginning to anticipate spring requirements. The distributing trade is quiet, but up to expectations for the time of year. Values are steady on best makes of cotton and woolen goods, but have declined slightly on some low grades of colored cottons.

From Pittsburgh, Pa.: The dry goods trade continues dull, but not more so than is usual at this season of the year, and jobbers are satisfied with the situation. Collections are reported fairly satisfactory.

From Cleveland, Ohio: The dry goods market is quiet, but satisfactory for the season.

From Cincinnati, Ohio: Dry goods and woolens show little activity; however, prices are maintained.

From Columbus, Ohio: The dry goods trade is about the same as last week, but dealers report an increase over last year.

From Dayton, O.: The dry goods trade has been dull.

From Indianapolis, Ind.: The dry goods trade is fair, but not rushing. Evansville reports no new features in the dry goods trade, which is fair; collections continue fairly satisfactory.

From Chicago, Ill.: Orders for heavy woolen and other staple dry goods slightly improving, but trade materially interrupted by cold weather and snowstorms during the week.

From Peoria, Ill.: The dry goods trade is steady and improving.

From Louisville, Ky.: The dry goods trade has been seasonably quiet.

From St. Louis, Mo.: The dry goods trade continues more active than usual during January, and values are steady.

From Burlington, Iowa: The dry goods trade is looking upward and improving. Collections fair to good.

From Milwaukee, Wis.: Dry goods jobbers have hardly commenced any heavy shipments, but have most of their travelers out, anticipating rather an early spring trade. The volume of business in this line has not been fully up to the aggregate of corresponding time last year.

From San Francisco, Cal.: Dry goods dull, the transactions being only to meet immediate needs.

From Baltimore, Md.: The dry goods market the past week has been inactive and jobbers are now anxiously awaiting the opening of the spring trade. Dealers say that the volume of business at this time does not compare favorably with last year at same date, but are hopeful of receiving orders in the near future from salesmen who are now on the road. Commission houses have been doing some little business, and no complaints are heard from them.

From Richmond, Va.: The dry goods trade has been dull, but merchants consider the prospects for spring trade good.

From Norfolk, Va.: Dry goods jobbers are now receiving their spring stock. The prospect for a large spring business is not very good.

From Wilmington, N. C.: The dry goods jobbing and retail trade reported dull.

From Savannah, Ga.: In dry goods there is little doing among jobbers, but the retail trade is keeping up fairly.

From Galveston, Tex.: The weather has been cloudy for the past few days, with considerable rain. The dry goods trade is only fair.

From Houston, Tex.: Jobbers reports light falling off in dry goods trade.

From Memphis, Tenn.: In dry goods dealers report not much, if any, improvement in the volume of shipments this week.

From Nashville, Tenn.: The dry goods trade has been quiet, it being too early in the season to develop any marked activity.

COTTON.

The total receipts of cotton at the ports since September 1 are 4,017,424 bales, against 3,547,070 bales for the same time last year. The receipts at the ports for the week are 148,752 bales, against 172,202 bales last week and 95,018 bales for the corresponding week last year. The receipts at the twenty-four interior towns usually reported for the week are 52,127 bales, against 46,701 bales last week and 23,916 bales for the corresponding week last year. The shipments for the week were 63,083 bales, against 62,709 bales last week and 39,796 bales for the corresponding week last year. The stocks for the week were 336,827 bales, against 341,740 bales last week and 386,112 bales for the corresponding week last year. The New York cotton market has been lower for spot middling uplands, and the price has declined to 10⅛c. The future market has declined an average of 11 points for near months and 14 points for later months. Below will be found the closing quotations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	Last week.	Last year.
Ordinary	7 9-16c.	7½c.	9 5-16c.
Strict ordinary	7⅞	7 15-16	9⅞
Good ordinary	8 11-16	8¾	10 11-16
Low middling	9⅝	9 11-16	11 9-16
Middling	10⅛	10 3-16	12
Good middling	10 7-16	10	12⅜
Middling fair	11 3-16	11¼	13⅛
Fair	11 15-16	12	13⅞

The New York spot market closed quiet.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	Last week.	Last year.
January	9 99c.	10.08c.	12 04c.
February	10 01	10.12	12.11
March	10.14	10.26	12.36
April	10.27	10.40	12.55
May	10.39	10.54	12.72
June	10.54	10.68	12.85
July	10.67	10.80	12.96
August	10.78	10.91	13.06

The New York future market closed steady,

The Liverpool market for spot cotton has declined for middling uplands to 5⅝d. and for middling Orleans to 5¾d.

The sales of American cotton at Liverpool for the week were 47,500 bales, the stock in port 191,000 bales and the amount afloat 290,000 bales.

The Manchester market is reported easier.

COTTON REPORTS BY TELEGRAPH.

From Wilmington, N. C.: Weather temperate, with daily rains. Cotton receipts continue light, with an active demand at full prices.

From Helena, Ark.: Four days' favorable weather for gathering. Cotton falling on ground rapidly.

WOOL.

The seaboard wool markets have exhibited a fair degree of activity during the past week, and the tone of the market is steadier all around. The prevalent feeling seems to be that wool is not dear at present prices, and, while there is no indication of any immediate advance, buyers are taking hold with more confidence. Consumptive requirements are increasing now that the mills are generally at work on heavy goods, and the outlook is favorable for a steady healthy trade for some weeks to come. Purchases are mostly for well-assured wants, and the market is remarkably free from speculative influences or excitement. Stocks are under good control in eastern markets, and it is believed that all available supplies on the seaboard and in the interior will be wanted before the new clip is ready for sale. The relative position of home and foreign markets offers little encouragement to importers. Desirable fine-clothing fleeces are more firmly held, but not quotably higher. Staple wools of all grades are in active demand and generally well sold up, as the worsted spinners in most cases hold orders ahead of production.

IRON.

Throughout the west, expressions are heard of a slightly improved outlook in the iron market. This, at various points, is due to a somewhat improvep demand from the furnaces and mills, and at other places to renewed inquiry and a manifestation on the part of buyers of an intent to make purchases at an early date. The same or like conditions are reported from southern iron centers. At eastern cities, however, there is no visible improvement. There has been a slightly increased demand for bar iron, but no special indication of gaining strength has been manifested in other lines. Stocks of bar iron at Philadelphia, and to a lesser extent at Pittsburgh, are lower than they have been for some time past, and several orders for considerable lots have of late been received. American pig iron is quiet and dull, with almost nothing doing. For the second time producers announce that they are convinced that prices have touched bottom, "at least for the present." Prices at New York for No. 1 are $24@$25.50, and at Philadelphia $1@$1.50 lower per ton, No. 2 bringing $22@$23 at New York. Scotch pig iron arrivals at New York during the week have amounted to about 1,500 or 1,700 tons, and sales, mostly to arrive, have been 500 or 600 tons. Most of that which arrived went into store. Prices of Scotch are off about $2 per ton from those quoted a month ago, in the main due to low freights, as the market abroad is well sustained. Coltness is now quoted at about $25.50@$26, against $27@$28 in the early part of December. The market for foreign pig iron is dull and very quiet. Plate, tank and finished shapes are very dull, almost no inquiries being made, and no sales of moment. A few small orders for steel rails have been placed at $41@$42, but large orders would be accepted at $40. The intimation made in these columns last week, that the meeting of eastern pig iron manufacturers, held in New York, January 5, took action on subjects of far more public import than was permitted the reporters of the daily papers to learn, now appears to be a fact. Instead of taking steps to organize, and resolving to in general protect the interests of members, as several present distinctly stated, it now transpires that a committee was appointed to go to Washington to urge a higher rate of duty on pig iron—$8 per ton.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, January 18.—There is no sign of an improvement in the iron trade. As the new year progresses further slight concessions are made by weak holders. The Caledonian railway strike hampers Scotch trade to a great extent.

DOMESTIC IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: General trade continues dull, but furnaces and mills are producing as usual, and the outlook is generally regarded as favorable, as consumption is heavy and demand is likely to be stimulated by the low prices. Concerning tariff legislation the feeling is gaining ground that nothing definite will be effected until next winter.

From Pittsburgh, Pa.: The bar iron market is dull, and few orders are coming in. Manufacturers believe that the present stagnation will end when action is taken on the tariff question, and a good year for business is anticipated. Pittsburgh iron, in sympathy with bar, is lifeless. Nails are only in fair demand.

From Cleveland, Ohio: The demand for pig iron is better than during the previous week. All grades of iron are in better demand, but on a lower basis than prevailed during the fall months. Charcoal iron is in better demand than usual at this time of year. This is especially true with respect to the demand for car-wheel irons.

From Cincinnati, Ohio: Demand for pig iron quiet, and, notwithstanding the reduction of product, there appears to be sufficient for all wants. Manufactured iron quiet, and prices unchanged.

From Chicago, Ill.: Building and general hardware selling better on orders; unchanged. Refined iron in but fair demand. Nails in fair request and steady, with more call for job lots. Pig iron and and steel rails in light request.

From St. Louis, Mo.: Business in the iron trade is improving, and sales are heavy. Prices are unchanged, but sellers are very firm, and make no concessions.

COAL.

The presidents of the several companies engaged in mining anthracite coal in Pennsylvania arranged on Saturday last to discontinue operations at the mines on the 18th, 19th and 20th of the present week, and on the corresponding days of each succeeding week until otherwise agreed on. This decision had been foreshadowed in BRADSTREET'S, and was arrived at in order to infuse more life into the coal market by keeping down stocks, which have exhibited a tendency of late to increase. The restrictive policy in production, as announced, will be adhered to, "perhaps until April—possibly not longer than March." This course, without doubt, means half pay as well as half time for the miner, which has inspired several journals to express pity for the unfortunate employé, who is thus obliged to sacrifice half his income for two or more months, in order to stiffen the market for his employers. One journal ingeniously replies to this by stating that miners' wages are based on prices obtained for coal, leaving the inference open that the miner is to be a gainer by losing half his weekly income through an ultimate advance, based on the higher prices to be obtained. But those who have been pitying the miners will be gratified to have a further elucidation of this interesting point. The present prices for coal are considerably below circular rates. The large companies have found business rather dull of late, as may be supposed by their action referred to above. Several individuals and firms, operators and dealers, have, however, enjoyed a fairly active trade. The latest figures which have come to hand as to the official report on the production of anthracite coal in Pennsylvania show a total of 29,120,096 tons. Of this quantity 7,000,113 tons were shipped by the Philadelphia & Reading Company, 5,933,740 tons by the Lehigh Valley, 4,211,052 tons by the Central Railroad of New Jersey, 4,638,717 tons by the Delaware, Lackawanna & Western, 3,203,168 tons by the Delaware & Hudson, 2,332,974 tons by the Pennsylvania Railroad, 1,469,821 tons by the Pennsylvania Coal Company, and 330,511 tons by the New York, Lake Erie & Western. The stock of coal on hand at tide-water shipping points December 31, 1882, was 562,116 tons, against 497,024 tons December 31, 1881. Of the total production of the year the Wyoming region contributed 13,971,371 tons, or 47.98 per cent.; the Lehigh region 5,689,437 tons, or 19.54 per cent., and the Schuylkill region 9,459,288 tons, or 32.48 per cent. Some points of interest in reference to the production of anthracite and bituminous coals in the United States, the growth of the same, and the increasing use of the latter variety, will be found in the editorial columns.

PETROLEUM.

On Saturday last business on the oil exchanges was light. The only news of importance was the continued decline of the various Forest county wildcat wells which have come in during the past two or three months. The opening price was 89¾c., ¾c. below the figure bid at the close on the day preceding. The lowest price of the day was 89c., and the highest 90c. bid, as on Friday evening. Monday's oil market was quiet, although prices exhibited a more marked tendency to advance: The opening figure was 90½c., the highest was 91⅝c.; the lowest was the opening price, and the close was made at 91½@91⅝c. On Tuesday trading was much more spirited. Word was received that the Patterson well and Shannon No. 2, less than a mile west of south of the Schultz well, had each reached sand, and were to be "expected in" at any moment. The start in speculation for the day was made at 91⅞c.; the highest was 92⅛c., the lowest 91¼c., and the close witnessed 91⅞@92c., an advance of ⅜c. from the close the evening before. No changes of special import were noted on Wednesday, and the day's trading at the various petroleum exchanges was not large. Nothing was heard from the Patterson and Shannon wells, although there was little reason to doubt that the owners of those wells were at that time, and had for several days been, aware of their probable capacities. The Reno well was said to have recovered a few barrels per day of its waning production, owing to having been put down a little deeper. The opening figure was made at 91⅞c., from which they went down to 91½c., up to 92c., and closed at 91¼@91⅜c. On Thursday none of the news for which the market had been waiting came to hand, and the day passed into the list of those which are commonplace. The only feature worthy of note was a drop of ½c. just prior to the close. Prices opened at 91¼c. bid; the highest was 91¾c., and the lowest was at the close, 89¾c. bid.

The market on Friday was dull and the bulls, strange to say, were strikingly apathetic. Few offers of importance to buy were made and prices drooped. Opening at 89¾c. by 1.40 P. M., quotations were made at 88¾c. bid. The Patterson and Shannon No. 2 wells had not come in at that hour. The general impression was that the former will do 400 or 500 barrels daily. The long suspense appeared to have dampened the spirits of those favoring higher prices, and the consequence was as noted. At the close the quotation was 89¾c., against 90c. bid on Friday, January 12, a decrease of ¼c. on the week.

Throughout the week down to Thursday evening the market for refined oil continued weak, with little export demand, but firmly held at figures last reported. Crude was stronger, but with no change in

quotations. The closing prices of petroleum and petroleum products at New York last evening, as compared with those one week ago, were as follows:

	January 12.	*January 19*
United pipe-line certificates.....	90 bid.	89¾@89½
Refined oil, 110° test.....	7½	7½
Refined oil, 70° Abel test.....	7⅞	7⅞
Case oil, plain brands.....	10¼	10¼
Crude, in barrels, New York.....	6⅞@ 7⅜	6⅞@ 7⅜
Naphtha, per gallon.....	6¾	6¾

The total exports of petroleum from the United States for the week ended January 13 was 9,639,427 gallons (crude equivalent), against 6,099,349 gallons in the preceding week. From January 1 to 13 the total exports amounted to 15,738,776 gallons, against 18,978,605 gallons in the first two weeks of 1882, a decrease this year of 3,239,829 gallons. Out of the total of 9,639,427 gallons shipped abroad during the week ended January 13, 9,132,567 gallons were from the port of New York, leaving but 506,860 gallons as the aggregate shipments of other ports. New York has sent abroad since January 1 (to 13) 14,529,588 gallons, against 14,965,585 gallons in the first two weeks of 1882, a net decrease at New York of but 435,997 gallons.

OCEAN FREIGHTS.

The week's business in the ocean freights market closes where it begun, with a small supply of tonnage—barely enough berth room to meet the existing demand, rates firmly held, in most instances at an advance, and the market very dull, with almost no business doing. The quiet which reigned on Saturday last was offset by prospective arrivals of petroleum tonnage, and rates, therefore, broke to figures which were deemed reasonable from the exporter's point of view. Tuesday witnessed the arrival of several such vessels, and a number of charters were made. The outcome, however, was another shortage in the supply, and firmer and higher rates, with almost nothing doing. The advance in the price of wheat has reacted on the export movement of that commodity, and its shipment abroad has been checked. From other Atlantic ports like reports are made as to scarcity of tonnage, high rates and restricted shipments. Rates for berth freight are firm, and the supply continues as referred to above. Recent mail advices from India state that the freights market there has sustained a marked advance, owing to the high rates and demand for tonnage from America.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: Business in all lines continues rather quiet. For groceries values rule steady. All farm products are strong and buoyant. Drouth continues to restrict lumbering operations.

From Boston, Mass.: There is more activity in the boot and shoe trade. There are about fifty buyers in town, and in a few weeks they will be largely reinforced, when a good trade is looked for. Shipments for the week to places outside of New England, 42,167 cases, against 39,988 cases the third week in 1882. Total shipments since January 1, 116,472 cases, against 100,191 cases corresponding time last year.

MIDDLE STATES.

From Philadelphia, Pa.: No general activity has been observable in wholesale trade circles during the past week, but a fair trade has been done in some departments, and the condition of business on the whole compares favorably with this time last year. The industrial situation is unchanged. The textile interest continues in a depressed condition, and production is kept at a minimum; but, as the goods trade is improving, manufacturers regard the outlook more hopefully. Few important price changes have occurred in the merchandise markets. Supplies of farm products continue liberal, and in most cases values favor buyers. Flour is decidedly more active and very firm at a slight advance. The grains are higher, but not active. Shippers have few orders at current rates, and speculation is halting in apparent uncertainty as to the future of prices. The strength of corn is largely due to the advance in Chicago, where the January option is under manipulation. The Commercial Exchange has been temporarily enjoined from suspending a member who refused to settle a December corn contract at a "corner" price, which was approved by the call-board committee. The case will be finally argued before Judge Mitchell, in the Court of Common Pleas, on Saturday. Provisions are jobbing freely at firm prices. Petroleum is dull for export. Vessels for both grain and oil shipment are scarce

From Pittsburgh, Pa.: The jobbing trade generally is very quiet, though no general complaint is heard, and collections are very fair.

WESTERN STATES.

From Cincinnati, Ohio: Grain and flour have taken an impetus, and close strong, with an advance. Cotton has sold well, and the volume of trade is larger than last week. Jobbing and manufacturing trades are still quiet, and manifest lethargy and some anxiety. Collections unsatisfactory, not a few country houses asking longer time on maturing purchases.

From Cleveland, Ohio: The general jobbing trade presents no change from last week, and little change is anticipated during the present month. The volume of business compares favorably with that of a year ago. There is some little improvement in country collections over those of last week.

From Columbus, Ohio: Although now, as is always the case between seasons, trade is a little quiet, collections have improved some. Buggy manufacturers are just commencing again on spring trade, but business is still dull.

From Dayton, Ohio: General trade quiet.

From Chicago, Ill.: Wheat is in active speculative demand, mainly for country orders; advance since opening of month 10c; no shipping inquiry for No. 2. Corn firm; highest point of month; feeling feverish; present light receipts largely due to storm and stoppage of trains. Flour active; large export orders; stocks moderate. Heavy boots, shoes and rubber goods more active. Drugs and chemicals selling fairly. Lumber weak and irregular. Coal in active demand for domestic consumption; manufacturers taking but little. Groceries more active. Sugars scarce.

From Peoria, Ill.: There is a slight increase in trade over the past three weeks, and general trade is fair for between seasons.

From Evansville, Ind.: Grocerymen report rather a dull trade in their line since the holidays, owing to past obstruction of navigation by ice in the river and bad weather. Trade during the past week has greatly improved. Country roads are said to be in a bad condition, and in consequence the retail trade is only fair. Collections continue to be satisfactory.

From Indianapolis, Ind.: General trade is quiet and appears to be improving, but collections are still slow.

From Louisville, Ky.: Trade matters continue quiet and steady. Groceries in good average demand. Provisions are slow, but firm. Produce active. Clothing seasonably quiet. The manufactured tobacco and whisky trades remain stagnant, pending congressional action; sales confined to staple grades for immediate use. Leaf tobacco is fairly active, with burleys easier and dark types steady; receipts moderate, but rather favorable for an increase.

From St. Louis, Mo.: Flour is in good demand and firm. Wheat has been dull and unsettled, but is sharply higher now and active; receipts are light. Corn has been buoyant, and still tends upward. Oats are in small supply, and advancing. Hay market greatly overloaded, and very quiet. Very little doing in cotton beyond a tolerable shipping movement; interest is calling for considerable money to carry heavy stocks. General trade is moderately heavy. Jobbers have salesmen on the road again. The most active inquiry comes from the southwest.

From Burlington, Iowa: Retail trade quiet, but persistent, with jobbers actively soliciting business and anticipating a good spring trade. Orders, as yet, run large.

From Milwaukee, Wis.: Banks are doing well; money is in fair demand; shipments of money to the interior have not been as large this week as for the previous ten days. The trade of the week in retail lines has been much retarded by the excitement incident to the Newhall House calamity, coupled with the heavy snowstorms and inclement weather. Jobbers have hardly commenced any heavy shipments, but have most of their travelers out, anticipating rather an early spring trade. Especially is this apparent with the clothing and boot and shoe houses. The volume of business in these lines has been fully up to the aggregate of the corresponding time last year. The condition of collections is reported as unchanged.

CALIFORNIA.

From San Francisco, Cal.: General trade has been slow.

SOUTHERN STATES.

From Baltimore, Md.: General trade continued very dull the past week, and the prospects, for some time to come, are not very encouraging. The weather has been very unsettled, and many dealers from near-by localities who usually do their buying about this time are holding off. The grain market has been fairly active, but the cause for this improvement is not very apparent, as shippers are buying rather cautiously. Southern corn is scarce and wanted, and western is bringing better prices. The cotton market is dull but steady, and late sales were on a basis of 9⅞c. The inquiry for grain charters is moderate, and the market is quiet but firm in tone, with only a limited offering of tonnage.

From Norfolk, Va.: The continued bad weather makes it dull in all departments of trade. Collections are very moderate. The receipts of cotton have somewhat increased. Peanuts come in slowly; market advancing; the Virginia crop is much smaller than was anticipated.

From Richmond, Va.: The weather still unsettled, and business in all lines dull.

From Wilmington, N. C.: Spirits turpentine is quiet. Rosins firm. Tar steady. Crude turpentine wanted. Provisions, grain and breadstuffs advancing. Timber firm. Lumber and shingles steady. Freights dull.

From Savannah, Ga.: The weather has been stormy for the whole week, with heavy rainfall. Trade is generally quiet, with collections coming in slowly. On Tuesday the first shipment of grain direct to Liverpool was made. The new elevator belonging to the Central Railroad was used for the first time. This was the first shipment of southern grain made from a south Atlantic port to Europe direct.

From Columbus, Miss.: Weather bad and trade dull. Cotton receipts light for the past week.

From Houston, Tex.: All lines of trade reported fairly active.

From Memphis, Tenn.: Not much improvement to note in general trade this week, as business in all lines continues quiet. Flour still steady, with a fair demand. Cornmeal in better demand, with prices firmer. Corn in plentiful supply. Demand for country produce fair.

From Nashville, Tenn.: The general trade of the week shows some improvement over last week, notwithstanding the unfavorable weather and bad condition of country roads. Flour firm and higher, with a good demand. Wheat is advancing. Corn steady, higher and in good demand. Country produce steady.

The following table, giving rates on prime commercial paper and exchange on New York at the cities named, is based on special dispatches to BRADSTREET'S, received yesterday:

	Prime com. paper, per cent.	*Exchange selling on New York.*
Atlanta, Ga.....	8 @10	¼ premium.

TRADE EMBARRASSMENTS.

There were 317 failures in the United States reported to BRADSTREET'S during the past week, 25 less than the preceding week, 107 more than the corresponding week in 1882, and 147 more than the same week in 1881. The bulk of the failures continue to be those of small traders. The principal failures were C. Conrad & Co., wholesales wines and liquors, St. Louis; Hall & Baldwin, hat manufacturers, Yonkers, N. Y., and Carrington & Baskerville, commission tobacco and grain, Richmond, Va. The middle states had 67, a decrease of 22; New England states 39, an increase of 9; southern states 69, a decrease of 49; western states 109, an increase of 16; Pacific states and territories 33, an increase of 11; Canada and the provinces 25, an increase of 6. In the principal trades the failures were as follows: General traders 63; grocers 50; clothing 21; shoes 20; liquors 19; dry goods 19; hotels and restaurants 14; fancy goods 11; hardware 11; jewelry 11; drugs 8; tobacco and cigars 8; produce and provisions 7; manufacturers 6; furniture 5; books and stationery 5; bakers and confectioners 4; gents' furnishing goods 4; hats 4; millinery 4; grain 3; commission 3; crockery 3.

ALABAMA.

EUFAULA.—E. F. Davis, general store, has failed. Liabilities about $9,000; preferred claims $5,000. He offers 30 cents.

DAYTON.—O. Brame, general store, has failed.

PRAIRIE BLUFF.—Davidson & Brother, general store, have assigned.

TROY.—J. B. Knox, general store, is offering to compromise.

CALIFORNIA.

ALAMEDA.—J. J Doyle, harness, has been attached.

ARCATA.—W. Y. Fickle & Son, shingle mill, have filed a petition in insolvency.

BENICIA.—E. Gallagner, shoes, has been attached.

HANFORD.—E. J. Plummer, varieties, who was recently burnt out, has been attached.

HANFORD.—W. A. Simmons, drugs, who was recently burnt out, has been attached.

LOS ANGELES.—Bishop, Wolfrom & Co, saddlers, have been attached.

MARYSVILLE.—E. C. Ross & Co., stoves, etc., have compromised at 50 cents. Liabilities $17,000; assets $10,000.

MARYSVILLE.—George Wappel, hotel, has been attached.

OAKLAND.—W. A. Hughes, saloon, has been attached.

OAKLAND.—A. C. McLellan, hotel, has filed a petition in insolvency.

SAN DIEGO.—J. B. Levert, carpenter and builder, has filed a petition in insolvency.

SAN DIEGO.—P. E. Segert, jeweler, has been attached.

SAN FRANCISCO.—G. Baum, furniture, is advertised to be sold out by the sheriff.

SAN FRANCISCO.—George Dettner, restaurant, has been attached.

SAN FRANCISCO.—M. Lachman & Co., carpets, have assigned, and application has been made to force them into insolvency. A conveyance of realty dated June 13, 1877, has just been recorded.

SAN FRANCISCO.—Jaciel Meyers, tailors' trimmings, has assigned to Louis Levy.

SAN FRANCISCO.—Waas Brothers, Teutonia Garden, are advertised to be sold out by the sheriff.

SAN JOSE.—B. L. Ryder, grocer, has filed a petition in insolvency.

SAN JOSE.—O. A. Zingg, fruits and confectionery, has filed a petition in insolvency. Liabilities $1,030; assets $643.

SANTA ANA.—E. E. Duncannon, general store, has been attached.

SONORA.—H. Jacobs, general store, has been attached.

SONORA.—P. E Segert, jeweler, has been attached for $1,081.

WILMINGTON.—W. Frankel & Co., general store, have assigned.

COLORADO.

CRESTED BUTTE.—A. C. Cramer, grocer, has failed.

DENVER.—Julius Scherach, hotel, has been attached for $501.

LARAMIE CITY.—H. N. Pickel, market, has been closed on attachment and sold out.

LEADVILLE.—The European Hotel has been closed, and Mr. Woodward, the proprictor, is reported to have left town, owing many creditors.

PUEBLO.—Julius Kessler, wholesale liquors, who recently left town, has been attached for $1,000.

SALIDA.—H. C. Corey, saloon, has been closed on attachment.

SOUTH PUEBLO.—Charles Neugebauer, jeweler, has assigned to F. H. Shrock. Liabilities $12,000; assets $8,000.

CONNECTICUT.

BRISTOL.—Titus E. Merriman, grocer, has assigned.

NEW HAVEN.—P. F. J. Schneider, toys, is offering to compromise.

THOMASTON.—William T. Davey, shoes, has assigned.

DAKOTA.

WHITE LAKE.—Oppel & Robinson, general store, have assigned. Liabilities $13,000.

DELAWARE.

DOVER.—Execution has been issued against W. H. Roberts, shoes, on judgments for over $1,500.

WILMINGTON.—Jackson & Franklin, teas, have been sold out by the sheriff.

DISTRICT OF COLUMBIA.

WASHINGTON.—J. J. Chapman, books and stationery, has been closed by the sheriff, and is advertised to be sold out on the 23d inst.

FLORIDA.

MAITLAND.—Mrs. Isaac Vanderpool, general store, has been attached.

GEORGIA.

ALBANY.—Hester & Bush, general store, are offering to compromise at 50 cents.

ALBANY.—H. Tison, general store, has failed and been attached.

ARLINGTON.—Muse & Ellington, general store, have failed and sold out.

ATLANTA.—A receiver has been appointed for T. P. Aines, agent, lumber.

BLAKELY.—T. B. Moore, general store and liquors, has failed.

CONYERS.—S. J. Cowan & Son, general store, have had a mortgage foreclosed.

GREENVILLE.—A. M. Baldwin, general store, has assigned.

WASHINGTON.—Julius Philips, has sold out his stock, valued at $4,000, to his brother, who held a claim for $3,500. It is said Julius Philips owes $10,000 more.

ILLINOIS.

BRUSSELS.—Stahl & Benken, general store and mill, have assigned. Liabilities over $10,000; assets $3,763.

CHEBANSE.—James Capen & Co., grain, have been closed by the sheriff. They ran eight elevators, and have been slow in meeting their payments for some time past.

CHICAGO.—Frank E. Hooper, wholesale tobacco and cigars, has assigned. Liabilities $45,000; assets $20,000. He succeeded Parmlee & Hooper January 9, 1882.

CHICAGO.—Edmund Wheeler, tailor, has assigned to Simon Strauss.

FAIRBURY.—H. & M. Katz, clothing, have assigned at Wellington, Ohio.

GALESBURGH.—T. W. Rogers, agricultural implements, has assigned.

HAVANA.—Low & Foster, grain, who recently assigned, are reported to owe $48,000.

O'FALLON DEPOT.—R. Kampmeyer, stoves, has been attached, and is reported to have left town.

ROCK ISLAND.—A. W. Anderson, produce commission, has assigned. Liabilities $8,000; assets $5,000.

ROCK ISLAND.—F. C. Coss & Co., shoes, confessed judgment for $900, and were closed by the sheriff on the 17th inst.

SPRINGFIELD.—Frank Meyers, dry goods and shoes, has confessed judgment for $27,000 in favor of his mother, and the sheriff took possession. Liabilities $37,000; actual assets $12,150.

SPRINGFIELD.—Kimber, Ragsdale & Co., dry goods, have confessed judgments for $36,300 to the Ridgely National Bank and gave a real estate mortgage for $28,500 to secure the bank on the judgments. They have assigned to C. L. Conklin. Liabilities estimated at $70,000; nominal assets $75,000. There are thirty-eight creditors in New York city for small amounts.

SPRINGFIELD.—Moody & Crab, dry goods, confessed judgment for $1,310, and assigned.

INDIANA.

INDIANAPOLIS.—J. B. Cameron, music, has assigned. Liabilities $2,500; assets $500.

INDIANAPOLIS.—J. H. Lodge, shoes, has become embarrassed, not being able to turn his stock to meet maturing obligations. Liabilities $3,600; nominal assets $6,200.

INDIANAPOLIS.—C. H. Talbott, trading as C. H. Talbott & Co., wholesale hats and caps, has assigned.

MIDDLETOWN.—C. C. Sanders & Co., general store, have failed and confessed judgment.

POSEYVILLE.—T. C. Jaquess, general store, has assigned to James M. Shackelford. Liabilities $8,000; assets about $2,500.

RICHMOND.—E. L. Davis, notions, has failed.

WARSAW.—E. H. Spangle, jewelry, has been closed by the sheriff.

IOWA.

COIN.—B. F. Jeffords, jewelry, has disposed of all his goods, and is reported to have left town.

MAPLETON.—J. R. Cameron, general store, has assigned.

OSAGE.—J. W. Buchanan, music, has been closed on a chattel mortgage.

POSTVILLE.—D. Osterdock, dry goods and clothing, has assigned to Henry Harris.

WHAT CHEER.—Isaac Sender, clothing, has failed.

KANSAS.

CONCORDIA.—Leverean & Judy, general store, have been attached for $9,000. Liabilities $16,000; nominal assets about the same. The partners disagreed and sold out.

HIAWATHA.—Jordan & Saeger, groceries, have been attached for $1,800. Mr. Jordan, who managed the business at Hiawatha, is said to have involved himself to the extent of $4,000. The stock will inventory about $3,000. This is a branch of the St. Joseph house.

KIRWIN.—George W. Wood & Co., furniture, have failed, and the mortgagees took the stock.

LEAVENWORTH.—J. B. Driesbach, confectioner, has been closed on a chattel mortgage for $1,200.

OLATHE.—Joseph Marriner, shoes, has assigned. Liabilities $2,100; assets $2,000.

PARSONS.—J. H. Sayre, successor to Sayre & Squires grocers, has failed.

WICHITA.—John B. Curry, jeweler, has closed out his stock to a creditor whose claim was about $2,500.

KENTUCKY.

FRANKFORT.—J. F. Bailey, groceries and liquors, has assigned and been attached.

LOUISVILLE.—J. F. Griffin & Sons, clothing, offer to compromise at 40 cents.

LOUISIANA.

LAKE CHARLES.—Julius Meyers & Co., general store, are asking an extension, offering one-third cash and the balance in one and two years. Liabilities $70,000; assets $120,000.

NEW ORLEANS.—Robert Fasnacht, liquors, has been attached for $9,600.

NEW ORLEANS.—Charles Prager, saloon, asks for respite. Liabilities $13,000; assets $18,000.

OPELOUSAS.—Mrs. Blanche Roos, general store, is asking an extension.

THIBODEAUX.—J. M. Landry, general store, has been attached.

MAINE.

AUGUSTA.—The recent attachment against S. S. Brooks & Co., hardware, was on a disputed matter, and does not affect their standing.

BIDDEFORD.—The liabilities of Alfred Willett, provisions, are about $1,000; assets $300.

BOWDOINHAM.—A. H. Drummond, clothing, is offering to compromise at 50 cents. Liabilities $3,000; assets $2,000.

BUCKFIELD.—George A. Gordon & Co., drugs and groceries, have been closed by the mortgagee on a claim of $950. They are said to owe $1,600 besides.

EAST BOOTHBY.—Simon McDougall, dry goods, has failed Liabilities about $14,000; assets $10,000.

LEWISTON.—Freeman B. Kilgore, auctioneer, has failed, and offers 25 cents.

LEWISTON.—J. A. Rodick & Co., dry goods, have assigned. Liabilities $7,794; nominal assets $6,031; actual assets $2,500.

LEWISTON.—Solomon Rubin, shoes, has been attached.

PORTLAND.—The liabilities of E. A. Gilson, hotel, are about $15,000; nominal assets $4,000. He has gone out of business.

PORTLAND.—George A. Harmon, jeweler, has assigned. Liabilities $5,002.

MARYLAND.

BALTIMORE.—Meyer & Benjamin, cloths and tailors' trimmings, have assigned to M. S. Weil.

BALTIMORE.—T. Parsons & Sons, china and glassware, have assigned to James F. Newbold. They had $2,500 borrowed money in the business.

BALTIMORE.—The Baltimore Retort and Fire Brick Works are advertised to be sold out by the receiver on the 29th inst.

CUMBERLAND.—J. C. Derr & Son, shoes, have assigned.

MASSACHUSETTS.

ATTLEBORO.—F. D. Hall, jeweler, is in insolvency.

BOSTON.—P. A. Burns, dry goods, offers 33 1-3 cents, which will probably be accepted.

BOSTON.—Samuel Burrell, provisions, has failed.

BOSTON.—W. H. Elliott, jeweler, offers 25 cents. Liabilities about $2,600.

BOSTON.—Newhall & Thatcher, hides, have failed.

BOSTON.—Joseph Roffe, cigars, has failed and been attached.

BOSTON.—Seth Winslow & Co., furniture, offer 25 cents, which, it is thought, will be accepted.

BROOKFIELD.—James Mulvey, grocer, has been attached.

EAST BROOKFIELD.—Moulton & King, iron founders, have failed, and unsecured creditors, it is thought, will get but little. The property, valued at $850, is mortgaged for $425.

EAST FALMOUTH.—J. H. Robinson, grocer, has failed. Liabilities $3,000; assets $400.

GREAT BARRINGTON.—Eugene S. Thatcher, grocer, has gone into insolvency.

HAMPDEN.—W. H. Barnes, general store, is reported offering to compromise at 33 cents.

HOLYOKE.—Louis Morin, baker, has failed and settled at 25 cents. Liabilities about $3,000.

HOLYOKE.—The Holyoke Woven Wire Mattress Company are reported offering 25 cents.

LAWRENCE.—Charles A. Holt, pump maker, has been attached.

LAWRENCE.—Charles V. Jackman, ice, has been attached.

LYNN.—The creditors' petition against C. M. Knapp, shoe manufacturer, has been dismissed.

MALDEN.—J. C. Russell, drugs, offers 25 cents, which the creditors have voted to accept.

NEWTONVILLE.—Asa P. Doane, fish, has failed and the creditors have voted to accept 25 cents. Liabilities $2,000; assets $700.

RANDOLPH.—The liabilities of Ira D. Page, grocer, are $3,660. Creditors have declined the offer of 20 cents, and he will settle in insolvency.

SALEM.—The schedules of John W. Tapley, hotel, show liabilities $5,642.

SANDWICH.—F. M. & G. L. Tinkham, grocers, offer to compromise at 10 cents.

SOUTH HADLEY.—F. W. Brockway, market, is asking an extension.

SPRINGFIELD.—S. T. Dermott, tailor, has filed a petition in insolvency.

STOUGHTON.—Shepard & Buckley, gents' furnishing goods, offer 40 cents, which will probably be accepted.

WOBURN.—L. B. Norris, box manufacturer, has gone into insolvency. Liabilities $25,000; nominal assets $29,000.

WORCESTER.—L. G. Joslin, shoddy, has been attached. Liabilities are $12,000. He was insured for $5,000 and he assigned $2,300 of this amount to the mortgagee.

MICHIGAN.

BAY CITY.—The stock of Edward Goddeyne, drugs, has been taken on a chattel mortgage.

BURLINGTON.—Demorest & Sheriff, notions, are reported to have left town with debts unpaid.

CHEBOYGAN.—Wheeler & Wheeler, grocers, are reported to have assigned to J. F. Moloney. Liabilities about $6,000; nominal assets $7,000.

DETROIT.—T. J. Hughes, crockery, has assigned to James B. McCracken. He was recently sued by a New York creditor for $900.

DETROIT.—Mrs. Julia Pfannenschmidt, tailor, has assigned to Martin Maier.

GRAND RAPIDS.—E. S. Corey & Co., box manufacturers, have assigned. They gave a chattel mortgage for $8,286 to the City National Bank.

JACKSON.—Edward Crowe, tailor, has assigned to D. V. Bunnell.

JACKSON.—Robert Lang, grocer, has assigned to Joseph Hanan. He is said to have bought goods to the amount of $11,000 in the past ninety days, the bills of which are coming due now. He also gave chattel mortgages to friends for $2,668, which cover all the stock, valued at about $3,000.

KALAMAZOO.—Mrs. S. M. Fisk, millinery, has assigned to H. E. Hoyt.

KALAMAZOO.—David H. Francis, general store, has assigned.

MONROE.—The liabilities of C. Loose & Son, fruit dryers, who have failed, are placed at $50,000 and assets $6,000. The failure is attributed to indorsing for his son, of J. M. Loose & Co., patent medicines.

MINNESOTA.

MINNEAPOLIS.—Ferguson & Co., grocers, have sold out in favor of a creditor.

MINNEAPOLIS.—H. D. Wood, wholesale hardware, has called a meeting of creditors for the 20th inst. It is said that he has borrowed $100,000 on his Nicollet avenue property. The firm of Wood, Boshart & Co., which dissolved in December, and which Mr. Wood succeeded, started off with good prospects, but petty quarrels and real estate speculations, it is said, appear to have changed their prospects in only a few months.

ST. CLOUD.—E. Robertson, grocer, has assigned.

WINONA.—Fockens & Satori, general store, have assigned to G. W. Willis.

MISSISSIPPI.

BIG SPRINGS.—T. Copwood & Co., general store, have failed and been attached.

BOLIVAR.—E. W. Phillips & Co., general store, have failed.

BRUNSWICK LANDING.—L. M. Wade & Co., grocers, are in the hands of the sheriff on attachments for $5,600. The assets are estimated at about $12,000.

GLENORA.—Morris Rosenstock, general store, has assigned.

HAZLEHURST.—A. B. Ainsworth, general store, has been attached.

KOSCIUSKO.—J. M. Smith, saloon, has failed and sold out. Liabilities $500; no assets.

LOUISVILLE.—J. C. Woodward, agent, general store, has failed. Liabilities $3,000; assets about $1,300.

MAGNOLIA.—J. E. Wolfe, general store, has failed and sold out.

SHUBUTA.—Creditors of W. B. Dickerson, general store, who was burnt out in December, have attached the insurance money, $6,000, to secure their claims.

VICKSBURG.—Gotthelf & Co., jewelers, have been attached for $12,000.

MISSOURI.

APPLETON CITY.—N. S. Gardner, general store, has called a meeting of creditors.

BOONVILLE.—Andrew Summer, clothing, has given a deed of trust to his uncle to secure a debt of $3,500 to him and $4,000 to other creditors, which the uncle has agreed to pay. The stock is worth about $7,000.

BUTLER.—M. E. Bishop, general store, has been attached for $900.

CONCORDIA.—John Geck, saloon, has assigned to J. C. E. Bascom.

HUNTSVILLE.—Frank Heyman, grocer, has asrigned.

KANSAS CITY.—Stiefel & Co., wholesale liquors and cigars, have been attached for $8,549.

KANSAS CITY.—Rufus Suits, ladies' suits, has been closed by the sheriff on attachments for $3,910. He transferred the stock to his wife.

MARSHALL.—Maxey & Kice, grocers, have assigned.

ST. JOSEPH.—J. V. Brady, wholesale teas and cigars, is offering to compromise. Liabilities $20,000; assets $20,000, consisting of stock $8,000; good accounts $12,000.

ST. LOUIS.—Charles Conrad, trading as C. Conrad & Co., wines, liquors, etc., has failed, and called a meeting of creditors for the 22d inst. Liabilities $500,000; nominal assets about the same. He had several branches in Colorado and Texas, and employed a large force of men in pushing trade. It is said his business doubled in the past year, for which his capital was not sufficient. The rapid extension of the business is ascribed as the main cause of the failure. The business was established about eighteen years ago by Mr. Conrad and his brother-in-law, Bernard Hoehl, who sold out his interest to Mr. Conrad in 1873.

ST. LOUIS.—C. W. Handley & Co., pianos, sold out on the 10th inst. to Field, French & Co. Since then he was attached for $2,900, and on the 16th inst. assigned. Nominal assets $11,590.

NEBRASKA.

GUIDE ROCK.—H. Connelly, restaurant and groceries, has assigned.

HASTINGS.—Benner Brothers, cigar manufacturers, have suspended.

OMAHA.—Philip Lang, shoes, has assigned.

PONCA.—Samuel F. Price, general store, has failed. Liabilities about $4,000; assets small.

ST. PAUL.—M. D. Haddock, general store, has given a bill of sale.

STROMSBURG.—L. M. Woods & Co., general store, have assigned to J. L. Johnson.

WYMORE.—Hoag & Faxon, restaurant, have dissolved and failed.

YORK.—D. S. Pomeroy, notions, is reported to have left town with debts unpaid.

NEVADA.

AUSTIN.—William A. Clifford, grocer, has failed.

CANDALARIA.—P. Funkenstein, formerly general store, has filed a petition in insolvency.

ELKO.—J. Rosenstock, dry goods and clothing, is offering to compromise at 33 1-3 cents. Liabilities $10,000; assets $6,000.

EUREKA.—James S. Allen, hotel, is advertised to be sold out by the sheriff.

NEW HAMPSHIRE.

MANCHESTER.—John N. Baker, jeweler, has been attached. Liabilities reported at $13,000; nominal assets $12,000.

NEWPORT.—A. A. Huntoon, grocer, has failed and offers to compromise at 25 cents.

NEW JERSEY.

PATERSON.—George Young, stoves, has assigned.

NEW MEXICO.

ALBUQUERQUE.—Lowenthal & Jones, restaurant, have been closed on chattel mortgages.

NEW YORK.

ALBANY.—The liabilities of Campbell Brothers, stoves, are $18,000; assets $15,000; preferences $10,500.

BATH.—L. H. Brown & Co., grocers, have assigned to W. L. Hodgman, giving preferences for $1,500.

BINGHAMTON.—D. C. Stryker & Son, grocers, have assigned to William H. Scoville. Liabilities about $10,000, of which $2,600 is preferred and $4,500 secured by realty mortgage; assets about $3,500.

BOLIVAR.—W. F. Davis, millinery, has assigned.

BUFFALO.—The liabilities of John H. Davis, gents' furnishing goods and jewelry, are $15,266; nominal assets $8,976; actual assets $5,802.

BUFFALO.—The schedules of J. H. Isham, jeweler, show liabilities $11,368; nominal assets $12,536; actual assets $10,647; preferences $2,650.

CANANDAIGUA.—Culver, Fisher & Son, dry goods, have assigned to William Culver, giving preferences for $2,000. Charles G. Fisher, of the firm, also made an individual assignment to C. J. Canfield.

CANANDAIGUA.—M. L. Parkhurst, of Parkhurst & Durgy, grocers, lately dissolved, is offering to compromise at 70 cents.

CHATEAUGAY.—Mrs. Francis M. Day, general store, has assigned.

CHATEAUGAY.—Mrs. J. H. Stoughton, millinery, has assigned.

DANSVILLE.—Helen M. Hogmire, drugs, has been closed on several executions aggregating $2,382, which more than cover the stock.

DUNKIRK.—W. K. Hequenborg, general store, has assigned. He owned considerable real estate, mortgaged for $11,894.

EAST RANDOLPH.—E. T. Smith, tanner, has assigned to S. W. Thompson. The liabilities, not including real estate, are estimated at from $75,000 to $100,000, and assets, exclusive of real estate, from $40,000 to $60,000. The real estate is said to be mortgaged for full value. A Boston firm claims all the hides and leather in the tannery for advances and by virtue of a contract with Mr. Smith, which is not filed.

FORT ANN.—G. W. Hull, clothing and shoes, has assigned to P. Sheldon, giving preferences for $2,472.

GENEVA.—The schedules of George C. Dorsey, grocer, show liabilities $12,978; assets $6,768.

GENEVA.—George E. Flood, drugs, has assigned to H. K. Winnie.

JAMESTOWN.—R. J. Forbes, grocer, has assigned.

LOCKPORT.—Jeremiah F. Lerch, dry goods and millinery, has assigned to James O. King. Liabilities about $20,000; assets $12,000.

LONG EDDY.—J. H. Sullivan, general store, is reported to have been closed by the sheriff on confessed judgment for $1,200. Liabilities about $3,000; assets $2,000.

NEWFANE STATION.—James H. Mandeville, grocer, has assigned to C. V. Tompkins.

NEW YORK CITY.—William S. Blunt, pumps, assigned on the 17th inst. to Edward G. Whitaker, without preference. Liabilities about $7,500.

NEW YORK CITY.—Nathaniel A. Boynton assigned on the 15th inst. to Louis Lafrance, giving preferences to John H. Bird $2,000; Market National Bank $10,000. Mr. Boynton retired from the firm of Richardson, Boynton & Co., stoves, in February last. His assignment was the result of indorsing the paper of Alonzo Follett, the note broker, for over $1,000,000.

NEW YORK CITY.—The schedules of John I. Brower & Son, wholesale hardware, show liabilities $55,044; nominal assets $44,735; actual assets $33,975. The schedules of Brower & Leeds show liabilities $7,958; nominal assets $4,120; actual assets $3,881.

NEW YORK CITY.—The schedules of A. Brown & Co., fancy goods, show liabilities $5,440; nominal assets $5,952; actual assets $3,968.

NEW YORK CITY.—The schedules of James A. Dolan, grocer, show liabilities $16,698; nominal assets $9,760; actual assets $8,758.

NEW YORK CITY.—W. D. Ferris, produce, suspended on the 13th inst., it is said on account of the rise in lard, in which he was caught short. Liabilities about $4,500.

NEW YORK CITY.—August H. Goetting, stationer, assigned on the 13th inst. to James A. Brown, giving preferences to Mary Hutchins, of Springfield, Mass., $8,000; Lydia Kraezer, of Brooklyn, his grandmother, $14,592; total $22,592. He started a manufactory of perfumery in Brooklyn some time ago, but sold it out to his uncle last month. His liabilities are reported at $60,000. Ill health and unprofitable business are ascribed as the causes of the failure.

NEW YORK CITY.—Louis Greenbaum, manufacturer of cigars, assigned on the 18th inst. to Abraham Englehart, giving preferences to Joseph Stearns $2,340; Sophie Stearns $150; total $2,490.

NEW YORK CITY.—The schedules of George W. Holman, trading as the Holman Pad Company, show liabilities $26,709; nominal assets $24,226; actual assets $4,786.

NEW YORK CITY.—The schedules of J. L. Jackson, Jr., liquors, show liabilities $2,805; nominal assets $2,343; actual assets $1,515.

MONCTON.—W. McK. Weldon, general store, has assigned. The property is covered by a bill of sale of $4,000.

NOVA SCOTIA.

HALIFAX.—Francis Carvill & Son, lumber exporters, have failed. They were a branch of the London firm which recently suspended.

HALIFAX.—James S. Scott, fish and commission, has assigned to S. H. Shreve. Liabilities about $10,000; assets small.

PROVINCE OF ONTARIO.

BOWMANVILLE.—W. T. Scott, Jr., shoes, is offering to compromise at 35 cents.

BLYTH.—T. J. Senior, baker and grocer, is advertised to be sold out by the assignee.

DIAMOND.—Robert Walker, Jr., agricultural implements, is reported to have left the country.

DOVER.—C. McGilvery & Son, shoes, are advertised to be sold out by the assignee.

FLORENCE.—F. A. Bourne, dry goods, is reported financially embarrassed, and being sued.

HAMILTON.—John Crow, jeweler, is in the hands of the sheriff.

LONDON.—James Busby, liquors, has been sold out by the sheriff.

SPRINGFIELD.—E. Chandler, drugs, is reported in the hands of the sheriff.

TORONTO.—William Damer, wholesale and retail shoes, has assigned. He owes about $60,000. It is said his assets will show a surplus, but not in an immediately realizable shape.

TORONTO.—John Damer & Co., shoes, is financially embarrassed. He states that his brother William owes him $15,000 borrowed money, besides being on his paper for a large amount, that William would not pay him the interest, and that he refused to indorse any further for him. John admits that he cannot take up the paper.

TORONTO.—Joseph Holman, shoes, has assigned.

TORONTO.—R. Malcolm, saddler, is asking an extension.

PROVINCE OF QUEBEC.

COATICOOK.—L. W. Paige, stationer, has assigned.

QUEBEC.—The liabilities of J. L. Martineau & Son, hardware, are about $70,000, of which $45,000 are direct; nominal assets $40,000.

QUEBEC.—A. Turgeon, tanner, has failed.

MONTREAL.—The File & Spring Company has suspended.

RIMOUSKI.—Dastons & Co., general store, has assigned.

ST. JOHNS.—Bennett & Co., groceries and dry goods, have assigned.

ST. TIMOTHE.—M. P. Scott & Co., general store, have assigned.

STANFOLD.—P. H. Matte, tanner, is offering to compromise at 25 cents.

SUTTON.—The stock of T. Lague & Co., general store, is advertised to be sold out by the trustee.

THREE RIVERS.—G. Bruneile & Fils, grocers, have assigned.

A BUSINESS MAN

WANTED, with one hundred thousand dollars capital, to take the stock interest and executive management now held by another party, in a large joint stock company of twenty years' standing and doing a business all over the world. Headquarters in New York City. Stock will be sold at par, and will earn thirty per cent. A first-class working business man is wanted. For further particulars address, with full name and reference, if name is not in mercantile reference books,

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JANUARY 27, 1883.

NOTES OF THE WEEK.

The stock market has suffered a bad blow this week from the break-up of the bull combination. Its members seemed to have found the job they had undertaken too much for them, and some sold out, causing dire confusion. The beginning of the end in the bull movement was the break in Union Pacific last week; and when the attempt was made to start afresh this week, the pet stock of the combination—Denver & Rio Grande—went all to pieces, declining rapidly about 7 per cent. The market on Wednesday, when the retreating bulls dropped their holdings in very large amounts, was only steadied by the free purchases of the leading bear operators. After an interval of rest on Thursday the attack was renewed yesterday, and Union Pacific was again the club which smashed prices, some heavy blocks being dropped on the market, sending the price below par.

Our correspondent at Washington sets forth elsewhere the slow progress of tariff legislation, or rather the lack of progress. The simple truth is that, owing to the very great extent of the tariff schedule and the complications thereof, it is not possible for any one man or any committee to form any scheme of reduction save by laying down some general principle and following the same, with but little reference to incidental results. This, however, is impossible, or practically so, under existing circumstances. So many interests are fiercely contending for advantage that in the resulting confusion general principles are quite lost sight of. The policy of protection, to which the country was fully committed by the legislation of the war period, was originally accepted under the plea, first, that it would, as a matter of course, be a temporary policy—a means to an end—and, second, that it would only be applied to a limited number of leading industries, this latter on the theory that minor industries necessarily cluster around great ones. It was also taught that when once a protective tariff should help an industry to a condition of robust strength the rates of duty would thereafter be gradually reduced, and finally taken away entirely so far as protective considerations were concerned. This doctrine was specially taught by Frederick List, author of the "National System of Political Economy." It is safe to say that on any other plea it would not have been possible to induce the country to accept the policy of protection. The difficulty is that List simply set forth a theory which could not be carried out to the end save by an imperial government capable of dealing with a question of taxation in a purely scientific manner, as an engineer would build a suspension bridge.

It is believed that the only safe road out of the existing jungle is through greater frankness on the part of manufacturers and a declared willingness to submit to a gradual reduction of duties levied for protection. So far as the evidence at hand enables us to judge an exactly contrary policy is pursued; that is to say, the captains of industry are fighting for the highest possible rates of duty, in the apparent belief that only in this way can they successfully fight those who would abolish protective duties entirely. Beyond question this is a mistaken policy. Persisted in, it will precipitate upon the country a popular contest at the ballot-box over the tariff question, to the exclusion of quite everything else until that is settled. The tariff question can only be taken out of politics by the manufacturers themselves. As we have more than once pointed out, a protective tariff for the promotion of a given industry is in the nature of a patent, with this difference, that the number of years a patent is to run is known in advance, whereas a tariff is supposed to continue until the industry in question shall be able to stand alone. To determine this point is practically impossible so long as the manufacturer declines to reveal the true condition of his industry in relation to foreign competition. We believe that the position of BRADSTREET'S at this stage in the tariff controversy is the only one which will bear the test of experience. The manufacturers, in order to guard against a popular contest at the ballot-box, with all its distracting influence upon the business interests of the country, should aid in devising and having passed into law a scheme for the gradual reduction of protective duties.

Resort to the technicalities of the law as part of the tactics of speculation is a comparatively new feature which has been developed within the past year in this country in connection with the speculation in grain, provisions and railway stocks. The latest instance of it is the case of Mr. John B. Lyon, who is one of the most prominent members of the Chicago Board of Trade, and has been known for many years as one of the boldest and most successful speculators in corn, which has always been his specialty. Heretofore Mr. Lyon has hundreds of times had the benefit of the rules of the Chicago Board of Trade for the enforcement of contracts made between its members, and has always considered these rules excellent, because they enabled him to compel payment. But this year Mr. Lyon made a mistake; he was too confident a bear, and sold too much corn for January delivery, and now appeals to the courts, and sues out an injunction against some dozen other members of the board to restrain them from either calling upon him for more margins or from buying in the corn on his defaulting contracts, as the rules of the board permit these other members to do. If there are any qualifying circumstances to this repudiation of contracts they do not appear on the surface. But even if there are any that do not appear, Mr. Lyon, by appeal to the courts, has taken the position that the Chicago Board of Trade would not do him justice. In whatever way it may be viewed it is an attack upon the power of the Chicago Board of Trade to discipline its members, and therefore an attack upon its existence as a commercial body. But aside from this, the practice of appealing to the courts as a means of escape from contracts which the parties have entered into with their eyes fully open to all the contingencies of the case, is destroying confidence in commercial circles, and bringing the law into contempt as a mere tool of speculation. Men are resorting to these methods now who would have been ashamed to do so a few years ago.

In dealing with the silver question the St. Louis *Globe-Democrat* records its belief that "the enemies of silver hope to create a distrust of silver, and thus force it out of circulation." This method of dealing with a practical question, the right disposition of which has a most important bearing on the future of American trade, illustrates how difficult it continues to be for men to divorce metaphysics from finance. We venture to suggest to the St. Louis journal named that it has need to construct definitions for its own terms. Thus, what does the word monometallist mean at the meridian of St. Louis? If monometallism means the entire exclusion of one of the two precious metals from circulating as money no more certain method can be devised than to continue coining 412½-grain so-called silver dollars at the rate of $2,000,000 a month. A further decline in the price of silver bullion will only facilitate the process, as the cheaper the silver the more "dollars" will a given amount make. We do not know of any one who wants to "force silver out of circulation." We do, however, know of numbers of clear-sighted people who deplore the fact that if the extreme silver men continue to insist upon coining $2,000,000 a month of 412½-grain silver pieces, or so-called dollars, and are able to continue, they will in due season change the standard measure of values in the United States by substituting silver for gold.

For the consideration of the *Globe-Democrat*, it is submitted that the notion of a double standard is a metaphysical absurdity. At one time silver had the preference, as compared with gold, for use as money. In the ordinary course of things, gold, in obedience to the influences which made the clearing house necessary, was given the preference. There being therefore less need of the metal as a medium of exchange, its price naturally tended to depreciate. This tendency has been hastened by excessive production of the metal. To-day the silver coin stamped "one dollar" by the United States mint contains about 82 cents of "hard" money and 18 cents of "fiat" money. The paper promise of the United States to pay one dollar is "as good as gold," because the Treasury stands ready to make good its promise with gold. We believe the right thing to do under the circumstances is to encourage the use of silver as a subsidiary coin as much as possible, and to further extend the clearing-house principle, that there may be less need of either metal. Provided it will undertake to define its own terms, a condition to which BRADSTREET'S, of course, accedes, we invite the *Globe-Democrat* to a candid discussion of the silver question.

The telegraph companies, it would seem, are going to test the merits of the underground system. It is understood that the Western Union Company has given out a contract for the laying of a tube under Broadway large enough to contain two hundred wires, and which is to extend from the main office in the city of New York to another station about two miles distant. The work on this contract will begin, it is said, as soon as the weather moderates sufficiently to permit it to be carried on rapidly. There is little doubt that if the experiment turns out satisfactorily the system will be extended to other parts of the city. In regard to the success of the enterprise, it appears, some of the telegraph authorities are in doubt.

A LESSON IN LOCAL GOVERNMENT.

When writing of the local government question we have pointed out that the ills which afflict the direction of city business in the United States can be traced, in great part, to the endeavors in earlier years to guard against the perils of the democratic principle by getting rid of its operation in part. To determine the truth of this proposition it is only necessary to examine the files of New York's daily journals from 1857 to 1860, when, owing to the low tone of the Board of Alderman—the local legislature—a loud demand arose in the newspapers and otherwise for some device or other from Albany which would work automatically and take the place of the unsavory aldermen as the real government of the city. Apparently overlooking the soundness of Bentham's dictum, that "a board is a screen," the device came in the shape of various commissions, whose crude working is now known of all men. The return to this subject has been suggested by the outcome of the defeat of James McManes for reëlection as a trustee of the Philadelphia Gas Works. Philadelphia is one of the two or three cities in the Union owning their own gas-works. The history of the management of these works constitutes a forcible illustration of the truth of the proposition given at the outset.

In 1841, when it had been determined that the city should monopolize in the corporation the manufacture of illuminating gas, it became necessary for the city to borrow the capital required for the investment. The men in control at the time, of whom Frederick Fraley, now president of the National Board of Trade, was one, were unwilling to intrust to the city councils the direct control of the works and the application of the money so borrowed. They wished to relieve themselves of the greater vigilance that would be required with the increased responsibility of councils. To this end a commission, to be known as a board of trustees, was devised, to be elected by councils—the local legislature—but not to be responsible thereto. In the language used in the city digest of 1856, "the principle adopted was a management that would be responsible but not subject to the city legislature, and such a permanency in the management as would secure the works from the effect of sudden political changes in councils." Here was a distinct tying up of the representative principle. Neither the councils nor the mayor were to be intrusted with the power to remove the directors of the Gas-Works. Thus the appointing power was without the authority to discipline and correct. Councils might try to investigate, as they at times did: but, having no power of subpœna, the investigation was a farce. It was soon seen by the men making politics their sole business how good a thing a membership in the Philadelphia Gas Trust might become, and gradually men like Frederick Fraley dropped out, and self-seekers were elected to the vacancies. The conditions of the management are well illustrated by the fact that the city councils were practically compelled to borrow money for the extension of the works on the application of the trustees, and this, as indicated, without power to inquire into the mode of its expenditure. This is the Gas Trust of which so much has been said of late in connection with Philadelphia local politics. It comprised twelve members. Having the unchecked direction of so large an industrial enterprise as the gas-works of the second city in the Union, they in due time had in hand a compact, easily-wielded political machine, having a distinct commercial value. By giving assiduous attention to local politics the trustees, under the leadership of McManes, came to control to a large extent the membership of councils and the acts thereof. The only agency which was left for directly inquiring into the working of the Trust—the local courts—came to be somewhat under the malign influence, as judges in Philadelphia are elected by popular vote. More than any other one influence the reign of the Gas Trust went to reduce politics in Philadelphia to the level of the huckster. The reports given out by the Trust were curiosities in their way. In unimportant matters the utmost detail was given, but in relation to the real operations of the Trust nothing of any importance was divulged. Under the spirit of reform, which has obtained in Philadelphia since the city set out to do an exclusively cash business, the Trust has now been reformed through the gradual election of new members by the reformed councils. It is plain, therefore, that what little was left of the representative principle to act upon the Trust has finally been effective for its reformation. As stated, James McManes, who has been the boss of the Trust, was defeated last week for reëlection, the effect of this defeat being to give the reformers a majority of the trustees. Philadelphia will probably go out of the gas business soon, as the wisdom of selling the works, under proper safeguards, is already under consideration. But the history of the attempt to avoid the perils of the democratic principle by the device of an irresponsible trust, which transacted business in secret session and issued no reports, will long continue as a satire upon those who were in control in Philadelphia forty years ago. It should not be inferred that in emphasizing the necessity of giving the representative principle free play we attach thereto undue importance. On the contrary, we freely admit that under the purely democratic form representative government will always be crude. It is only intended to point out that the democratic is the only system we have. For that reason it should have free play in relation to the direction of city business in the United States. Under a method of strict accounting, which would be the natural outgrowth of the adoption of the pay-as-you-go method, in place of the present loose credit system, local government hereabouts will attain to the best possible results.

THE IRON AND STEEL INDUSTRY IN 1882.

The iron trade of the United States for 1882 has been declared by those most interested to have been the reverse of satisfactory. This is not hard to understand. A year in which there were four months of enforced idleness at a large majority of the rolling mills, and which witnessed a general reduction in values in all lines—the whole following hard upon a year of exceptional activity and prosperity—is sure to compare unfavorably. The following monthly quotations, from the *Iron and Steel Bulletin*, per gross ton, on the leading lines of iron and steel manufacture, with exceptions noted, indicate the falling away in prices during the year just concluded:

	Jan., 1882.	*Dec.*, 1882.	*Decrease in price.*
Old T rails at Philadelphia	$30.00	$27.00	$3.00
New iron rails at mill	48.50	*45.00	*3.50
Steel rails at mill	56.50	39.00	17.50
Foreign Bessemer pig at Philadelphia	27.50	22.50	5.00
No. 1 anthracite foundry pig at Phila.	26.00	25.75	.75
Refined bar iron (Pittsburgh) per lb.	.025	.022	.003
Nails, (gross) Pittsburgh, per keg	3.35	3.40	†.10
Grey forge pig, lake ore, Pittsburgh	28.00	23.00	5.00
Grey forge pig, lake ore mixed, Pittsb'g	25.00	21.50	3.50

*For August—none quoted later. †Increase on the year.

No. 1 anthracite foundry pig iron, it is noted, dropped in price but 75c. per gross ton, in striking contrast to the decline in other makes. This was largely due to the supply being at no time forced ahead of the demand. Nails were also held back as to production, and the value thereof was therefore kept well in hand. This policy by the nail manufacturers has again been put in operation, as noted in the market reports in this journal a week ago. The production of iron rails is stated to have been less in 1882 than in any year since the close of the war, undoubtedly owing principally to the increasing use of steel rails. Mr. Swank estimates the total output of iron rails in 1882 at 250,000 gross tons, against 436,233 gross tons in 1881. In the latter year the domestic manufacture of open-hearth steel rails was 22,515 gross tons, and of Bessemer steel rails 1,187,770 gross tons. The same authority above quoted estimates the production of steel rails of all kinds in the United States in 1882 at 1,500,000 gross tons, indicating a total domestic production of rails of all kinds last year of 1,750,000 gross tons, against 1,646,518 gross tons in 1881. The past twelve months' production of pig and rolled iron is believed to be below the total for 1881. The records of imports of leading manufactures of iron and steel from Great Britain for the past year are not yet available, but those for eleven months of the past year, as compared with a like portion of the preceding year, are as follows:

	Gross tons. 1880.	1881.	1882.
Iron and steel rails	207,094	277,518	191,056
Pig iron	593,448	373,244	458,137
Old iron for remanufacture	192,615	82,750	83,877
Steel unwrought	37,794	116,661	126,426
Tin plates	151,950	103,940	199,526
Hoops and sheets	43,820	33,303	36,011
Bar, angle, bolt and rod	50,707	15,719	20,375
Totals	1,277,428	1,060,225	1,115,408

The slight decline from eleven months of 1880 to a like portion of 1881 is shown to be almost made good in eleven months of 1882. A number of journals have pointed out the gains in the several totals of 1882 over those of 1881, given above (except in the case of iron and steel rails), and have seen nothing in them but a legitimate cause of the depression existing among our own iron and steel industries during 1882, and reason enough for a change of the "metal schedule" of the tariff laws looking to a higher rather than a lower rate of duty on various articles. The capacity of domestic blast furnaces in blast January 1, 1883, as shown in the *Iron Age*, was 106,184 tons per week. The number in and out of blast on the date named, as compared with the situation one year ago, was:

Furnaces.	*In blast Jan. 1,* 1882.	1883.	*Out of blast Jan. 1,* 1882.	1883.
Charcoal	155	123	117	128
Anthracite	169	169	67	64
Bituminous	142	138	78	88
Totals	466	430	262	280

RAILWAY DEVELOPMENT IN THE NORTHWEST.

The annual report of the Railroad Commissioner of Minnesota exhibits a development of transportation facilities in the northwest which, on investigation, proves to be typical of that which has been common to the whole of the region lying beyond during the past year. Minnesota, with a total of 3,749 miles of railway, on December 1, 1882, completed 532 miles during a twelvemonth, furnishing 72 out of 78 counties with the advantages of transportation by rail. The total outlay for railways within the boundaries of the state had, on June 30, 1882, amounted to $149,312,641, or an average cost of $43,934 per mile. Of this sum Minnesota alone had given $76,489,790 in bonds and lands, or an average of $23,331 per mile. An examination of the more important sections of the report as to the workings and earnings of the individual roads, whose affairs are discussed by the Minnesota Railroad Commissioner, present some suggestive facts. To begin with, the percentage of operating expenses to gross earnings for twelve months ending June 30 last was as follows:

Northern Pacific Railway	43.44
Minneapolis, Lyndall & Minnetonka	47.00
St. Paul, Minneapolis & Manitoba	50.49
Chicago & Northwestern Railway	54.10
Chicago, Milwaukee & St. Paul	57.00
Chicago, St. Paul, Minneapolis & Omaha	59.02
Burlington, Cedar Rapids & Northern	68.11
St. Paul & Duluth Railway	77.68
Minneapolis & St. Louis	80.85
Minneapolis & Eastern	145.50

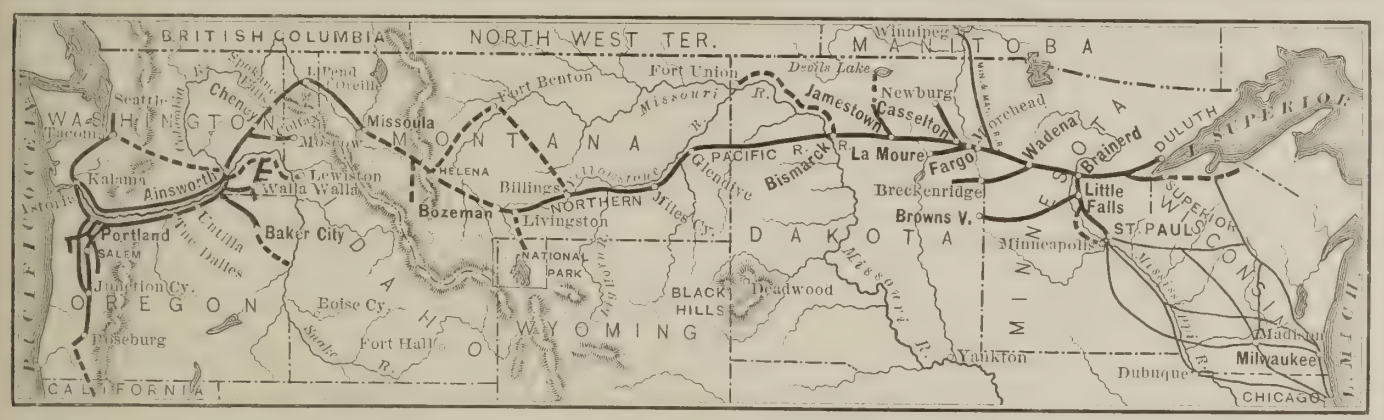
The average rate received per passenger per mile during 1881 was:

	Cents.
Northern Pacific Railway	3.91
St. Paul & Duluth Railway	3.53
St. Paul, Minneapolis & Manitoba	3.23
Chicago, Milwaukee & St. Paul	2.87
Minneapolis & St. Louis Railway	2.58
Chicago & Northwestern Railway	2.53
Chicago, St. Paul, Milwaukee & Omaha	2.43

The following table shows the average rate per ton of freight per mile carried on the respective roads for three years and the earnings, as follows:

	Rate. 1879. *cents.*	1880. *cents.*	1881. *cents.*	*Earnings.* 1879.	1880.	1881.
C., St. P., M. & O.	01.46	01.47	01.40	$1.98	$1.78	$1.97
C. & N. W. Railway	01.56	01.49	01.47	2.49	2.31	2.16
C., M. & St. P.	01.72	01.76	01.70	2.67	2.72	2.78
St. P. & P.	....	....	....	....	....	....
St. P., M. & M.	*	*	02.88	*	*	4.03
Northern P.	02.59	02.40	02.16	4.83	4.93	4.20
M. & St. Louis	*	*	*	1.03	1.25	1.37
St. P. & D.	*	*	*	1.47	1.37	1.28

* No record.



These figures, if not the various newspaper accounts of the progress attained by the Northern Pacific Railway during the past year, go far to draw attention to the last and third transcontinental line of railway, now approaching completion. With recently obtained data concerning the progress of construction of the railway just mentioned, an account of the opening of the northern tier of territories to the tourist and the immigrant by means of the comprehensive Northern Pacific system of railways, the character of the region through which it passes, and some facts concerning the workings and plans of the projectors of the road, are of immediate interest.

The northwestern states and territories beyond the Mississippi river possess great mineral wealth, a very good supply of the finest timber, and an immense extent of arable lands. In the Puget sound district—the area of which is nearly as large as the state of Iowa—the supply of fine timber standing is estimated at 157,500,000,000 feet. The salmon fisheries of Oregon and Washington territories are notable, the annual exportation of canned salmon amounting to over $3,000,000. Wheat is the staple agricultural product of the northwest, and its superior quality has made it famous in the grain markets of the world. The average yield of wheat per acre in Dakota, and in Washington and Oregon, has been given at 22 bushels; of oats and barley, 35; of corn, in localities where it may be profitably raised, 40; of rye, 20; of peas, 40; of beans, 36; of potatoes, 300.

Until 1869 the Pacific northwest was destitute of railroad facilities. Subsequently several interior lines were built, but the lack of main lines of transportation greatly retarded the growth of the entire region. During thirty years the extreme northwest increased no faster in population than did some of the newer western states in one year. The chartering by Congress of the Northern Pacific Railroad in 1864, and the construction operations carried on at both ends of its line in 1870 and 1871, gave fresh hope to the sparse and scattered population of that vast region. These hopes went under a cloud for a time after the panic of 1873, and the failure of Jay Cooke & Co., the financial agents of the road; but they revived when the company was reorganized in 1875, and rescued from bankruptcy by its bondholders becoming its stockholders and the owners of its franchise and property, and when, four years later, the work of building the road was begun afresh. Meanwhile, the Oregon Railway & Navigation Company, beginning as a small corporation owning a few steamboats, has grown into a vast transportation enterprise, with rail, sea, river and sound lines reaching all points of the Pacific northwest. This company has recently become an ally of the Northern Pacific under the joint presidency of Henry Villard, one company to form the present transcontinental trunk line, and the other to provide feeders and connections by land and sea on the Pacific coast. The act of Congress referred to above granted the right of way through the public lands, and in aid of construction gave to the company the alternate odd-numbered sections of public lands lying within twenty miles on each side of the line through the

states, and within forty miles on each side of the line in the territories. The company, organized under charter, endeavored to raise $100,000,000 by the subscriptions of a million individuals who were to take one share of stock each at par. This plan, being impracticable, failed. In 1869 and 1870 Congress amended the company's charter so as to authorize it to mortgage its road and land grant, and the firm of Jay Cooke & Co. assumed, under contract, the financial direction and control. They negotiated $30,000,000 of the company's bonds. The suspension of the firm in 1873 involved the speedy bankruptcy of the Northern Pacific. In the meanwhile, however, there had been completed and put in operation 555 miles of the road, extending from Duluth to Bismarck, and from the Columbia river to Puget sound. A reorganization of the company was perfected in 1875, but it was not until the year 1879 that the active building of the main line was renewed. During the past three years the work of construction has been vigorously pushed, the working capital of the company being furnished by a syndicate of bankers.

The estimated area of the public lands granted to the Northern Pacific is 42,000,000 acres. The lands comprised in the Pend d'Oreille division, in Washington Territory, a distance of 225 miles, and in the Missouri division, a distance of 217 miles, are subject to divisional mortgages. The general mortgage covers the entire main line and the Cascade branch.

It does not name a fixed and final amount, but is issued at the rate of $25,000 per mile of finished road only, and as fast as successive sections are accepted by the government. A reserve is made sufficient to cover the existing bonds on the Pend d'Oreille and Missouri divisions. The general mortgage bonds are secured by a first mortgage on the entire main line and branch, subject only to the prior liens on the two divisions above named. There is no other encumbrance. The bonds are also secured by a first mortgage upon the entire land grant of the company, with the exception of the lands east of the Missouri river, in Minnesota and Dakota, in payment of which the preferred stock is receivable, unless a default on the bonds occurs, in which case the bonds supersede the preferred stock. The unsold lands thus reserved amount to about 3,500,000 acres. The general mortgage bonds are receivable in payment of lands at 110 and interest. Cash arising from the sales of land is invested in these bonds, or they may be drawn for the sinking fund at 110 and interest. The bonds run forty years, at 6 per cent. per annum, interest semi-annual, payable (both principal and interest) in American gold coin. The proceeds of bonds are paid directly to the company, and applied to the work of building the road, without the intervention of any construction company or other agency. It is intended that the main line of the Northern Pacific shall be finished and equipped with the proceeds of the $40,000,000 general mortgage contracted for by the syndicate, and that its fixed charges shall not exceed the interest on them and the divisional mortgage bonds. The preferred stock of the company, receivable at par in payment for lands, as before stated, in case of a default on the general mortgage bonds, is receivable at 110 and interest in payment for the lands. This condition covers 426 miles of the line on which the preferred stock has a prior lien on the lands, but not on the road.

The outstanding indebtedness of the company to date is:

First mortgage 6 per cent. bonds	$25,506,000
Divisional 6 per cent. bonds	5,985,500
Total bonds	* $31,491,500
Preferred stock	41,909,132
Common stock	49,000,000
Total stock	$90,909,132
Total stock and bonded debt of road per mile	59,545

* In addition, $6,481,000 of the general first mortgage bonds are held in trust for the retirement of the divisional bonds.

The fixed charges are 6 per cent. on the bonded indebtedness, which is placed, as before stated, at $25,000 per mile. Consequently, on the above outstanding bonded indebtedness the fixed charges are $1,889,490 per annum.

The sales of land by the road from June 30, 1881, to July 1, 1882, were 468,321 acres, amounting to $1,721,300.

The earnings and expenses of the Northern Pacific for the fiscal year ending June 30, 1882, as compared with the previous year, were as follows:

	Years. 1881–82.	1880–81.	Increase. Amount.	Pr ct.
Gross earnings	$5,430,300	$2,994,500	$2,435,800	81.35
Expenses and taxes	3,572,800	2,025,300	1,547,500	76 40
Net earnings	$1,857,500	$969,200	$888,300	91.67

The ratio of expenses to earnings decreased in the year under consideration 1.84 per cent. The earnings and operating expenses from July 1 to September 30, 1882, compared with the same period of the previous fiscal year, were:

	1882.	1881.	Increase.
Gross earnings	$2,194,120.61	$1,333,368.69	$860,751.92
Operating expenses*	1,297,535.54	770,587.85	526,947.69
Net earnings	$869,585.07	$562,780.84	$33,804.23
Approximate gross earnings, October			834,360.00

* Includes rentals and taxes.

The total surplus earnings of the company from October 1, 1875, to June 30, 1882, with interest to January 1, 1883, amounted to $4,667,400. The plan of reorganization provides that holders of preferred stock shall be entitled to such dividends, not exceeding 8 per cent. per annum, as the surplus earnings in each calendar year may suffice to pay, and before any dividends shall be paid on the common stock. As the surplus earnings from year to year had, by concurrence of the stockholders, been used in the construction of the road, in September last the board of directors declared a dividend of 11 1/10 per cent. upon the preferred stock of the company, for which there were issued the obligations of the company bearing interest at 6 per cent. and dated January 1, 1883. These obligations are payable at the end of five years, but redeemable after one year, at the pleasure of the company, upon thirty days' notice, in amounts of not less than 20 per cent. to each holder.

The Northern Pacific's fields of operation may be briefly outlined as follows:

Minnesota, aside from its general carrying trade, is valuable to the Northern Pacific because of the cities of St. Paul and Minneapolis, the eastern termini of the road, and whose interests and rapidity of growth have heretofore been fully described. Seven counties in Minnesota contiguous to the Northern Pacific, and extending from the timber belt to the Dakota boundary, embrace an area of 4,885,000 acres, of which over 45 per cent. are forest lands, the remainder valley and prairie. In these seven counties the whole number of farms in 1881 was 6,367, an increase of 534 over the previous year. The total population at the present time is 53,400, an increase of nearly 30 per cent. since 1881.

Dakota Territory has an area equal to the combined areas of Ohio and Pennsylvania. The population has increased nearly 1,000 per cent. in ten years. By the census returns the population in 1880 was 135,180, against 14,181 in 1870 and 4,837 in 1860. The Indian element numbers 2,000. Fifteen counties in Dakota, lying near the Northern Pacific Railroad, and extending across the territory, comprise an area of 15,608,900 acres, of which 426,100 acres are under cultivation. The aggregate population in 1880 was 24,900. It is now 37,800, an increase of 12,900 in two years. The greater number of these counties are new, and seven of them have no agricultural settlements. According to the report of the United States General Land Office, of 15,699,848 acres of public land entered and disposed of during the year ending June 30, 1882, 4,568,909 acres, or nearly one-third, were taken up in the territory of Dakota alone, and of the total acreage of 6,347,729 taken up under the Homestead act, 2,187,415 acres, or more than one-third, were taken up in Dakota. The valley of the Red River of the North, lying in Dakota and Minnesota, has long been heralded as the most productive wheat region in the United States. The rolling prairies further west in Dakota are of almost equal fertility, and the farms recently opened on the hilly plateau, called the Coteaux, near Bismarck and Steele, show that extensive section to be excellent for small grains, root crops and pasturage.

A large part of the surface of Montana consists of rolling plains, covered with rich grass, and affording excellent pasturage. Cattle subsist on these pastures the year round. The stock business has become an industry hardly second in the value of its yearly results to the mining of precious metals in the mountain districts. There is space enough for its growth for many years to come. The cattle traffic has become of late one of the most important features of the Northern Pacific Company's freight business. Agriculture is very profitable in Montana along the valleys of the streams, where navigation is practicable. In the northwestern corner of the territory, reaching over into Idaho, is an extensive belt of valuable pine, cedar and spruce timber traversed for 150 miles by the road.

Montana contains within its limits more than 92,000,000 acres of land. The population increased from 20,595 in 1870 to 50,000 in 1881. The yield of the precious metals, from the few and confined districts in the extensive mineral belt of Montana which have thus far been partially developed, aggregated in the past three years more than $15,000,000. The valleys and basins of Montana available for farming comprise an aggregate area of more than 20,000,000 acres.

Washington Territory ranges from north to south from 200 to 250 miles, and from east to west about 360 miles. Its coast length is 245 miles, and its full shore line 1,738 miles. Its area is 44,796,160 acres. Exclusive of the area covered by the waters of Puget sound, and the mountainous region unfit for cultivation, there remains, probably, 35,000,000 acres. Of these 20,000,000 acres are timber lands, about 5,000,000 acres rich alluvial bottoms, and 10,000,000 acres prairies and plains. Of the latter a large proportion is well adapted to wheat culture, and all of it for stock raising. The population by the census of 1880 was 75,120, an increase of 51,170 over 1870.

Oregon, with its fruitful resources, numerous watercourses and harbor facilities, is a great auxiliary in the prosperous development of the Pacific northwest. Its full shore line is 285 miles. Its area is 95,274 square miles, or nearly 64,000,000 acres. The population, census of 1880, was 174,767; in 1870 it was 90,973, an increase of 83,794 during the decade.

The length of the entire chartered lines of the Northern Pacific railway is now about 2,466 miles, and officers of the road state that the system will ultimately include over 5,000 miles of railway. Of the 2,466 miles of main line and branches, 2,166 miles have been completed, leaving a gap of but 300 miles to be constructed to make the track continuous across the continent. The length of the line from St. Paul to Portland is 1,950 miles, of which 1,650 is finished. The officers of the company in New York stated a day or two since that there are now at work on this gap of 300 miles about 11,000 or 12,000 men, of whom two-thirds are Chinese. The gap is from a few miles east of Bozeman, Montana, to a few miles west of Missoula, in the same territory, about midway between which is situated Helena, the territorial capital. From Livingston, at the head of the Yellowstone valley, a branch will be built this summer 57 miles south to the National Park. None of the men employed in track-laying (for the Montana gap is all graded) are at work on the west coast. The forty-mile unfinished portion of the route there, south of Portland, will be completed at once upon the finishing up of that under way in Montana. Contrary to recently published statements in this city, the road is expected by its officers to be completed, so far as track-laying is concerned, by July 4 next, and trains are to be run on a regular time-card. The road is to be open to the public in September instead of October next, as recently reported. The company has about 5,000 freight cars, 60 passenger coaches, 20 baggage and express cars, 14 sleepers, and 250 locomotives. About 1,000 miles of road west of St. Paul and nearly 600 miles east of Portland are being operated. There are now being built for this road, by the Pullman Palace-Car Works, at Pullman, Ill., 50 first-class coaches, 37 second-class cars, 10 dining-cars, and 12 sleeping-cars. There are also being built 120 new locomotives in Philadelphia and Portland, Me.

The town of Tacoma, Washington Territory, north of Portland, and one of the western termini, promises to become an important point. Railway shops have been built there, a wheat elevator and capacious coal-bunkers are being constructed, and, as a Puget sound shipping and supply station, it is believed to be of great promise. One day in December last there were twelve large ships and five steamers at the wharves at Tacoma, where the harbor is excellent. The population of the place is now between 2,000 and 3,000, but it is growing, and no doubt is felt of its progressing much more rapidly after the completion of the road. The ships and steamers of the Oregon Railway & Navigation Company will run from San Francisco to Tacoma, as well as Portland, and from both points later to Alaska, with which region commercial intercourse will be opened by the company named. The third corporation interested in this great northern transcontinental enterprise is the Oregon & Transcontinental Company, which is now building the branch lines of railway tributary to the Northern Pacific system. In addition to the lines authorized by the government charter, the Northern Pacific has acquired an undivided half interest in the road between Thomson Junction, Minn., and Duluth; a controlling interest in the road between Brainerd, Minn., and Sauk Rapids; a leased line between Sauk Rapids and St. Paul, in all 160 miles, and, with the main line finished, 2,301 miles of railroad in operation. It also operates the Northern Pacific, Fergus & Black Hills Railroad, of which 115 miles have been completed; the Fargo & Southwestern Railroad, 44 miles completed; the Little Falls & Dakota Railroad, 88 miles completed, and the Jamestown & Northern Railroad, 38 miles completed. These branches will all be extended next year by the Oregon & Transcontinental Company.

The Oregon & Transcontinental, a corporation auxiliary to and the largest stockholder in the Northern Pacific, extends to the latter the support of its capital of $30,000,000. This has enabled the company to push construction throughout the past year. A prospective element of profit to the Northern Pacific as a finished line lies in the control, through the Oregon & Transcontinental Company, of the vast traffic of the comprehensive system of branch lines of railroad, and through the Oregon Railroad & Navigation Company, of ocean and river lines already developed in Oregon and Washington Territory by the latter. The latter tributary system covers over 1,200 miles of railroad, the navigation of three large rivers and the coast trade along the Pacific from Mexico to Alaska. The Oregon & Transcontinental Company has agreed to construct branches tributary to the main line in Minnesota, Dakota, Montana, Oregon, Idaho and Washington. The approximate gross earnings of the Northern Pacific Company, as published by the treasurer of the road January 18, 1883, have been as follows:

	1881–82.	1882–83.	Increase.
January 8 to January 14	$55,406.00	$95,061.00	$39,655.00
July 1 to January 14	2,881,801.60	4,584,776.89	1,702,975.29

The officers of the road state explicitly that they expect to be able to make contracts by next August and September for the direct rail transportation of emigrants to points in Idaho, Washington Territory, Oregon and north California.

THE DECEMBER CONSULAR REPORTS.

In the December number of consular reports Mr. S. B. Packard, United States Consul at Liverpool, presents some elaborate statistics relative to British imports of cattle, sheep and swine. During the years noted the British imports from the United States are given as follows:

	Cattle.	Sheep.	Swine.	Total.
1877	11,538	13,120	226	24,884
1878	68,450	43,940	16,321	128,711
1879	76,117	110,350	15,180	210,647
1880	154,814	66,722	12,549	234,085
1881	103,691	49,223	1,773	154,689

There was in 1881, therefore, a falling off of 51,121 cattle, 17,499 sheep and 10,776 swine. In 1880 the British imports of live stock from Canada numbered about 127,000, which in the succeeding year dropped to 110,898, a loss of about 16,000 head, or nearly 12½ per cent.; on the other hand, the reduced exports of cattle and other live stock to

Great Britain from the United States in 1881 amounted to 79,396 head, or about 34 per cent. of those going there in 1880. As indicated in the table printed above, the shipments in 1881, compared with those in 1880, amounted to about 66 per cent. on cattle, about 73 per cent. on sheep, and about 14 per cent. on swine. The total British imports of cattle and other live stock in 1881 from other European countries numbered 1,284,711, against 1,379,838 in 1880, a decrease of 95,127 head, or about 7 per cent., from which it may be gathered that the United States was a severe sufferer, as decreased cattle and live stock shipments from this country amounted to over 79,000 head out of the total of 95,127 less which Great Britain took as above in 1881. Canada and the United States, therefore, are responsible for practically the whole of the 95,127 shortage referred to. But the aggregate British imports of live stock, including those from Ireland and the Channel Islands, were, in 1881, 2,816,890, against 3,188,882 in 1880, a deficiency of 371,992 animals. The Channel Islands' and Ireland's quotas, therefore, are responsible for the loss of over 276,000 animals in Great Britain's imports of 1881, as against 95,127 from Canada and the United States. The totals by countries are as follows:

BRITISH IMPORTS LIVE STOCK.

	Cattle.		Sheep.		Swine.	
	1881.	1880.	1881.	1880.	1881.	1880
Europ'n countries	171,517	180,877	822,343	707,482	22,655	37,907
Canada	44,389	48,102	66,478	78,074	31	661
United States	103,093	154,814	49,223	66,722	1,773	12,549
Channel Isles	2,390	2,632	....	....	....	....
Other countries	203	6	10	1	....	....
Ireland	571,557	721,391	577,627	714,763	382,995	372,890
Totals	893,755	1,107,812	1,515,681	1,557,042	407,454	424,007

The loss on cattle, therefore, was 2,140,057 animals, on sheep 141,361 animals, and on swine 16,553 animals. No marked effect was produced in the price of meat by the falling off in the number of imported animals. Beef in 1880, in England, was on the average selling at 13c. per pound, and large prime 17c. per pound; mutton, second-class, 17c.; Southdowns, 20c. per pound; while in 1881 inferior beef was 13c., and the best quality 17c. per pound, and mutton 17c. and 20c. per pound.

The catching and curing of sardines has become a national industry in France, and some account of the extent of the operations in this direction have been forwarded by Consul Wilson, of Nantes. It appears that from 3,000 to 4,000 boats are employed in catching sardines, manned by 24,000 to 25,000 fishermen. There are about 200 factories, employing from 15,000 to 17,000 women and from 1,000 to 1,200 men, with 3,000 to 3,500 mechanics—tinners, carpenters and box-makers. In addition to the preparation of and canning sardines, these factories also preserve vegetables. The product of the canneries of late years and the value thereof is given as follows:

	Cases, 100 boxes each.	Value.		Cases, 100 boxes each.	Value.
1879	1,000,000	$10,000,000	1881	300,000	$2,520,000
1880	350,000	2,500,000	1882*	450,000	3,960,000

* Estimated.

The foreign commerce of France in sardines is reported as follows:

IMPORTS OF SARDINES.

	Kilograms.	
	1879.	1880.
Spain	220,174	543,614
Algeria	384,566	313,777
Other countries	4,665	10,240
Totals	609,405	873,631
Values, francs	1,218,810	2,271,441

EXPORTS OF SARDINES.

	Kilograms.	
	1879.	1880.
To Russia—Baltic sea	484,963	376,443
Black sea	350,197	192,026
Germany	1,234,882	721,522
Holland	405,052	*
England	7,476,826	4,701,887
Italy	382,262	178,897
Turkey	676,497	*
United States	1,644,668	1,755,757
Venezuela	301,339	326,234
Brazil	649,720	191,815
Argentine Republic	130,139	272,665
*All others	2,300,397	1,549,944
Totals	16,327,856	10,817,851
Values, francs	32,655,712	30,290,202

There is said to be a gradual but steady falling away in the supply of sardines off the French coast. This has been attributed to an alteration in the direction of the gulf stream in that region and to other and more remote causes. Recent investigation point to severe winter weather as the reason.

The French tribunal of commerce is described by Consul Rhodes, of Rouen. It is composed of a president, judges, assistant judges and a clerk, and is a business court for the speedy and equitable adjustment of differences, by which are avoided the delays and technical legal difficulties usually accompanying trials in an ordinary court of law. The judges are elected by an assembly of the principal merchants of the town. Every merchant is eligible to the place of judge or assistant judge who is thirty years old and has been honorably engaged in business for five years and who has not failed in business. Those who have effected a compromise in the settlement of their debts are excluded from a seat in the tribunal. The president of the tribunal must be forty years old, and be taken from among the former judges. The judges, after election, are confirmed and instituted by the chief of the government. The term of office is for two years. The president and judges may be elected for two consecutive terms, at the expiration of which an interval of one year must elapse before they again become eligible. The clerks are appointed by the President of the republic. The proceedings of the tribunal of commerce have been characterized by simplicity and good sense, and although it has once in a while slightly erred as to the law (which can be rectified by the superior courts), it seldom or never does as to equity. Its reputation in the latter way renders it a popular court for fair-minded litigants.

Consul Shaw, writing from Manchester, takes pleasure in reporting that complaints concerning the alleged adulteration of American cotton sent to England have almost entirely ceased. This result he attributes to the widespread discussion of the subject, which brought to the attention of cotton men the importance of exercising the greatest care in ginning, grading and packing cotton. Referring to the Manchester cotton industries, Mr. Shaw adds that the business with them during the past year has not been as good as was freely predicted early in 1882. Competition in the Manchester market has been keen, and as a result prices have ruled low and production has exceeded the demand. It is further stated that many Manchester cotton manufacturers are quite despondent. Sales of cotton yarn there are slow and the margin of profit is small. Business in yarns is said to be even worse than in 1879, when it was necessary to reduce the wages of operatives 20 per cent. The Egyptian war depressed those who use Egyptian cotton, the fear being that the usual supply could not be secured. This led to large purchases of American cotton, and free purchases forced up the price. The price of yarn did not equal the increased price paid for cotton. The close of the war has been reassuring, but low prices for yarn, as compared with the price of raw material, make spinners feel the severest pressure in working their mills under present conditions. Mr. Shaw concludes that "growing competition abroad is the chief source of danger" to Manchester manufacturers, as every new mill erected in foreign countries has a direct influence on the demand for English manufactures. This sort of competition is said to be more keenly felt in England at present than in a long time.

Consul Peixotto, at Lyons, France, always writes interestingly concerning silk raising and silk manufacture. He has lent his valued services to the officers of the New York and other silk associations in this country in keeping them informed of the state of foreign silk markets and in otherwise co-operating with them to develop sericulture in this country. In a note in the last consular report, as demonstrating the growing importance of silk manufacture in the United States, he states that for seven months of 1882 (ending July 31) there was large increase in the export of raw silk from Lyons, France, to this country. The total value thereof was 5,423,076 francs, an excess of 1,852,216 francs over the value of seven months' shipments in 1881, and of 4,514,323 over 1880. He, therefore, "with pleasure," announces the success of "our young countryman," Mr. Edward W. Serrell, Jr., in the discovery and successful application of automatic machinery to the reeling of silk. He hopes to soon present an extended report. One obstacle to successful silk culture in this country has been the difficulty of reeling it. In order to overcome this, the New York Silk Exchange proposed to import some French reelers. Mr. Serrell's invention promises, if as successful as reported, to revolutionize the silk industry. It has been patented in all countries.

JUTE CULTIVATION.

The prospects of the successful cultivation of the jute plant in certain favorable localities in this country have from time to time been discussed in the press, and considerable interest has been manifested in the subject. A practical treatment of the question was given before a convention of persons interested in the future of jute culture, recently held at Jackson, Miss., by Mr. C. Menelas, of Brookhaven, Miss., who has devoted considerable time to the care of the plant, and whom the New Orleans *Times-Democrat* describes as the father of jute culture in the United States. Jute was described by Mr. Menelas as an annual plant cultivated principally in Bengal, where it grows from seven to fifteen feet high, with a stem from one to two inches in diameter, tapering gradually and branching towards the top. The bark consists of a fine fibrous substance, which is used very generally in making various kinds of paper, cloth, bagging, matting, carpets and ropes, being much mixed with cotton, woolen, and even silk goods. The progress of jute cultivation in Bengal was illustrated by a comparative table of the exports from Calcutta to Great Britain, France and the United States for twenty years from 1860 to 1879. From the figures given by Mr. Menelas it appears that the exports increased from 322,996 bales of 400 pounds each, in 1860, to 1,578,667 bales in 1879. Since the statistics referred to were compiled it appears that the crops have continued to increase at a still larger rate. Mr. Menelas estimated the crop of 1882 at nearly 2,500,000 bales, and said that the crop of 1883 promised to reach 3,000,000 bales. Notwithstanding this large increase the consumption seems to keep pace with the production. In India a large part of the jute produced is used in the manufacture of gunny-cloth and the other substances mentioned above, and much of the manufactured article finds its way to various parts of Asia, Europe, Australia and America. As to the money value of the manufactured articles, the speaker admitted his inability to give exact or even approximate figures. That it was very considerable, however, was, he said, apparent from the fact that every bale of cotton exported from the East Indies required from six to seven yards of gunny-cloth, that the immense quantities of linseed, rape-seed, poppy, teilseed, wheat, rice, sugar and saltpetre exported were sent in sacks made of jute, and that indigo, silk, opium and numerous other articles were covered with cloth made from the same plant. In view of these facts he was led to believe that the annual productive value of the jute industry greatly exceeds $100,000,000. The value of the raw and manufactured jute imported to the United States he estimated at over $10,000,000 annually. This item, he thought, could be easily saved to the country in a few years if an intelligent effort were made to raise the plant. Our need of that article, he said, is now enormous and is constantly increasing. It is needed for our large cotton crop of between 6,000,000 and 7,000,000 bales, each bale of which requires about seven yards of 2 to 2¼ pounds to the yard. It is wanted also for our breadstuffs for shipment to Europe, and for various other purposes.

In regard to the questions whether in this country there is to be found a soil, climate, etc., suitable to the growth of jute, and whether the planters here can compete with the cheap labor of India, Mr. Menelas expresses himself with great confidence. As respects our soil and climate he says that we could not wish for more favorable conditions. Of course he speaks mainly with reference to the southern states. His experiments during the last four years, he says, have enabled him to state positively that jute grows in the southern states as luxuriantly, if not more so, than in India. Coming to the point of the relative cost of labor here and in India, he admits that the question seems to be surrounded with serious difficulties, and that, if the American agriculturists had to depend upon manual labor, those difficulties would be almost insurmountable. But the problem is seen to have a different aspect when we reflect upon the extent to which machinery has been called in to aid the labor of the individual. In connection with the manipulation of the jute plant, Mr. Menelas mentioned a decorticating machine which he said was likely to revolutionize the preparation of jute. In order to show how distance, cost of transportation, etc., told in favor of the American planter and manufacturer, he laid before the convention an invoice of 1,000 bales of jute from Calcutta to New York, from which it appeared that the total charge of transportation, duty, etc., from Calcutta to New York amounted to over 47½ per cent. of the cost of the material itself. This did not, of course, include the charges and expenses from New York to the place where the jute was manufactured into goods. This illustration, the speaker thought, was conclusive as to the advantage possessed by this country over India, considered as a competitor with her in raising jute for consumption here. He earnestly advocated the introduction of jute culture in the south, saying that the prosperity and development of that section depends almost wholly upon diversifying the crops and promoting new industries there. He adds that no crop requires less care than that of jute, and that in three months and a half it is converted from seed into fiber. It stands the drouth as well as it does the wet, and has no enemies either in worms or any kind of insects. Jute also matures and brings in money much earlier than either corn or cotton.

The speaker then gave some directions as to the preparation of the soil, and the planting, care and manipulation of the plant. In regard to the yield of the plant per acre he said that various statements had placed the production at from 800 to 3,500 pounds per acre, but stated that, while not inclined to refute these calculations, he did not feel justified in encouraging planters to rely on such a maximum. He thought that to begin with 1,500 to 2,000 pounds of fiber per acre was an excellent yield. This, at five cents per pound, would produce from $75 to $100 per acre; a very good result, he thought, in view of the fact that jute is a plant that requires less work than corn, and which in four months can be turned into money, besides being perhaps the safest crop to raise. Concerning the cost of raising jute, the speaker did not hesitate to state, from his own experience, that jute fiber ready for the market could be produced at from two to two and one-half cents per pound, according to the fertility of the soil and the care bestowed upon the crop.

OCCASIONAL NOTES.

In a summary of the British Board of Trade's wreck register, some time ago, we showed that, in spite of the efforts of the life-saving service and of the presumed improvements in navigation and in the equipment of vessels, the number of shipwrecks on the coasts continued to be very large, and apparently displayed no tendency to diminish. The recent wreck of the Cimbria and the terrible loss of life involved have drawn public attention to the subject again, and have invested it with a deep and melancholy interest. The catastrophe referred to resulted from a collision in a fog. Perhaps the most noticeable feature in the record of marine disasters of late has been the number of collisions that have resulted in wrecks. This is somewhat strange. While it might be conceded that there can be no immunity for the works of man's hand in the overwhelming storms that from time to time visit the seas, it was surely to be expected that some appreciable increase of security should be apparent in directions in which human skill and ingenuity find or should find a special field for their exercise. This latest disaster is only another illustration of the humiliating fact that, notwithstanding the progress of the age in maritime machinery and appliances, no effectual means of avoiding the dangers of fog has yet been devised. The fog-horn, as at present used, has been often and fatally shown to be inadequate, and it appears to be generally agreed that the problem of fog signalling is yet to be solved.

A pertinent fact brought into relief by the wreck register referred to above was that much the greatest loss by shipwreck occurred off the east coast of England in a part of the very sea or channel in which the Cimbria was lost. The question suggests itself, in view of this fact, whether, by means of a convention or otherwise, the authorities of the bordering countries should not insist upon the enforcement of rules regulating more clearly and more thoroughly than has hitherto been done the rate of speed and the management of vessels in that sea, especially in cases of fog. Still another fact brought into light by the accident to the Cimbria is that the boats carried by her were entirely inadequate to the task of receiving the passengers even if they had been safely launched. According to some reports, they were unable to contain one-third of the whole number of passengers. This is a matter that would seem to call for investigation. If the boats are intended as a refuge in case of shipwreck they should be numerous and commodious enough to contain the whole number of passengers and the crew carried by the ship, or some other appliances adapted to the same end should be provided. If they are not intended for the safety of the passengers that fact should be made known, and a lingering delusion removed from the minds of ordinary people.

The extreme cold weather in the west has been causing uneasiness, not to say alarm, among the cattle men. Some of the prognostications as to the probable effect of the cold wave on the stock are depressing enough. Of this character, for instance, is the opinion to which the Chicago *Tribune* gives utterance. That journal expresses the fear that the cold will cause a disastrous loss of cattle on the plains, and adds that a serious loss of cattle would result in dear meat for a year to come. It is perhaps too early to pronounce upon the matter as yet, the reports in regard to the damage to stock on the plains being conflicting, but there appear to be grounds for hoping that the case is not so bad as seems to be feared by the *Tribune*. In cases where the stock were unsheltered or where they had already been shipped and had to encounter the "blizzard" while on the cars—being snowed in in some cases—there had undoubtedly been much suffering. But it is also certain that the stockmen learned a severe lesson by their experience of two years ago, and that they are now much better prepared for cold weather than they were then. Where food is

abundant, too, as is generally the case, the animals can withstand great extremes of temperature. Indeed it is noticeable that the greatest suffering has been among very young and sickly cattle. The chief effect of the snap will be to cut off, or at least very much diminish, arrivals while it lasts, since, of course, shippers will, wherever possible, hold their cattle back until the weather moderates. What the result will be in case the severe cold is protracted for a considerable time cannot admit of much doubt; it seems clear that it must necessarily occasion very severe losses, and perhaps to such an extent as to seriously affect prices.

Prohibition has again become an issue in Iowa in consequence of the recent decision of the Supreme court of that state declaring the constitutional amendment ratified in June last unconstitutional. The decision is based upon a technicality, proceeding upon the ground that certain verbal differences exist between the joint resolution agreed to at the session of the general assembly at which the proposed amendment was first introduced and the amendment as finally ratified by the electors. In short, the conditions laid down in the constitution of the state for its own amendment were not complied with to the letter, and the court took the view that in a matter of such vital importance as the amendment of the constitution the provisions therein laid down should be rigidly observed. Some well-informed and influential western journals are of the opinion that it will be difficult to induce the people of Iowa, in view of the experience in the neighboring state of Kansas, either to elect legislatures which will vote to submit a prohibitory amendment, or to adopt one by popular vote if it should be passed in two consecutive general assemblies. Such is the opinion of the Chicago *Tribune*, which remarks that the prohibition tidal wave was at its flood when the amendment was first introduced in the general assembly. It says that tens of thousands voted for its adoption who neither sympathized with it nor believed in the possibility of its enforcement, and asserts particularly that numbers of Democrats voted for the amendment who thought they saw an opportunity to make partisan capital by throwing the responsibility for its adoption on the Republican party, that party having been largely in the majority in both legislatures which agreed to the joint resolution. The *Tribune* adds that the tide of coercive teetotalism is on the ebb, and that it will be some time before the friends of prohibition will again have an opportunity like that of which they have failed to avail themselves through their negligence.

The discontent with the telegraph-pole system seems to be spreading steadily. The St. Paul and Minneapolis *Pioneer Press*, commenting on the veto by the mayor of Minneapolis of an ordinance permitting a telephone company to put up additional wires and poles in that city, says that the question brought into prominence by the mayor's action is one which must, sooner or later, be confronted in all cities and disposed of in accordance with the higher interests involved in the protection of the public against the hazards and inconveniences arising from the network of wires now rapidly becoming a dangerous nuisance in all considerable towns. The *Pioneer Press* points out that the telephone and electric light wires (not to mention the absolute danger arising from contact with the latter) have largely contributed to the obstructions involved in the pole system, and have complicated the difficulties inherent in it. It declares that the time has come when it is felt to be the clear dictate of duty that the authorities consider what should be done about the evil and provide the remedy. The *Press* refers to the experience of certain German and European cities in the use of underground cables, a topic which has heretofore been elaborately discussed in BRADSTREET'S, and urges that since the experience of those cities has demonstrated that wires can be profitably laid and efficiently operated beneath the streets the compulsory introduction of the underground system should not be regarded as a hardship here.

A correspondent of the *Mexican Financier* calls attention to the great quantity of precious woods which he declares exists in Mexico. He says that from the frontiers of Guatemala to those of the United States there is a vast domain whose growth of cabinet woods he describes as truly enormous. Among the varieties of woods which figure most prominently in the districts along the Pacific and gulf coasts he instances mahogany, ebony, rosewood, ironwood, sandal and aloe woods and cedar. Concerning the last-named wood he says that the Mexican variety, in addition to its rich aroma, possesses a grain so fine as to make it superior to many of the fine woods generally used in the markets of Europe and of the United States. The only use hitherto found for this wood, the writer continues, has been in the manufacture of cigar boxes. He adds that, in burning lime, he has used for fuel rich woods which could have been sold for good prices if known in the American markets. The *Financier* confirms the statements of its correspondent in relation to the growths along the coast, and adds that in the greater altitudes hickory, hard cedar, pine, larch, oak, sycamore and walnut flourish to perfection. It states that the rapid advance of railroads is daily making those supplies more available, and that for the encouragement of this industry the various state governments, as well as the general government, are offering liberal concessions to all who will utilize and further develop the lumber resources of the country. The *Financier* calls the attention of American capitalists to the matter, saying that there is a large demand in Mexico for ordinary grades of lumber, and that the Americans are not only large consumers, but also important exporters to Europe of the finer varieties of woods. These latter, the *Financier* concludes, can be had in Mexico in any desired quantity and variety.

The interesting fact is noted by the Manchester *Guardian* that the tendency to higher rates of discount, which has been a feature of the past few years in the chief monetary centers of Europe, was maintained during last year. The *Guardian* extracts from a Brussels publication the following table, showing the averages at each of the chief centers for the past two years:

	1882.	1881.		1882.	1881.
London	4.12	3 47	Brussels	3.98	4.14
Paris	3.69	3.93	Berlin	4.53	4 15
Vienna	4.21	4.00	Frankfort	4.53	4.46
Amsterdam	4.38	4.00			

It appears that the average for the year 1882, taking in the rates each month at all the chief centers, was 4.21 per cent. as against 3.92 per cent. for 1881, 3.46 per cent. for 1880 and 3.35 per cent. for 1879. As will be seen from the table given above, the average rate at Paris was lower than at any other center. The market there was very stringent during the first two months of the year, but the rate declined in March, and since the end of that month remained at 3½ per cent. Concerning the London market, it is remarked that the rate there fluctuated between wider extremes than those reached by any other center in the list. It was high during the first quarter of the year, rising higher than even the French rate. During the spring and summer months it sank below that of any other center, but after September again it rose as high as that of any other center in the list, and above the rates at Paris, Amsterdam and Brussels. The Vienna rate, it is noticed, remained very steady, maintaining the same uniform level as in 1881, 4 per cent., until October, when it rose to 5 per cent., at which level it continued to stand during the remainder of the year.

According to recently published official abstracts the gross produce of the revenue of the United Kingdom for the twelve months ending December 31, 1882, was £86,344,848, as against £86,682,179 in 1881, showing a net decrease of £337,321. The main items showing an increase were customs, £164,000, stamps (excluding fee, etc., stamps, which are included under miscellaneous), £200,711, the post office, £285,000, and miscellaneous (including fee, etc., stamps), £259,036. The heaviest items exhibiting a decrease were the excise, £144,000, and the property and income tax, £1,186,000. The net decrease fell in the quarter ending in March, 1882; the succeeding quarters all show a net increase. The returns for the last nine months of the year exhibit a net increase of £522,576. In the June quarter there was an increase over the corresponding period of 1881 of £217,788. The increase for the September quarter, in 1882, over the corresponding quarter in 1881, was £233,200, while the increase for the last quarter was only £78,588. This falling off is mainly due to the decrease in "miscellaneous receipts."

The *Economist*, in commenting upon the returns for the concluding nine months of 1882, remarks that, although the increase in the receipts, as compared with the corresponding period of 1881, is not much of a growth, yet that it is about as great a growth as in the present condition of trade could reasonably be hoped for. In spite of the fact that the rate of progress appears to have slackened during the last three months this very sound and conservative journal is of the opinion that better results will be achieved before the close of the financial year. The apparent slackening referred to, the *Economist* points out, was not in reality a retrogression. The change, such as there was, was due almost entirely to fluctuations in the "miscellaneous receipts," which, after showing an increase for the three months ending in September, showed a decline in the last quarter. But these receipts, the journal mentioned says, come in very irregularly, their variations from quarter to quarter are regarded as of little importance, and afford neither a proper indication of the state of the revenue as a whole nor even a trustworthy indication of what the income under this head alone will amount to at the end of the year. When the financial position is being considered, therefore, they may very well be left out of view.

In regard to the dwindling of the receipts on account of excise, the journal mentioned remarks that in one of its aspects it is not a matter of regret. The national expenditure on alcoholic liquors, it thinks, might with advantage to all be largely curtailed, and that in so far as the failing of the revenue is attributable to the spread of temperate habits, it is a thing to be welcomed, not deplored. It cannot agree with those who express apprehensions as to the result of such a change, and who seem to think that the British people cannot enjoy financial prosperity unless they drink themselves into it. The attitude it antagonizes, is, of course, not in any sense an intelligent one, since every pound saved from expenditure in luxury is a clear gain to the country, and to that extent will enable the necessities of revenue to be more easily borne. The question as to the deficiency, if any, and as to how to overcome it, is surely, as one would think almost everybody must perceive, one of adjustment merely, to be dealt with by the finance minister. The *Economist*, however, considers it as yet premature to speak as if a permanent diminution of the revenues from malt and spirituous liquors were an assured thing. It suggests that the question remains yet to be determined whether the present abstinence is not an enforced one, and whether the will to spend money does not still exist, the ability only being wanting.

In our last issue we gave some figures illustrating the condition of the Russian finances. The showing made by these statistics was very unsatisfactory indeed, and in a country where much attention was given to the details of revenue and expenditure would be regarded as alarming. A situation in which the expenditures are constantly mounting up, and the revenue shows a tendency to decline, is certainly such as to suggest a feeling of the most lively concern, even beyond the boundaries of a country so circumstanced. Considerable speculation has been indulged in as to the causes of the excess of expenditure over revenue. There can be no doubt, as we showed last week, that the increase in the expenses of the state has been owing in varying degrees to the growth of the army and the navy, to the weight of the debt contracted in the Russo-Turkish war, and to the rapid extension of railway construction in the empire. So far as to what may be called the positive aspect of the excess of expenditure complained of. As to the negative side of the excess—the decrease in revenue—the causes do not lie so much on the surface. Much of it is attributed to the extravagance and dishonesty which are said to disgrace the Russian official system. Some apparently well-informed observers are of the opinion that the excess is due in a still larger degree to a decline of agricultural production.

The English journal, *Land*, points out that the staple industry of Russia is agriculture, and calls attention to the fact that throughout Russia agriculture is falling back. The "black soil," the fruitful soil of the south, it says, is exhausted by scourging, and the poorer soil of the north requires a greater expenditure of capital before it will repay the enhanced cost of working. The picture given of the position of the landed proprietors, and of their relations with the agricultural laborers, indicates a highly depressed and unsettled state of affairs. The estates of the rural nobility, it is said, are offered for sale in hundreds, for the reason that they are not capitalists, and their land cannot be properly cultivated without the expenditure of considerable sums. The laborers are asserting their independence, and are able to combine more readily than in England, owing to the existence of the communal system. They are described as ignorant and insubordinate, but they are apparently not lacking in a certain short-sighted cunning, for in hiring themselves out they bargain for payment in advance, and desert the landlord at harvest time, leaving him, cheated of money and labor, without redress. Troubles beset him at every stage. Even where he has contrived to retain his laborers he is often forced to see his corn rot in the stacks for want of barns. The defects of the railway administration contribute their share to the farmer's distress. The causes of the very unsatisfactory condition of things *Land* finds in the communal system, which effectually prevents the application of capital to the soil; the improvidence of the peasantry, resulting in great part from the inordinate taxation to which they are subject; the ruinous burden of the Russian official system, and the protective system, which, by attracting capital to the favored manufacturing industries, deprives the soil of the resources which, in the ordinary course of things, would flow toward it.

A number of gentlemen, most of them practical farmers, assembled in the city of New York and organized the "Second Ensilage Congress," electing as their president Mr. Francis Morris, of Baltimore, who, it appears, was the first man to build a silo or fodder-pit in this country. One feature of the exercises of the congress was the unveiling of a bust of Auguste Goffart, the French inventor of the system. Mr. Alfred A. Reid declared himself a thorough believer in the virtues of ensilage. He said that he had ensilaged clover, rye and grasses, as well as corn, but found that corn made the best ensilage. The Rev. Mr. Ormiston said that cattle prefer it to turnips or dry fodder, and that the milk of the cows seemed to be improved by it instead of being injured. The only question with him was whether it produced as good beef, and that he was experimenting to find out. Mr. J. T. Smith, of Doylestown, Pa., was enthusiastic in his praise of ensilage as a food for cattle, and said that it made as good beef as any produced. Some statements made by this gentleman would seem to indicate that the dairy industries would be materially changed in many features by the introduction of the ensilage system. He said, for instance, that he had made butter for 63¼c. per pound, which has afterwards been retailed in this city at 57c. This he was enabled to do by the use of ensilage. The figures given in relation to the cost of ensilage differed widely, varying from $2 to $6.25 per ton.

At the second session of the ensilage congress Mr. Le Grand B. Cannon, of New York, gave some information from his experience, which had mainly been confined to the employment of ensilage in fattening cattle. Cattle fed on ensilage cost less for sustenance than those fed on hay; their gain in weight was greater, and their improvement in condition was much more marked. Mr. O. B. Potter thought that silos under ground were superior to those built above ground. Mr. Benedict, of Holyoke, Mass., remarked upon the particular adaptability of ensilage as food for hogs. Mr. Linsley, of Morris County, N. J., said that the milk of cows fed on ensilage improves very materially both in quantity and quality. In regard to the question as to the best material for making ensilage, Mr. W. H. Truslow gave his opinion in favor of corn; he said that he had tried sorghum, but that he had found the rind to be tough and sharp and disagreeable to the cattle; clover, he thought, contained too much nitrogen to make good ensilage. The congress, before concluding its session, adopted a resolution urging the universal adoption of the system of ensilage by the farmers of the United States.

SPECIAL CORRESPONDENCE.

LEGISLATION AT WASHINGTON.

Washington, January 25.—The prospects of the enactment of a tariff law by this Congress have not increased during the week. The progress in the Senate has been slow, but enough has been accomplished to make it very clear that the Democrats, as a whole, will oppose the bill, and that there will be but few in that party who will support it. The defections from party discipline this week have been on the Republican side, Plumb and Ingalls, of Kansas, McDill, of Iowa, and Van Wyck, of Nebraska, having voted to put certain of the rougher grades of lumber on the free list. The radical differences between the strictly agricultural states and the manufacturing communities have seldom been more sharply defined. Aside from this reduction in the lumber schedule, there have been no material changes in the bill reported by the Senate Finance Committee. There is undoubtedly to be a very hard struggle over the sugar schedule, and no one is willing to predict what the result will be. The refiners have not been able to agree upon any rates, and until they do it is not to be expected that Congress will. The presence of Claus Spreckles in Washington has given rise to a great many rumors as to the probable legislation on sugar, but the theory of one man is as good perhaps as that of another. The best opinion is that neither of the bills reported by the committees in the two houses will be passed. If there is to be any

legislation upon the tariff it is more likely to be in the form of legislation in conference committee, or the passage of a measure in the closing days of the session making a horizontal reduction of a certain per cent. Some of the best informed men in both parties and in the two houses are still of the opinion that there will be no tariff legislation by this Congress. The probable action in the House cannot be determined or anticipated until there shall have been several votes in the committee of the whole. Even Judge Kelley is not willing to make any prediction as to the probable fate of his bill until he has had an opportunity to test the temper of the House by some important votes. There will probably be more animated debate in the House in opposition to the bill than in the Senate, and the percentage of Republican opponents to the bill in the House will be larger.

The Tariff bill is the key that is to unlock the door to all other legislation, and, as long as the fate of that measure is in doubt, no one may venture to forecast the result as to other bills. Everything is subordinated to the tariff, except the necessary appropriation bills. Almost every hour of the day—and the sessions are protracted to an extraordinarily late hour—is occupied with this subject. The managers of the Bankruptcy bill have some hope that it will be possible to bring up that bill and pass it in the little remnant of time—possibly half an hour each day—which the Senate is willing to devote to any other subject than the tariff. But the hope, even as to the passage of the bill in the Senate, under such circumstances, has not the best foundation, while the most earnest friend of the bill in the Senate will hardly claim that there is much chance of the passage of the bill by the House.

The other measure which is being pressed with the greatest vigor—which, indeed, has more persistent advocates than almost any other bill—is the "Bonded Spirit bill." This bill is of the greatest importance to the distilling trade in Kentucky, Ohio, Illinois, and some other states, and is, perhaps, of even greater interest to the banks which have advanced a great many millions of dollars on the warehouse certificates. There is little chance that this measure can be taken up for action before the middle of February. Certainly it cannot make any progress until the Tariff bill shall have been disposed of. Those who are pressing this bill for passage say that these distilled spirits have been hypothecated to the extent of at least $40,000,000, and that some of the banks which hold these securities will be seriously embarrassed if the bill shall fail.

THE BUSINESS SITUATION AT CHICAGO.

Chicago, January 23.—The extreme cold weather of the past week or ten days has been adverse to nearly all branches of business. The jobbing houses, who at the opening of the month felt encouraged at the improved trade outlook and increased collections from the country, report a material diminution in sales of goods, while collections show a corresponding decline, and houses not possessing sufficient financial resources of their own with which to meet their obligations regardless of country collections—and there are very few that are in such an enviable condition—are increasing their requests for bank favors. The uncertainty regarding the action of Congress on the tariff question is also a disturbing element to both merchants and manufacturers. The tobacco and cigar trade also complain at the inaction of Congress regarding the tax on those articles, as they say that interior retailers will not buy except in small lots to cover their current wants until the question as to the internal revenue tax is definitely settled. Jobbers, manufacturers and wholesale grocers, who handle such goods, say they care very little whether the tax is removed or not, but they want the question immediately and definitely settled one way or the other. The failure of a large grocery house on Monday was not wholly unlooked for by the best-informed houses in the grocery trade, as the concern was known to be weak for more than a year, and 1882 was an unprofitable period with the trade, only such firms as were able to discount their purchase bills being able to make more than expenses; hence it was known that the now suspended house was gradually dropping behind, and those who gave it credit did so with reservation. Still, the failure has caused an uneasy feeling in the wholesale trade, as those in other branches of business fear that the ball once started may strike others ere it stops. It is generally thought, however, that as a rule Chicago wholesale houses are in a solvent condition, and it is hoped that no more failures will occur. But the weather during the past fortnight has heen very trying on those houses who are not ironclad, and unless a speedy change for the better occurs it will not be surprising if more failures are reported. It is proper to state, however, that the weather, which is so adverse to general trade, is good for heavy woolens and rubber over-goods, and houses handling such lines are doing a large trade. Heavy clothing is also selling fairly.

LEGAL NOTES.

In the important constitutional case of the United States vs. Harris et al., recently (January 22) decided by the Supreme Court of the United States, that learned body takes a somewhat different view of the powers of Congress from that heretofore entertained by a long dominant school of political commentators. It appears that in 1877 four citizens of Tennessee, while under arrest on certain criminal charges, were attacked and maltreated by an armed body of men, of whom the defendant was one. An indictment was found by the grand jury against the defendant and his associates, charging them with conspiracy to deprive the four prisoners above mentioned of the equal protection of the laws of Tennessee and of their right to be protected from violence while under arrest. The indictment was found under section 5,519 of the Revised Statutes of the United States, which enacts, in effect, that if two or more persons in any state or territory conspire to deprive any person or persons of the equal protection of the laws, or of equal privileges and immunities under the laws, or for the purpose of preventing or hindering the constituted authorities of any state or territory from giving or securing to all persons within such state or territory the equal protection of the laws, each of such persons shall be punished by fine or imprisonment, or both. The defendants demurred to the indictment on the grounds that the offenses created by the section referred to were not within the jurisdiction of the United States courts, but were cognizable by state courts only, and that the section was unconstitutional. The judges of the Circuit Court were unable to agree and certified the question to the Supreme Court for a decision. In the Supreme Court opinion Mr. Justice Woods declared that every valid act of Congress must find in the Constitution some warrant for its passage, and that the court was unable to find any such warrant for the enactment of the section in question. He reviewed all the parts of the Constitution that can be considered as bearing, even in the most remote degree, on the question in controversy, and showed that none of them authorized the passage of section 5,519. The fifteenth amendment, he said, concerned only the right to vote; the fourteenth amendment and the second section of article 4 referred to state action exclusively. There remained only the thirteenth amendment, which provided that neither slavery nor involuntary servitude, except as a punishment for crime, shall exist within the United States. The court thought that this amendment did not warrant the enactment of the section under review, for the reason that the law covered cases both within and without the provisions of the amendment. The result of holding the section to be authorized by the thirteenth amendment would be to accord to Congress the power to punish every crime by which the right of any person to life, liberty, property or reputation is invaded. A construction of the amendment which would lead to such a result the court considered clearly unsound.

A decision of much interest to marine insurers was also rendered by the Supreme Court on the 22d inst., in the case of the Sun Mutual Insurance Company of New York vs. the Ocean Insurance Company of Portand, Me. The Sun Company, it appears, reinsured a risk originally taken by the Ocean Company upon property on board a ship chartered for a voyage from New York to San Francisco. It was alleged by the Sun Company, in the court below, that the Ocean Company, in obtaining the reinsurance, concealed some facts relating to the extent of the charter of the ship, and it was urged, in behalf of the Sun Company, that it was not liable as reinsurer for loss which had occurred. The court below held that the policy was not void because of any concealment of the Ocean Company. The Supreme Court reversed the decision of the court below, holding that the concealment of material facts, whether intentional or inadvertent, avoided a policy actually intended to cover the risk for which a claim was made. In respect to the duty of disclosing all material facts, the court holds that the case of reinsurance does not differ from that of an original insurance, and that the duty of communication is independent of the intention, and is violated by the fact of concealment, even where there is no design to deceive, and this duty may, in some instances, be greater and more binding in a case of reinsurance than as between the parties to an original insurance. In the former, the party seeking to shift the risk he has taken is bound to communicate his knowledge of the character of the original insurance, where such information would be likely to influence the judgment of an underwriter, while in the latter the party is not bound, nor could it be expected that he should speak evil of himself.

In an opinion filed January 9, 1883, O'Neill, executor, vs. O'Neill, the Supreme Court of South Carolina held that, although a due bill found among the papers of the plaintiff's testator after his death, and which had never been delivered, was not of itself sufficient to establish the validity of a claim for the payment of the amount of the bill, yet, that the fact that such a paper was found, taken in connection with other facts consistent with the idea that the paper was regarded by him as the evidence of a valid obligation—as, for instance, that the due bill was annexed to a written request to the testator's brother to pay the amount of the bill, was to be regarded as furnishing evidence of a legal liability.

The *Reporter* contains a case which illustrates and enforces the doctrine developed in our recent review of Mr. Aroni's monograph on "Futures." In this case, Murray vs. Ocheltree, decided by the Supreme Court of Iowa, in October, 1882, the defendants plead to an action on a note given by them to the plaintiffs that the transaction between the plaintiffs and the defendants was a venture or speculation on margins, and that the note in suit was given for a loss in trading in options, and was therefore without consideration. The evidence showed that the transaction for which the note was given was, on the part of plaintiffs, made in good faith, with the purpose of delivering to the defendants the grain, which was the subject of the sale, and that they made actual purchases thereof with the intention of performing their contract of sale with defendants. The defendants had judgment in the court below. On appeal the Supreme Court reversed the decision, holding that although a transaction of the character alleged by the defendants to be the consideration of the note was illegal, and did not constitute a sufficient consideration to support a contract, yet that, to invalidate a contract on the ground of the illegality of the transaction, it must be shown by a preponderance of evidence that both parties bought or sold property with the knowledge and purpose that no actual delivery of the property, which was the subject of sale, should be made, or, in other words, that both parties participated in the intention which, if executed, rendered the transaction illegal. If one of the parties acts in good faith, with the intention and expectation of delivering or receiving the property, which is the subject of the sale, the transaction as to him will be valid, and will be a sufficient consideration for a contract in his hands based thereon.

The same journal reports the interesting trade-mark case of Humphrey's Specific Homeopathic Medicine Company vs. Wenz, in which the complainant corporation alleged that for many years it had manufactured and sold a series of homeopathic remedies put up in bottles and labelled with the words "homeopathic specific," in connection with certain numbers and references to the diseases for which each medicine was intended as a remedy, and that the defendant had infringed the complainant's trade-mark by taking bottles of about the size of the complainant's and labelling them conspicuously "homeopathic specifics," and adopting the same numbers as those used by the complainant for like diseases. It appeared that the complainant's specifics were known, ordered and called for by their numbers only, instead of the names of the particular diseases for which they were intended as remedies. Upon this state of facts the complainant asked an injunction to restrain the defendant from infringing the complainant's trade-mark. Judge Nixon, of the United States Circuit Court for New Jersey, in granting an injunction restraining the defendant from using the numbers specified in connection with the remedies for the diseases referred to, said that trade-marks must have reference to origin or ownership and not to quality. They must not be of such a character that their use will give a monopoly in the sale of any goods other than those produced by the person who invokes the protection of the court. Mere numbers, he continued, are never the objects of a trade-mark when they are employed to indicate quality, but they may be when they stand for origin or proprietorship in combination with words and numerals. The words "homeopathic specifics" standing alone could not be appropriated as a trade-mark; they are are too broad, and, if allowed, would give the taker a monopoly in a school of medicine. The name could no more be the property of the complainant than of any other practitioner of the homeopathic system. The right to use these words in connection with serial numbers, however, was the right contended for by the complainant, and this combination, the judge held, was properly the subject of protection against infringement.

BUSINESS NOTES.

Ground has been broken for the Louisville, Ky., southern exposition buildings, which will be opened August 1. It has been decided to continue the exhibition one hundred days. Out of the required sum, $300,000, there have been $250,000 secured.

The British labor market, as reported by the London *Labour News* of January 10, had improved. As an instance of this, the demand for labor on building contracts and on railway construction is cited. Sheffield steelmakers are said to be busy, although at Bradford and other textile manufacturing centers no special change had been noted.

The French woolen industries at the close of 1882 were said to be very much depressed. At Elbeuf business was very much restricted and prices offered were said to be ridiculously low. The position of a number of manufacturers there was reported critical. Several heavy French woolen-manufacturing firm failures at different points are already announced, and more are expected.

The French "Bureau Veritas" report for 1882 states that the total number of registered sailing vessels of the world is 48,487, with an aggregate tonnage of nearly 14,000,000 tons. Naturally, Great Britain heads the list, after which, in order, come America, Norway, Germany, Italy, Russia and France. England appears with 4,317 steamers, carrying 5,500,000 tons, America second with 594 steamers, and France with 414.

The total number of failures in the United Kingdom and Ireland reported to *Kemp's Mercantile Gazette*, for the week ending January 6, was 200, against 139 in the concluding week of 1882, against 196 in the opening week of 1882, and against 230 for the week ending January 6, 1881. England and Wales had 185, against 180 and 260, respectively, in the initial weeks of 1882 and 1881, Scotland 12, against 12 and 13, and Ireland 3, against 4 and 1 in like weeks of the years preceding.

The number of immigrants arriving in the United States during the calendar year 1882, as reported by the Washington Bureau of Statistics, was:

Baltimore	36,678	New York	472,938
Boston	52,648	Passamaquoddy	3,634
Detroit	20,736	Philadelphia	33,251
Huron	60,887	San Francisco	28,731
Minnesota	1,308		
New Orleans	1,631	Total	712,542

The countries from which the immigrants came and the proportions from each were:

England and Wales	77,725	Norway	26,185
Ireland	69,461	Sweden	58,742
Scotland	16,169	Dominion of Canada	83,071
Austria	12,301	All other countries	109,575
Germany	229,996		
Italy	29,317	Total	712,542

During 1883 the Canadian Pacific Railway Company intend advancing their line from Indian Point Farm, about 940 miles west of Winnipeg, 330 miles further on toward the Rocky mountains. The Selkirk branch, 23 miles, will be completed, and connection will be made from Emerson to the southwestern branch, a distance of 22 miles. On the eastern division the road will be completed 130 miles west of Callender, and it is likely the Nipissing and Algoma branch, from Wahniptic river to Algoma, about 110 miles, will be finished. The line eastward to Thunder bay will probably be completed to a point about 40 miles east of the Nepigon river. Work will also be begun at all available points along the north shore of Lake Superior, and will be pushed on vigorously.

There has been considerable discussion of late concerning the proposed export of crude petroleum in bulk in the holds of vessels specially prepared for that trade. There appears to be a wide difference in opinion as to the merits of the plan. It has been tried heretofore, but without success. The *Commercial Bulletin* has interviewed several oil shippers regarding the project. One thought well of the scheme. More oil could be shipped, the cost of barrels would be saved, and reshipment of barrels in case of non-sale of same abroad would be avoided. The tank or tanks in the hold of the vessel could be used for coarse freight on return trips. Another member of the Maritime Exchange did not believe the experiment would be tried again to any extent. It was undertaken eight years ago, and the

vessel was lost. It failed when tried between Cuba and Boston, and three other vessels so laden eight years ago went to the bottom. In rough weather the oil in bulk in tank in the hold lurches so as to render the vessel unmanageable. From this the *Bulletin* concludes that it is doubtful whether the present system of carrying oil in barrels be superseded by the plan referred to. On the other hand, the London *Colliery Guardian*, of January 5, contained the following: "We hear that a company with a capital of £200,000 has been founded at Gelsenkirchen, for supplying petroleum in bulk to the chief towns on the Baltic. It will be brought from America in specially designed vessels having tanks, which will render the use of casks unnecessary; and on arriving in port the oil will be pumped into pipes connecting the ports with the various towns."

The *Gazette*, published at Honolulu, Sandwich Islands, characterizes the year 1882 as one of great commercial prosperity to the kingdom of Hawaii. Almost every branch of industry is said to have advanced, but more particularly the sugar industry. The production of this staple is said to have reached 65,000 tons in 1882, and a "crop" of 68,000 tons "is estimated" by the Planters' Labor & Supply Company for the current year. The exports of sugar from the Hawaiian Islands for nine months of 1882 were valued as follows:

From Honolulu	$5,594,504.59
From Kahalui	1,312,520.00
From Hilo	96,366.27
Total Hawaiian Islands in 9 months of 1882	$7,000,339 86
Total Hawaiian Islands in 9 months of 1881	4,429,218.24
Increase in 1882	$1,571,121.62

The report of the Washington Bureau of Statistics on the exports of provisions, tallow, lard, butter and cheese during the calendar year 1882, as compared with those of the preceding twelve months, enables us to present the following exhibit of quantities and values:

	1882		1881	
	Pounds.	*Value.*	*Pounds.*	*Value.*
Fresh beef	53,983,739	$5,375,480	96,784,851	$9,250,562
Salt beef	40,517,648	3,057,013	42,537,126	3,247,504
Bacon	314,488,728	33,631,398	550,929,038	48,850,070
Hams	31,346,435	3,951,875	57,010,572	6.095,993
Lard	232,536,658	27,694,121	310,195,218	33,525,065
Pork	66,029,915	6,305,157	94,431,880	7,889,409
Tallow	39,383,825	3,320,510	60,183,993	4,886,266
Totals	778,286,948	$96,934,423	1,221,072,708	$133,332,417

Provisions, tallow and lard have therefore declined, as to exports in 1882, to the extent of 442,785,760 pounds, or about 33 per cent., as compared with the preceding year. The decreased value thereof was $36,397,994. Exports of butter dropped off 13,583,092 pounds, or about 66 per cent., and cheese 36,618,887 pounds, or about 30 per cent. The decreased value of shipments of butter was $2.555,694, and of cheese $4,024,985.

A London report on the condition of the hop market states that stocks unsold on January 1 were not sufficient for one month's consumption. It was believed that brewers may hold two or three months' supplies, but not more, as the year's crop will not admit of it. The writer of the report confessed his ignorance of what English brewers can do under the circumstances, inasmuch as they need nine months' supplies. The continent, which drained itself to supply British buyers, under the stimulus of high prices, is now itself an anxious purchaser in the English market. Bavarian brewers are said to be paying twice the amount for hops in London which they originally received for the same hops for export. The London *Grocers' Chronicle* adds that "American brewers are likely soon to be in the same position. The crop in the United States was but three-quarters of the previous one. In this case, America has already sent abroad more hops than she can spare, and must import before the next crop. She is already buying on the continent, which can so ill afford to part with any more hops. Looking at the hop markets all round we can only add that the brewers of the world have an anxious time before them."

The annual review of Mr. John White on the British steamship building trade of 1882, as summarized by the Manchester *Guardian*, contains several points of interest. The yearly production of iron ships is given at 1,000,000 tons, of which 395,149 tons were from the Clyde, the total showing an increase of 54,326 tons over 1881. With few exceptions, British ship-builders have orders enough to keep them busy during the whole of 1883, and in some cases well into 1884. Good prices have been paid, but a large proportion of the excess so received has gone into increased wages. A number of old-established French companies have been good customers of the British yards. Spanish, Chinese, Australian and New Zealand shipping companies have likewise ordered a good many ships, the heaviest patrons, of course, being British ship-owners themselves. A number of ship-builders built ships on speculation, and are said to have have realized on them handsomely. Comparatively few large ships were built, the Aurania, of 7,500 tons, and Pavonia, of 5,587 tons, being among the largest. "The Americans," the report adds, "have purchased to only a small extent, but they have chartered vessels much more freely." The year has been a serious one for the marine underwriters, many of whom have withdrawn from business. As regards the remunerativeness of the steam-carrying trade, Mr. White argues that the payment of a dividend of 8 per cent. by the Peninsular & Oriental Steamship Company, 9 per cent. by the Netherlands Steamship Company, and 7 per cent. by the French Transatlantic Company augurs well.

The *Oil and Paint News* publishes some interesting statistics illustrative of the steady and rapid decline of the whale-oil industry. This industry was at its highest tide between 1853 and 1858. At the latter date the tonnage was 203,141 tons, 587 ships and barks, 18 brigs and 49 schooners. At the present time the tonnage has dropped to 34,137 tons, composed of 101 ships and barks, 8 brigs and 38 schooners. The amount of oil secured in 1857 was 78,440 barrels of sperm and 230,941 barrels of whale. In 1882 the figures were 29,884 barrels of sperm and 23,371 barrels of whale. At the close of the war the price of sperm oil was $2.55 per gallon, and of whale $1.21 per gallon. In 1881 the price was 88c. for sperm (3c. above the average price for crude petroleum in tank), and 48c. for whale. Since that year prices have advanced, owing to the higher price for lard oil and the scarcity of whale and sperm. The largest exports of whale oil were in 1867, 18,253 barrels. In 1878, 14,371 barrels were exported. The heaviest stocks carried over the year was in 1870, when the supply in first hands reached 41,623 barrels. The smallest stocks were those of the 1st of January last, 3,675 barrels. In 1871, 28,650 barrels of sperm oil were carried over, and in 1875, 4,700 barrels. The consumption of sperm oil in 1882 was 40,200 barrels, or 2,000 barrels in excess of the average annual production for ten years. This indicates higher prices and a falling away in consumption. The outlook also is for a further reduction in the whaling fleet. The *News* suggests that the whale fishery will eventually contract to such proportions as to cease to have any commercial importance.

The following national banks have been organized: The Fort Plain National Bank, N. Y.; capital $200,000; Edwin W. Wood president; Joseph Shearer cashier. The Old National Bank of Cambridge, Ohio; capital $100,000; S. J. McMahon president; A. R. Murray cashier. The First National Bank of Macon, Mo.; capital $50,000; William Logan president; John Scovern cashier. The National Bank of Elyria, Ohio; capital $150,000; Heman Ely president; John V. Hulbert cashier. The Hamilton National Bank of Boston has elected A. H. Bean president in place of S. S. Blanchard. The First National Bank of Cambridge, Cambridgeport, Mass., has elected Daniel U. Chamberlin president in place of B. Tilton. The First National Bank of Pittsburgh, Pa., has elected Alexander Nimick president in place of J. Laughlin, deceased. The First National Bank of Braddock Pa., has elected J. H. Lippincott president in place of P. C. Knox. The Ashtabula (Ohio) National Bank has elected P. F. Good president in place of L. W. Smith. The Fourth National Bank of Columbus, Ohio, has elected Charles H. Frisbie president in place of W. S. Ide. The Exchange National Bank of Cincinnati has elected B. F. Poiner president *pro tem.* The National Bank of Burlington, Ia., has elected J. T. Remey president in place of E. D. Rand. The First National Bank of Cedar Falls, Iowa, has elected W. M. Fields president. The Union National Bank has elected W. C. D. Grannis president in place of C. T. Wheeler. The Covington (Ky.) City National Bank has elected J. D. Shutt president in place of W. M. Lee. The Centreville Savings Bank at Slippery Rock, Pa., has sold out to N. Patterson.

A summary of the report on the number of failures in business in the United Kingdom in 1882, with comparisons, has reached us. The totals are given as follows:

	1880.	1881.	1882.
England and Wales	12,471	11,632	10,707
Scotland	870	746	891
Ireland	325	242	198
Totals	13,666	12,620	11,796

These figures include professional and other business failures not to be classed as strictly mercantile failures. An analysis of the more important British failures by trades for 1882 and 1881 is given as follows, in connection with a like exhibit from BRADSTREET'S reports of United States failures in the same years:

BRITISH FAILURES BY TRADES.

	1882.	1881.
Groceries and provisions	2,336	2,511
Builders	1,317	1,133

Hides, leather and harness	102	78

†Decrease in 1882.

The different classifications of failures made by BRADSTREET'S and those given above prevent an entirely satisfactory comparison of the seventeen leading failure lists by trades. As the total number of British failures in 1882 was less than in 1881, those lines of trade which, on the other hand, exhibited a greater list of business disasters last year than the year before are indicated by reference to foot-note. In the United States the paper and book dealers and printing houses were the only lines of business mentioned recording a number of failures in 1882 less than in 1881. In the list of tobacco and cigar dealer failures the fact that there were 142 in each of the years named is somewhat remarkable. A general examination of the British and American statistics, as arranged, is of interest. It is noticeable that the total number of grocery, provisions and drapers' failures in Great Britain closely approximate those occurring among grocers, general storekeepers, clothing and cloth and provision dealers in the United States in 1882, nearly one-third of the whole number—with the "professional" and "agricultural" failures enumerated in the United Kingdom omitted.

BUSINESS AT SIOUX CITY.

Mr. A. S. Garrettson, of Sioux City, sends us the following: "For twenty years past Sioux City has had a name among the commercial cities of Iowa and of the west. Its business men have, through these years, exhibited great tact, and by energy and push have won for this city a position third in commercial importance of Iowa cities. It is hard to ascertain what the volume of the year's business has been. During the period named its banks have sold exchange amounting to some $16,000,000. This indicates a gross sale of goods and commodities of about that amount, though only a portion of the sales of retail merchants appear in the sales of exchange by the banks; neither are the profits on sales included, nor the sales of stock, grain, products of our factories, mills, packing-house, and other manufacturing institutions and industries; so it is concluded that the gross sales of merchants, manufacturers and shippers aggregate for the year fully $20,000,000. The field covered and supplied by the business men of Sioux City justifies this conclusion. Again, the volume of business transacted by the Sioux City post office during the year indicates the activity of trade. The local receipts for the year as shown by the postmaster's report were $86,500, this being almost one-third the gross receipts for the year, and the Sioux City post office is the depository for all the post offices in western Iowa, southern Dakota and northern Nebraska. Concerning the industries of the city, no facts are at command showing the situation fully. The contractors' and builders' report shows that 555 buildings were completed during the year. Chief among the industries might be mentioned a planing mill, foundry and machine shops, plow factory, button factory, paint works, mills and elevators, and pork-house, the latter institution having a capacity of packing 450,000 hogs annually. Sioux City grain buyers, probably, exhibit more push than can be found in any other industry. During the past six months they have bought grain over western and northern Iowa, southern Minnesota, southern Dakota and northern Nebraska. They have even gone out on the Union Pacific road, west of Omaha, and bought, and had their agents buying in Missouri, south to St. Joseph. It is safe to state that Sioux City grain dealers buy more grain annually than is marketed at any other city west of the Mississippi river, save only St Louis, Kansas City and Minneapolis. The city banks have done a very active and successful business during the year, having supplied the demands of local dealers and shipped out some $9,000,000 in currency to their country customers for purposes of moving crops, stock, etc. The rates of interest have rarely been raised above 10 per cent. or dropped below 8 per cent. Without going further into detail, it is safe to say that the commercial and industrial position of Sioux City to-day is a satisfaction to all her business men, and an encouragement for the ensuing year."

STATISTICS OF MANUFACTURES.

The following census bulletin shows the capital invested, the number of hands employed, the amount of wages paid, the value of materials used and the value of products, for all the establishments of manufacturing industry, gas excepted, in each of the states and territories, as returned at the census of 1880. The meaning of the more important totals and the details in reference to the principal states engaged in manufacturing were given in an extended article published in BRADSTREET'S December 2, 1882, as found in a "preliminary" census bulletin. The subjoined figures do not appear to vary materially from those referred to last month:

	No. of establishments.	*Capital.*	*Average No. hands employed.*			*Total amount paid in wages during the year.*	*Value of materials.*	*Value of products.*
			Males above 16 years.	*Females above 15 years.*	*Children and youths.*

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

The combination of "reformed bears" went to pieces this week, and there was a warm time in the market as the consequence. Charges of bad faith have been freely bandied about, as is usual after such a catastrophe, and the man or men who sold out on their colleagues and left them in the lurch have been searched for but not found. Mr. Cammack was said to be one of the recreants. What he says has not been reported. Mr. Cammack has the reputation of being one of the few chronic bears of Wall street. His appearance in the role of a rampant bull was a novelty. Doubtless he discovered that the new ways were not as agreeable as the old ones, and, fearing that some of his colleagues might have the same feelings, he started early for the other side of the market. That means that he, or some one else, threw over his holdings of stocks and broke the market. The truth is the game was up when Union Pacific broke on Thursday of last week. The pool which had so long been carrying a heavy load of this stock, for which no market could be found, embraced the first chance they had to unload. The bulls could not take the mass, and the price declined 3 per cent., thereby discovering a fatal weakness and giving a set-back to the forward movement of the market. After this it became a question whether the combination could handle the market, or whether it should break up altogether. It was remarked on a previous occasion that the members were unfortunate in selecting, as a leading card, a stock in such bad oder as Denver and Rio Grande. To thrust up the price of this stock in the face of popular distrust was an exhibition of courage—for it could only be advanced by their own purchasing—but it was poor business tact. The higher it went the more people wondered; but they did not buy. On the contrary, such as had got stuck with the stock sold out as the price approached the nearer to the figures at which they had bought; and the orders to sell from foreign holders were constantly coming in. The quotations reached high-water mark last Saturday, at 51⅛. The strain had become too great or the opportunity too tempting. Some one in the Denver crowd sold out. The stock poured out in such a stream that by Wednesday, at noon, the price had fallen to 44. Dire was the confusion. The downfall proclaimed to Wall street that the bull combination had broken up in defeat. Their pet stock, the one they had selected to demonstrate their strength, had gone down in ruin. Then it was said that Mr. Cammack had sold out. The market would have closed that day with something like a general collapse had not the Gould brokers come on to the floor and bought freely, principally of Denver. Under this the price rallied, and the market was carried to a comparatively steady close. As Mr. Gould is notoriously a bear on Denver, the judicious buying done by his brokers was merely the covering of shorts, done to steady the market. He has more than once declared that his only purchases of that stock would be to cover shorts, and they would be made on occasions when it became necessary to stiffen the market. As to Mr. Keene's operations during the week, he left the world in no doubt about them. He not only talked bear, but just before the market had its worst break this unique item of information came out over the news-tape: "Mr. Keene says he is a greater bear than ever. He says things are now in a condition where the bulls must double up or run." They ran. They had already all the stocks they could handle, and more; and the "doubling up" was simply a financial impossibility. The alternative was the only course open, and we may suppose that the great operator of Exchange place executed a small war-dance, if he ever indulges in such levity, as the stock-tape rapidly reeled off its record, in the fall of prices, of the precipitate flight of the bulls. The combination, it appears, had been directed particularly against him, as he was known to be heavily short of the market (he had stated openly that he was short 200,000 shares, and defied the combination to make him cover), and he had beaten them. Not single handed, however; for it is pretty evident that, though Mr. Gould appeared to have gone over to the bull side last week, he was acting in concert with Mr. Keene. These former enemies have been allies for some little time past. Mr. Gould spurted up his Western Union last week for a few days, and imparted a corresponding degree of strength to the general market, but, so far as can be seen now, that was a necessity to counteract the vigorous assaults then being made upon it through legal proceedings. When the immediate danger passed he allowed the price to fall back, the stock to become again comparatively inactive, and resumed his position of "sitting on the market."

After Denver had broken and proclaimed the disruption of the combination all Wall street appeared to join in a chorus of denunciation against the folly of having made it the leader of the market. There was no one who had not been sure how it would end. The various financial writers expressed themselves with more or less vigor on the subject; the "gossip" of the news-tape had it that substantial improvement might be looked for now that this stock had been dropped from its position. On Thursday the market did seem considerably better, as prices rallied somewhat and held steady until near the close of business. There was not, however, a great deal to encourage the expectation that prices had touched bottom. Any one carefully watching the tape would be more inclined to opine from the record of sales that it was rather a day of preparation for another assault. Such it was openly proclaimed to be by the leading bears, who asserted that the liquidation was far from complete, and that, before it was complete, Lake Shore, Union Pacific, Denver, and one or two other stocks held in large blocks by cliques, would have to go much lower. In the language of the street, these cliques would have to be "shaken out." They kept their word. The Union Pacific clique was shaken yesterday with extreme roughness, and the blocks of stock dropped were simply enormous. The price declined from 101½ to 98½—a clean drop of 3 per cent.

It will be seen from the events of the week that the statements made in these columns when the formation of the "pool of reformed bears" was first spoken of have been verified to the letter. It was then said that a combination to lead the market which included neither Mr. Gould nor Mr. Keene was something new in the street, and that these operators would probably take good care not to help strengthen the market merely to give the combination members an opportunity to unload their piles of stock upon it. If they went in to buy, the pool would sell them all the stocks they wanted. They were not to be caught in such a trap. For a time last week it did look as if the bull party would carry their point, and that Mr. Gould had from necessity been compelled to join them; but the rapid advance then made only brought the more speedy downfall. It may have been part of Messrs. Gould and Keene's plan not to oppose such an advance, waiting to make their attack when prices should have reached a higher and more dangerous level. The fight, it will be seen, has been purely among the professionals. The general public is not buying, and the old Wall street stagers have the field to themselves. The leading bears assert that the "shaking out" process will continue some time yet, and after that a substantial improvement may be looked for. This means, if it means anything, that after the reformed bears have been made to drop all the stocks they can be shaken out of, which will naturally fall into the hands of the operators now on the bear side, the latter will then be ready to start an upward movement of prices from the lower level reached, and will do their best to persuade the public to come in and take part in it. If outsiders should come in when the new movement begins, they had best get in as near the bottom as possible; for it is within the possibilities that this movement may "fizzle out" about as badly as the last. Even the shrewdest operators mistake the public temper sometimes, and have to pay roundly for their error.

The loan market has been very easy all the week, the average rate on call being about 4½ per cent. The banks are full of money, and will continue so probably into the spring. No one need fear, however, that the demands of the country for the surplus which industry can accumulate will not fully equal it, or that people having money to invest will not be able to find employment for it. Eighty-seven millions, par value, of new securities were placed on the Stock Exchange lists this week, and among them was the stock of the Canadian Pacific Company—the first considerable foreign investment, we believe, ever offered in this market. The authorized issue of the company is $100,000,000, and $55,000,000 have been issued. It indicates the growing importance of New York as a money center that the stock should have been brought here. It is also listed on London, and between the two places may be kept pretty active. Neither London nor Amsterdam is buying our securities, but selling them, and the troubles in France have been made an effective instrument this week in depressing the market. It was said that Paris was selling our securities, but Paris has extremely few of them to sell. Nevertheless, the partial panic which occurred on the Bourse did unfavorably affect the other markets of Europe, and our own market was not insensible to the shock. But this was fully counteracted by the action of the Bank of England directors on Thursday in reducing the discount rate from 5 per cent., at which it has stood so long, to 4 per cent. The bank is now well loaded up with a specie reserve, and the apprehensions of depletion by export of gold to this port have passed. The reduction had the effect of reducing the rate for sixty-day exchange, and the posted rates are now $4.83 and $4.86½, being a decline of half a cent. Actual rates yesterday were $4.82¼ @ $4.82½ and $4.85½ @ $4.86.

Government bonds are steady and quiet. The following were the closing quotations yesterday:

	Jan 19. bid.	—Jan. 26,— bid	asked.
U. S. 4s extended (3½ p. c.)	102¾	104	..
U. S. 6s 1891, registered	113⅛	112⅞	113⅛
U. S. coupon	113⅛	112⅞	113⅛
U. S. 4s 1907, registered	119⅛	119	119⅛
U. S. 4s 1907, coupon	119⅛	118⅞	119⅛

The bank statement of Saturday showed a further increase in the surplus reserve of $804,075, leaving it at $8,674,775. The following are the comparative totals of the statements of January 13 and January 20:

	January 13.	January 20.	Differences
Loans	$317,891,200	$317,459,800	Dec. $431,400
Specie	62,477,800	62,687,700	Inc. 209,900
Legal-tenders	22,372,900	23,064,400	Inc. 691,500
Deposits	307,920,000	308,309,300	Inc. 389,300
Circulation	17,526,700	17,476,200	Dec. 50,500

The proportion of total reserve to liabilities is now 27.81 per cent., against 28.11 per cent. at the same date last year.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

	Jan. 27, 1882.	Jan. 19, 1883.	Jan. 26, 1883.

COMMERCIAL.

The dispatches to BRADSTREET'S this week from the trade centers of the country reveal that doubt as to the action of Congress with respect to tariff legislation is nearly everywhere having a retarding influence upon the movement of business. In the west trade has been slow, owing to the heavy storms and consequent blockades. In the east trade has been fair. The movement of dry goods has shown some improvement, owing to the cold weather. In the west where the snow has not stopped trade the improvement in dry goods is quite marked. Interest rates have been tending downward. Speculation in wheat at the west came to a halt this week, and though on Friday prices were still at nearly the highest figures of the week, and considerably higher than a week previous, the markets were not so strong either in this country or in Europe. The speculation in corn was brought to a halt also by one of the principal bear operators in Chicago appealing to the courts, a proceeding which has unsettled confidence in the ability to maintain the corner in that market, and has caused a decline of nearly 2c. per bushel. The iron market, in general, continues quiet. Contracts for pig, generally made for delivery later in the season in February, are likely to be delayed this year. Stocks of pig are all very light, and heavy buyers prefer to remain out of the market while the future of the rates of duty on the imported article is as much in doubt as at present. The coal market is quiet. Prices in some cases have been stiffened by the restricted production of anthracite. The rates for bituminous are low and with no special activity. The most interesting point in connection with the bituminous industry is the proposition to have the leading eastern companies unite their interests as to production and transportation in much the same manner as the anthracite companies have done. This must, if carried out, affect the bituminous coal companies and operators favorably, though hardly promising any advantages to the consumer. There is no permanent improvement in the ocean freights market. A few petroleum vessels have arrived and departed. Rates on some of them were lowered, and an excess of this year's shipments of petroleum was thus maintained. There is little doing in exports of grain, Philadelphia and Baltimore being more prominent in this direction at present. Petroleum is firmer and higher, owing to the Patterson well fizzle. The Reno, Reed & Brenneman, and Shannon No. 2 wells have all fallen away of late, and the speculative market for petroleum at this writing bears a very bullish aspect. The amount of speculative transactions in petroleum now taking place at New York proper exceeds those occurring daily, prior to the opening of the Seaboard Bank last week, three fold. The demand for wool is steady, and the market is generally firm. Worsted fleeces, as a rule, are closely sold up. There were 289 failures in the United States reported last week, 28 less than the preceding week, 84 more than the corresponding week of 1882, and 123 more than the same week in 1881.

BREADSTUFFS.

The foreign markets for breadstuffs have been well sustained during the week, and there was an advancing tendency up to Thursday, when the Liverpool and London markets were easier at a slight decline for both wheat and corn, which was regarded as the effect of the previous day's decline in the American markets. But as the New York and Chicago markets both recovered on Thursday from the previous day's decline, it was presumed that the reaction in London and Liverpool would be recovered likewise. America is by far the largest source of supply of wheat to Europe, and this year this preponderance is more effectually felt in the foreign markets than in previous years. In view of the present situation, the natural tendency of the foreign markets would be toward higher prices, but their progress in that direction is governed by the movements of prices in the United States.

The total stock of wheat in London, Liverpool, Hull, Gloucester, Bristol, Glasgow, Leith, Belfast, Londonderry, Newry and West Hartlepool at the beginning of the year was an aggregate of 1,489,582 quarters, against 953,247 quarters one year previous and 663,111 quarters two years previous. This does not embrace the total stock of wheat in store in the United Kingdom, but the difference in the proportions of the amounts on January 1 at these ports, as compared with the two previous years, is a fair index of the same difference between the total stocks in store in the United Kingdom at the different dates mentioned. The total stock in store in the United Kingdom at the end of December, 1882, was estimated at about 2,150,000 quarters, against 1,550,000 quarters at the beginning of the year, the increase, therefore, is about 600,000 quarters, or 4,800,000 bushels. A little over two months ago this increase, compared with the previous year, was much larger. Since October 31 there has been a decrease of 65,000 quarters in the Liverpool stock and 9,500 quarters in the Gloucester stock, and since September 30 a decrease of 70,000 quarters in the London stock. And, as it is known that the stocks in the other ports have decreased in something like the same proportion, it is to be presumed that the total stock in all the ports—and in the United Kingdom—was from 15 to 18 per cent. greater in October than at the end of the year. The total net imports of wheat into the United Kingdom in the year 1882 were 1,550,000 quarters greater than in 1881, and the farmers' deliveries of home-grown wheat during the year were just about the same as in 1881 (7,600,000 quarters), but as the total stocks of wheat show an increase of only 600,000 quarters the difference is ascribed by the local statistical authorities (and notably by *Beerbohm's Corn Trade List*) to an increased consumption of wheat in the United Kingdom in the past year, which has been induced by the low prices of wheat as compared to other foodstuffs. This increased consumption has been at the rate of from 3 to 4 per cent. over that of the preceding year. It is believed in London that this increased consumption of wheat is more largely due to the scarcity and high prices of potatoes than to any other one fact. Prices of potatoes in London are from 50 to 100 per cent. higher than last year, and throughout the kingdom this is the rule, except in some districts in Ireland, where they are more than double the price of last year. If the scarcity of this one important edible root has caused such an increased consumption of wheat in the United Kingdom it would necessarily have the same effect on the continent, where the potato crop last year was almost a complete failure. It is therefore to be reasonably presumed that the consumption of wheat on the continent has been increased quite as much if not more than in the United Kingdom, and that, notwithstanding the increased importations of wheat this year by Germany and France, their stocks in store have not increased in even the same proportion as those in the United Kingdom.

AMERICAN WHEAT MARKETS.

The markets for wheat have been excited and fluctuated rather widely during the past week, the general result, however, being an advance in prices. On Monday the speculation in Chicago had advanced the price of February wheat to 103¼, which was 10c. advance in the prices of the same option since January 2. The more deferred options had also advanced in the same proportion, May being 9c. higher than on January 2. The New York market has, to a considerable extent, followed Chicago, but the advance was only a little over half as great. On Wednesday, however, there was a break in the Chicago speculation in all grains. For several days there had been a growing feeling that the advance was too rapid to be maintained, and a good many of the speculators began to realize on their holdings. A general break in all the markets was then precipitated by the action of John B. Lyon of Chicago (who was largely short on January corn) in procuring an injunction from the courts enjoining all the parties to whom he was liable on his contracts from calling on him for further margins, and also from buying in the corn on his short contracts under the rules of the Chicago Board of Trade, as is customary in that market in such cases. The resort to litigation under such circumstances as these had a demoralizing effect upon the whole grain market, and caused a sharp decline in the Chicago market, which extended to New York and Liverpool. But as far as wheat is concerned, the arrivals are so small at the principal western markets and the whole situation so favorable to higher prices that the American markets recovered the decline on Thursday. The total arrivals of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria in the week to January 19 were only 699,992 bushels, against 711,607 one week previous, 925,678 two weeks previous, and 1,229,827 three weeks previous. These are representative points, and while they do not embrace the entire wheat movement at the west they represent the great bulk of it. The decrease in the movement from farmers' hands shown by these figures is possibly due, to some extent, to the obstruction of railway traffic by heavy snows, but probably more largely to the unwillingness of farmers to sell any more grain than they are obliged to at present prices. But, aside from this, there is always a decrease in the movement of grain from producers' hands after the holidays, and several weeks ago we mentioned in this article that this would probably be more noticeable this year on account of the low prices for wheat.

Notwithstanding the large wheat crop of 1882 in this country, the visible supply of wheat in the United States does not increase much beyond what it was at the corresponding dates of the previous year, when the crop was very small, and, in view of the decreased estimates of the crop, it is to be doubted if we have any larger exportable surplus of wheat than at this time two years ago.

The statement of the visible supply of wheat in the United States and Canada on January 20, as compared with January 13, shows an increase of 381,543 bushels.

CORN.

The corn market has been excited and has experienced some rather violent fluctuations as the result of the speculations in Chicago, which have taken the shape of a corner in the January option, but which received a set-back on Wednesday by the most prominent short-seller (John B. Lyon) appealing to the courts to save him from the results of his own speculation, by restraining anybody from calling on him for margins, or from buying in the corn on his contracts, and making him pay the difference, as he would be obliged to do under the rules of the Chicago Board of Trade. The question as to whether the injunction of the court will be sustained in law and by higher judicial authorities is one of more importance than the mere settlement of this one speculation in corn. If the power of the Chicago Board of Trade to discipline its members or to expel them for disregard of its rules can be restrained by the courts, the Board of Trade has no functions to perform, and there would be no reason for its existence.

As remarked in our article of last week, there is a prevailing belief that the corn crop has been overestimated, and this, with the continued demand in the country for feeding purposes, the diminishing arrivals at the principal western points, and the unusually low state of the stocks in all the eastern markets, are sufficient reasons for a continuance of the present high prices. The total arrivals at Chicago, Milwaukee, Detroit, Indianapolis and Peoria, in the week to January 19, were 1,278,280 bushels, against 1,413,568 in the previous week and 1,831,079 two weeks previous.

Complaints have come to us from St. Louis in regard to the omission of the receipts of grain at that point from our usual weekly aggregates of the arrivals at the principal western points. The omission of the movement at St. Louis was made necessary some months ago on account of the irregularity of the daily telegraphic reports from the St. Louis Chamber of Commerce to the New York Produce Exchange. In the summer months a large part of the grain arriving at St. Louis comes by boats down the river; these were not regularly reported but only estimated, and the discrepancies between the estimates and the actual as afterwards ascertained were too wide to be easily harmonized. But if the St. Louis Chamber of Commerce would regulate the matter, we should be glad to include the movement at that point.

The statement of the visible supply of corn in the United States on January 20, as compared with January 13, shows an increase of 147,287 bushels. The high prices for corn have induced a large consumption of oats, and, notwithstanding the largest oat crop last summer ever raised, and an unusually large movement from farmers' hands, the stock of oats in the United States is only a little larger than at this time last year.

PROVISIONS.

The provision trade has been quiet compared to that in grain, and yet prices have advanced some during the week. The extreme cold at the west has destroyed a great many cattle on the ranches on the western plains, and also a good many hogs in the northwestern states that were in transit on railway trains or otherwise in exposed situations. The foreign markets for provisions have continued dull, but firm. There is a continued large consumptive demand from all the usual consuming markets of the United States, which prevents any considerable increase of the stocks on hand at the principal western packing points and maintains prices.

THE PROVISION MARKETS BY TELEGRAPH.

From Cincinnati, Ohio: The provision market has maintained a strong tone, with liberal consumptive movement.

From Chicago, Ill.: Pork dull; little speculation; operators say stocks will show large February 1. Lard weaker under light demand; no pressure to sell. Meats neglected by shippers.

From Detroit, Mich.: The provision trade is reported as satisfactory for the month.

From St. Louis, Mo.: Provisions are in good shipping demand, at well sustained prices, but the local trade is dull. Cattle receipts here are of excellent quality, and fairly large; market very active, and advancing. Hogs active and firm, but receipts declining a little.

From Wilmington, N. C.: Provision market active.

From Nashville, Tenn.: The provision market remains unchanged; demand fair. Country produce steady. Cattle receipts fair, with good demand.

From Memphis, Tenn.: Receipts of live stock the past week light; demand active, and prices firm at good figures.

THE NEW YORK DRY GOODS MARKET.

The New York dry goods market does not show any marked improvement over the previous week. The importing and domestic commission houses report trade quite dull, and woolen jobbers are also complaining. There are plenty of buyers in the market, but they are not yet purchasing their usual heavy bills, and probably will not do so until after another week has passed over. The month of January is always a quiet one, and this year is no exception. Of course there is some business doing, but it is only in special selections. The importations and marketings for the week are as follows:

	No. of packages.	*Value.*
Total imports of dry goods during past week	11,886	$3,815,448
Total amount of dry goods, duty paid, for past week	11,641	3,612,464

THE BRITISH COTTON GOODS MARKET.

[By Cable to BRADSTREET'S.]

London, January 26.—As the price of raw cotton hardens more business offers in Manchester. Buyers are eager to secure latest terms. Fair continental and eastern orders have been placed.

THE DRY GOODS MARKETS BY TELEGRAPH.

From Portland, Me.: The dry goods trade is inactive.

From Boston, Mass.: There has been a moderately fair trade in dry goods, but it has not, as yet, opened briskly. Most of the jobbers have their travelers out, but inclement weather and blockades have interfered with obtaining many orders. Every one, however, confidently looks for a good business.

From Providence, R. I.: The print-cloth market is firm, with active demand at quotations. The amount of sales is moderate; 64s are quoted at 3 11/16c., and 56x60s at 3 3/16c.; there are about 160,000 pieces on hand. The cotton market is quiet and steady, the amount of sales being light; middling uplands are worth 10½c., and middling gulfs 10¾c.; the stock on hand is light, being about 5,000 bales.

From Philadelphia, Pa.: Demand for spring goods at first hands is improving, and there is a fair package business doing in staple cotton and woolen fabrics. Agents are taking some orders for fall woolens and look for a better trade next month. The jobbing trade continues quiet. Local makes of cotton and shoddy goods are still in large supply and dull.

From Pittsburgh, Pa.: Dry goods trade continues quiet and dull. There has been some activity in

woolens, caused by the cold weather. Prospects are regarded as encouraging.

From Cleveland, Ohio: The dry goods trade, in sympathy with most other lines, has been quiet.

From Columbus, Ohio: Trade in dry goods quiet, and, although the weather is cold, demand for flannels is not large. Dealers, it is said, prefer to close out old stock.

From Dayton, Ohio: Dry goods market dull. Collections reported slow.

From Indianapolis, Ind.: Dry goods trade quiet.

From Chicago, Ill.: Staple dry goods sell fairly on orders. Country stocks generally reported light. A good trade is predicted when weather improves.

From Peoria, Ill.: The severe weather of past week or so has caused an active demand in heavy woolen and flannel goods.

From St. Louis, Mo.: In staple dry goods there is a remarkably good trade for the season. Values are firm and buyers are asking no concessions.

From Burlington, Iowa: Dry goods rather quiet; no special movement. Collections fair.

From Detroit, Mich.: In dry goods indications point to a very good spring business; trade for the month has been much better than was anticipated.

From St. Paul, Minn.: Dry goods trade limited to supply of actual wants, owing to storms and snow having filled the roads, thus preventing farmers from marketing produce.

From Omaha, Neb.: Jobbers of dry goods report business very dull, and most houses are spending their time in stocking up.

From San Francisco, Cal.: The dry goods trade is unchanged.

From Baltimore, Md.: The dry goods market the past week was inactive and the volume of business transacted was small. The sales are much less than at the same time last year.

From Norfolk, Va.: Dry goods jobbers have men out on the road, and it will soon be active.

From Richmond, Va.: The dry goods trade is only fair.

From Wilmington, N. C.: Dry goods jobbing trade quiet; retail trade fair.

From Savannah, Ga.: Dry goods still unsettled, with only a limited demand for filling in broken stocks; spring demand not yet opened.

From Waco, Tex.: The dry goods trade reported rather slack. Prices remain firm as usual and the merchants look forward to a good trade for 1883. Collections are said to be fair from country merchants.

From Memphis, Tenn.: No improvement is reported by wholesale dry goods houses in their sales the past week.

From Nashville, Tenn.: The dry goods trade for the week has been fair for this season of the year.

COTTON.

The total receipts of cotton at the ports since September 1 are 4,155,584 bales, against 3,641,851 bales for the same time last year, showing an increase over last year of 513,733 bales. The total receipts for the week at each port, compared with those of last week and the corresponding week last year, are given below:

	This week.	*Last week.*	*Last year*
Galveston	12,434	18,617	7,353
New Orleans	54,398	53,292	18,142
Mobile	8,978	8,939	3,998
Savannah	12,844	12,474	15,534
Charleston	8,110	9,404	6,527
Wilmington	2,285	2,646	3,269
Norfolk	14,335	13,102	15,220
Baltimore	5,298	8,787	330
New York	6,154	9,641	8,602
Boston	3,900	4,134	4,292
Philadelphia	3,013	2,728	1,927
Other ports	3,340	4,928	2,988

The receipts at the twenty-four interior towns usually reported were 44,262 bales, against 50,936 bales last week and 24,018 bales for the corresponding week last year. The shipments for the week were 57,618 bales, against 61,126 bales last week and 42,340 bales for the corresponding week last year. The stocks for the week were 323,149 bales, against 335,946 last week and 370,678 for the same week last year. The New York cotton market has been higher for spot middling uplands, and the price has advanced to 10 3/16c. The sales for the week have been for export 580 bales, and for consumption 374 bales, making a total of 954 bales. Below will be found the closing quotations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
Ordinary	7 1/16c.	7 9-16c.	9 5-16c.
Strict ordinary	7 15-16	7 7/8	9 7/16
Good ordinary	8 3/4	8 11-16	10 11-16
Low middling	9 11-16	9 3/4	11 9-16
Middling	10 3-16	10 1/8	12
Good middling	10 1/2	10 7-16	12 3/8
Middling fair	11 1/4	11 3-16	13 1/8
Fair	12	11 15-16	13 7/8

The New York market for spot cotton closed quiet and steady.

The New York future market has been higher, the price having advanced an average of 18 points for near months and 19 points for later months. The sales for the week foot up 442,000 bales, against 770,000 bales for the corresponding week last year. The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
January	10.18c.	9.99c.	12.11c.
February	10.18	10 01	12.12
March	10.31	10.14	12.39
April	10.45	10.27	12.60
May	10.59	10.39	12.79
June	10.73	10.54	12.94
July	10.86	10.67	13.06
August	10.97	10.78	13.16

The New York future market closed firm.

The Liverpool market for spot cotton has remained unchanged for middling uplands. The price of middling Orleans has advanced to 5 13/16d.

The sales for the week at Liverpool were 97,000 bales (of which 66,000 were American). Stock in port 821,000 bales (of which 555,000 were American), and the amount afloat 344,000 bales (of which 289,000 were American).

The Manchester market is reported firmer, but not quotably higher.

COTTON REPORTS BY TELEGRAPH.

From Wilmington, N. C.: Weather variable. Cotton receipts increasing, with a steady market and prompt sales.

From Columbus, Miss.: The weather has been wet and cold for the past week, and trade was moderate. Considerable quantity of cotton on plantations and in gin house. Nothing done in preparing for the next crop.

From Waco, Tex.: Barring the recent severe norther, our winter has been pleasant and well suited for gathering the cotton crop, which is about in.

From Helena, Ark.: Two days' favorable weather. All cotton saved hereafter will grade low.

WOOL.

The general movement during the past week has reached satisfactory proportions, and a better feeling pervades most of the domestic markets. Confidence in the stability of current values is increasing, and when supplies are needed manufacturers pay the rates asked with less hesitancy. There is not much disposition to anticipate requirements, however, unless some special bargain is offered—and opportunities of this kind are rarely presented, as sellers generally look for higher rather than lower prices in the future. There is nothing in the present condition of affairs to indicate any immediate improvement; but stocks are so well in hand that any change that may occur is likely to be in sellers' favor. The supply of fine clothing wools is ample but not large, and there is no unwieldy accumulation of any kind of washed fleeces. Long staple wools are closely sold up, and there is no abatement of activity in demand, as mills running on worsted fabrics are generally sold ahead and spinners are crowded with orders. Western markets are rather firmer, but the severe cold and transportation difficulties have prevented any general activity at country points during the week. Receipts at the seaboard have considerably decreased.

IRON.

The iron market continues to drag heavily. It is now generally admitted that the depression is caused by the tariff tinkering going on at Washington. An immediate adjournment by Congress, rather than the prospect of an indefinite continuation of the proceedings as at present progressing, would be preferable. Manufactured iron reports no advance in prices. One lot of 800 tons of puddled bars was sold at Philadelphia during the past week at private rates. Plate iron continues dull and out of demand. Tank and sheet are not noticeably in request. Steel rails have continued quiet during the week. No contracts of moment are reported and rates are quoted $40@$40.50 at mill for large lots. Pig iron remains as last described—inactive, with buyers out of the market. Prices are unchanged. Stocks are low—in fact very low, and there appears to be no intention of increasing demand or extra production until the existing tariff uncertainty is done away with. One contract of pig iron of some moment has been made for future delivery, but the parties thereto and the terms therefor have not been made public. The talk of a pig-iron demonstration at some public hall, with a view to impressing Congress with the necessity for a high rate of duty on imported pig iron, does not appear to emanate in any degree from the leading producers of pig iron here. The latter have made good profits of late years, some of them very large profits indeed, and it is extremely doubtful if they care to identify themselves with a public discussion of the kind referred to, inasmuch as pointed and pertinent questions asked of them there might fail to show their need for higher rates of duty on imported pig. The Scotch pig market at New York is quiet at unchanged prices. The sales during the week amounted to about 500 tons of various brands of spot lots. The arrivals aggregated about 1,600 tons. Southwest, south and west close competition and cost of manufacturing enter less keenly into the present situation, and the state of the iron market at centers in those regions is reported better than east of the Alleghanies.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, January 26.—Notwithstanding recent failures, iron works are fairly busy. Some Cleveland works in difficulties. The mild season makes coal easier.

THE IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: The unsettled tariff question continues to block trade, and prices are irregular. A few large transactions have been made at concessions. All the eastern mills are fairly busy, and the prospects are favorable for a good trade as soon as the tariff matter is decided. Steel rails are in fair demand and steady.

From Pittsburgh, Pa.: The bar iron market has undergone no material change since last week. Buyers are holding off, awaiting a final settlement of the tariff question. Large orders are not being placed, and small ones are not numerous.

From Cleveland, Ohio: The iron markets are substantially unchanged, purchases being still confined to immediate requirements and limited in amounts. Prices are unsteady, and a definite expression of opinion as to the future of the market is difficult to obtain.

From Cincinnati, Ohio: Iron is without animation, with liberal offers, but little disposition to buy for future orders. Some of our manufacturing industries are unsatisfactory, owing to the stoppage of nail mills and suspensions of stove foundries through an effort to obtain a reduction in some scale of prices paid their workmen. There is a belief that the latter cause will soon be removed and satisfactory arrangements be effected.

From Chicago, Ill.: Nails, bar and pig iron slow. No developments regarding steel rails.

From Detroit, Mich.: In iron there has been no special change to note. There is a fair demand in a quiet way, with prices about the same.

From St. Louis, Mo.: Iron sales are rather heavier than last week and manufacturers are receiving more orders. Prices are unchanged, but cannot be called firm, and there is much dissatisfaction over tariff uncertainties.

COAL.

The policy of restricting the output of anthracite the latter half of each week "until further notice," in order to keep down the tendency of stocks to accumulate and to stiffen the much-disregarded-of-late circular rates appears to be doing half its duty, to say the least. Stocks do not grow in advance of the quiet winter trade demand, and operators and others intimate that better rates have been asked and secured. Inasmuch as no specially heavy contracts have been entered into within the past few days there is as yet no special feature in prices. West the anthracite trade is much better than at eastern centers. Bituminous coal at New York is dull, and elsewhere not specially active. High freights from the Maryland regions have caused this in part. The success of the anthracite companies in "pooling their issues" has stimulated the suggestion that the leading companies and operators in the Cumberland and Clearfield bituminous regions combine similarly for their mutual interests. The subject has not been thoroughly discussed as yet, but there is little reason to doubt that if such an arrangement is made the "mutual interests" will mean a higher average price to the consumer.

PETROLEUM.

The petroleum bulls waited so long for the "coming in" of the dreaded Patterson well that they finally tired of it, and concluded that the hole was dry. Simultaneously with this decision they ranged up round the bull-ring again, and braced the market till $1 was touched and passed. This result, coming as it did on the heels of a week or ten days of inactivity and dullness, lent additional force to prices, and a rumor (contradicted later) on Thursday, that the well was "a gusher after all," dropped prices but 4c., on which they recovered sharply, almost before the statement of the troublesome telegram had been denied. The course of prices since the last report has been as follows: Saturday was quiet, operators continuing their policy of letting speculation in certificates alone until the mystery hanging about the Patterson well is exploded. The Shannon well No. 2 came in, as reported, doing from 150 to 200 barrels. The closing price was 89⅞@90c. Monday, during the greater part of the day, was practically a repetition of Saturday. Toward the close word was received that the Patterson well was dry, and prices jumped from 91¾c. to 94¾c. It occurred to many, however, that the report might be denied later, and prices weakened to 94c. The opening price was 90⅛c., the highest 94¾c., lowest 90c., and the closing 94@94⅛c. Tuesday brought no further news from Forest county, and the day was, therefore, inauspicious as to the trading done. The price of certificates declined ⅜c. on the day. The opening was 95c., also the highest for the day; the lowest figure touched was 92½c., and the close was 93⅝c. bid. Wednesday witnessed a strong market, active trading and an advance of 6⅛c. in prices. There was, to be sure, another rumor that the Patterson well was dry, but such rumors are cheap, and the advance appeared to be rather due to a settled conviction that if the Patterson well had amounted to anything something definite would have been made known. The opening and lowest price was 89¾c., the highest $1.00¼, and the closing 99¾c. bid. On Thursday the forward march of the bulls became a regular charge bayonets at double-quick time. The day, therefore, joined that almost innumerable caravan of petroleum red-letter days so commonly characterized as "the most exciting in the history of the trade," or closely approximating it. Patterson well news was lost sight of in the firm advance in prices and the general scramble for oil. So many holes in the neighborhood have proved barren that the Patterson tap can only reach a limited pool in any event. So the market boomed. Opening sales were made at $1.03, the highest price was $1.05⅛, the lowest $1.01¼, and the closing figures were $1.04@$1.04⅛. On Friday Thursday's report that the overrated Patterson well was 1,880 feet deep, dry and open to public inspection, was confirmed, and the petroleum market thereupon gathered strength and became animated. Prices opened at $1.04¼, advanced during the morning session to $1.05⅛, and closed at noon at $1.04¼. The outlook in the producing regions is now quite bullish. The Reno well, which opened with a production of 2,500 or more barrels daily, declined until one day last week it had touched 400 barrels. It was shot, and responded with 700 barrels, since which it has flowed freely, but in diminishing volume. The Reed & Brenneman well is down to 300 barrels. It has also been shot, but did not respond. Shannon No. 2 opened at 150@200 barrels, and has since declined. This leaves the much-talked-of "Forest county pool" in a very bad light. What oil there is there is undoubtedly in patches, and the value of property in that vicinity is therefore much below the figure at which it has been held. But one possible gusher now remains in sight, Shannon No. 5, about 500 feet south of the Reno. It is expected in some time next week.

On Saturday and Monday last there were no changes made in the quotations of refined petroleum or crude in barrels. The demand continued weak and sales light. On Tuesday refined oil was advanced ⅛c. per gallon, according to grade. Again on Thursday, owing to the strength of the speculative market for certificates of crude, refined was advanced another ⅛c. all around. The demand for crude in barrels continued light, but prices were well maintained at rates last given.

The total exports of petroleum (crude equivalent) from the United States for the week ending January 20 were 9,665,922 gallons, against 9,639,427 gallons for the week ending January 13, and 6,099,349 gallons for the first week of the new year. This indicates a tendency toward increasing exports, the outcome of which is already noticeable in that it has placed the total for three weeks ahead of the corresponding total in 1882. From January 1 to 20 the aggregate exports of petroleum (crude equivalent) from the United States was 25,404,698 gallons, against 24,652,947 gallons in a like portion of 1882, an increase in three weeks of 1883 of 751,751 gallons, against a decrease of 3,239,829 gallons in the two weeks' exports of 1883, as against those in a like portion of 1882. Out of the total of 9,665,922 gallons exported during the three weeks ended January 20, 8,745,455 gallons were from the port of New York, against 9,132,567 gallons from said port in the preceding week. This leaves but 920,467 gallons exported from United States ports other than New York during the third week of the month, against 506,860 gallons shipped abroad by such other ports in the preceding week. New York has sent abroad (January 1 to 20) 23,275,043 gallons, against 19,340,373 gallons in a like portion of

1882, an increase of 2,934,670 gallons, as compared with a net decrease of 435,997 gallons on the first two weeks exports in the month. The stock of American petroleum in Europe on January 1, 1883, has been given at 1,518,907 barrels, against 1,041,137 barrels on the same date 1882.

OCEAN FREIGHTS.

The unsatisfactory condition of this market as reported last week and for several months preceding is continued without signs of improvement, other than that the free arrival of vessels for chartering is of course nearer than it was, and therefore better rates are so much closer at hand. The market for ocean freights during the past week has been dull owing to inactivity of shippers, which in turn has been largely caused by scarcity of tonnage and firmly held rates on the part of brokers. Grain shipments are most notably interrupted, Baltimore and Philadelphia doing more than New York in this direction at present. There have been some arrivals of petroleum vessels. These were in part chartered prior to arrival. Those remaining were quietly taken up at slightly lower rates. The port is therefore again bare of charters, and rates will again be higher.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: General markets sluggish on account of cold weather and drouth. Grocers and flour dealers hopeful. Produce market strong and buoyant.

From Boston, Mass.: The boot and shoe trade is quiet; there are about fifty buyers in town. Shipments are unusually large, so that there is a good deal of activity in the trade, though not on new business. Shipments for the week to places outside of New England, 52,219 cases, against 48,374 cases the fourth week in 1882. Total shipments since January 1, 168,691 cases, against 148,565 cases same time last year.

MIDDLE STATES.

From Philadelphia, Pa.: The wholesale markets have been only moderately active, but trade in most lines has been up to the usual volume for the period known as "between seasons." The outlook in most departments is fairly encouraging. There is a good deal of enforced idleness and some distress among the employés of local textile mills that have stopped recently because of overproduction and a declining market, but the general industrial situation is reasonably satisfactory. The building trades especially confront a favorable outlook, many new enterprises being projected for the coming spring. There have been few important changes in values outside of the grain trade, where speculative influences have continued to a great extent to dominate the markets. Exporters have been buying very sparingly both of grain and oil. A better business could have been done, however, had it not been for the general scarcity of vessels. The flour trade has been quite active, at slightly improved prices. Farm products are plentiful and dull. Butter is weak, and declining under large supplies. Provisions are jobbing fairly, at firm prices. Cotton is dull, but held with more confidence. The Board of Trade strongly oppose the proposed transfer of the signal service from the War to the Interior Department, and this organization, as well as the Captains' and Vessel-Owners' Association, have entered protest against the transfer of the lighthouse and marine service from the Treasury to the Navy Department.

WESTERN STATES.

From Cleveland, Ohio: Business in most lines has been quiet, the intense cold weather prevailing throughout the week materially retarding trade in some branches. Hardware and groceries have been active, and, for the season, in exceptionally brisk demand. Collections are only fair.

From Cincinnati, Ohio: Delayed legislative action continues to affect the volume of business, although returning confidence in the financial strength of the community has protected prices and secured a better movement in general merchandise. Wheat and corn have each advanced, and flour has shown strong sympathy by advancing 25c. a barrel. The week, however, closes with little animation in the latter article. There is a strong domestic demand for cotton, and higher prices; stocks on hand 5,000 bales. Transactions in whisky largely for immediate consumption and prices appear unchanged. There have been large openings of tobacco and a liberal disposition to buy; no advance in prices, however.

From Columbus, Ohio: The wheat crop has suffered some from the cold snap, but the present fall of snow will prevent further injury. Manufacturing industries reported only fairly active. Collections a little better.

From Indianapolis, Ind.: Trade is still quiet in most lines, and country merchants appear to be buying sparingly. Collections are better, but still some complaint of being slow; but trade and collections are both expected to improve shortly. Weather still cold.

From Evansville, Ind.: Business, the past week, has been rather dull in all lines of trade, owing to a blockade in the river, which has also done considerable damage to the boating interest. Weather continues cold and disagreeable, and country roads are miserable. Wheat is strong and active. Flour in good demand.

From Chicago, Ill.: Merchants report collections slow, owing to cold weather, which checked business in the country. The situation, it is expected, will improve with good weather. Coal is active for domestic consumption; stocks rapidly decreasing. More manufacturing demand for leather, and large sales anticipated. Wheat active; local speculation; little outside order or shipment demand; market not strong. Corn receipts larger; January and February weaker; long futures strong; indications that longs are holding market to get out. Groceries more active. Sugars and coffees scarce.

From Peoria, Ill.: Trade is gradually improving, with the expectation of a lively trade in February.

From Detroit, Mich.: Groceries and other lines report satisfactory business for month, with fair collections, and trade in healthy condition. Weather seasonable, roads in country in good condition, and retailers reported as doing a good business.

From Grand Rapids, Mich.: The general trade for the past week is reported extremely quiet. This is occasioned by the severe snowstorms and general blockade. Lumber sales for ten days past have been quite brisk.

From Louisville, Ky.: The weather is more favorable for the distribution of winter goods, but, owing to the shortness of the season, orders are necessarily on a limited scale. In staple lines of merchandise there is a moderate average jobbing trade. The condition of the agricultural classes is reported to be comfortable. Flour firm and active, with stocks reasonable. Cotton steady, and in fair inquiry. The Cotton Exposition project is succeeding admirably. Leaf tobacco receipts and sales are large, especially new crop burleys, and the market is generally firm and animated on all grades.

From St. Louis, Mo.: All grains weak, with symptoms at times of demoralization. In southern Missouri winter wheat is badly injured by alternate freezing and thawing weather. General trade is showing moderate improvement, although the weather and transportation delays have been unfavorable.

From Burlington, Iowa: Retail trade has been good during the week, country roads in fine condition, making produce receipts and city traffic quite active. Jobbers report a fair inquiry, indicating a good spring trade.

From Milwaukee, Wis.: Business among jobbers in all lines as well as retail trade has been seriously retarded during the past week in consequence of the extreme cold weather and the heavy fall of snow, which also inconvenienced the railroads and deprived many localities of regular mails. Receipts of currency from the interior have been very light.

From St. Paul, Minn.: The general opinion here is that when the weather permanently improves more wheat will move, prices being higher now; mail orders fair, wholly from traveling men. Confidence is expressed that the spring business will be good, as the cold weather aids country customers to work off stocks. Heavy goods market, though quiet, shows slightly better sales; prices steady. Other merchandise sales limited. Banking transactions limited, partly due to mail delays and reduced trade volume.

From Minneapolis, Minn.: The weather has been unusually cold and stormy the greater part of the month, and during the last two weeks many of the railroads have been blocked by snowdrifts and trains abandoned. Country roads are in no better condition. As a consequence, trade of all kinds has been dull. Farmers cannot deliver their produce, and in many localities country merchants could not get goods if offered; so the jobbing trades in all lines are dull. Wheat and flour market firm at an advance of 10c. for wheat and 25c. to 50c. for flour. Receipts of wheat for the week 205,000 bushels. Shipments of flour, 93,000 barrels.

From Omaha, Neb.: All grocery houses report business very quiet, and collections are still very slow. Very cold weather has served to keep business down, and it is believed that, with milder weather, general trade will improve. A large number of failures have taken place the past week among a class of traders who have been cramped for some time past, and nearly all cases were looked for.

CALIFORNIA.

From San Francisco, Cal.: General trade situation unchanged. Warm rains have improved crops. Prospects of an abundant harvest reported from Australia.

SOUTHERN STATES.

From Baltimore, Md.: General trade has been very quiet the past week, and there is little doubt but that the rumors prevailing of smallpox being almost epidemic here are having a very detrimental effect upon all branches of business. The disease referred to has been on the decrease for some days past, and there is little or no cause for the alarm that has been made, as the total number of cases is not large. Numerous complaints are heard regarding January collections; they are said to be coming in very slowly. The rise in corn created quite a flutter early in the week, and several houses were "caught" and compelled to suspend. The market is now easy. There is a fair demand for southern wheat, and that market is quoted active, while western rules dull, but easy. The cotton market is firmer, and holders appear to take stronger views. Late sales were mostly at 9⅞@10c. for average good samples. The tone of the petroleum market is generally firmer, and crude is higher.

From Richmond, Va.: The weather has been more favorable, and there has been a slight improvement in business over last week.

From Norfolk, Va.: Trade generally has improved. Receipts of cotton improving. Planters are holding back all they can for better prices. All other industries fairly active. Collections moderate.

From Wilmington, N. C.: The market for spirits of turpentine, rosins, tar and crude turpentine is steady and the demand good. Grain and breadstuffs active. Timber advancing. Lumber and shingles quiet. Foreign freights steady; coastwise flat.

From Savannah, Ga.: Trade is now steady, with clearer weather, but the roads are in bad condition from the effects of recent rains. The jobbing line continues to receive goods preparatory to the spring openings. Merchants are cautious as to whom they sell, in consequence of unhealthy reports from the interior. The country has been generally productive, and farmers have benefited. They are dealing more in the city than patronizing home storekeepers, and this has left them with full stocks and with but little money to meet maturing bills.

From Waco, Tex.: The wholesale trade in all lines reported rather slack.

From Memphis, Tenn.: Trade in general for the past week has been fair. Flour firm, and prices advancing. Corn and cornmeal stiff. Hog products advancing. Country produce steady, with fair prices obtained.

From Nashville, Tenn.: General trade for the week has been very good in all lines. Flour steady with fair shipping demand. Wheat active and higher. Corn steady; prices unchanged.

The following table, giving rates on prime commercial paper and exchange on New York at the cities named, is based on special dispatches to BRADSTREET'S, received yesterday:

BRITISH FOREIGN TRADE FOR TWENTY-THREE YEARS.

The Manchester *Guardian* prints the following table, which shows (in millions of pounds sterling) the values of the imports into the United Kingdom, as well as the exports of British productions and the re-exports of foreign goods, during each of the past twenty-three years. The excess of imports is also added in each case:

	Imports.	Exports. British.	Exports. Foreign.	Total exports.	Excess of imports.
1860	210	135	28	163	47
1861	217	125	34	159	58
1862	225	123	42	165	60
1863	248	146	50	196	52

1882	412	241	66	307	105

TRADE EMBARRASSMENTS.

There were 289 failures in the United States reported to BRADSTREET'S during the past week, 28 less than the preceding week, 84 more than the corresponding week in 1882, and 123 more than the same week in 1881. The middle states had 68, an increase of 1; New England states 36, a decrease of 3; southern states 71, an increase of 2; western states 95, a decrease of 14; Pacific states and territories 19, a decrease of 14; Canada and provinces 26, an increase of 1. Although the number of failures continues to be very large, still the majority of them are those of small traders, while the few important ones are no larger than at this season last year. Among the failures of general interest were Hassinger & Brittain, wholesale hardware, and Stewart Brothers, manufacturers of cotton and woolen goods, Philadelphia; J. W. Humphrey & Co., oil well supplies, Bradford, Pa.; Shriver Brothers, produce commission, Baltimore; Fay & Conkey, wholesale grocers, Chicago; M. Eisenstadt, wholesale jewelry, St. Louis, and M. Armstrong & Son, leather and findings, New York city. In the principal trades they were as follows: General traders 63; grocers 43; clothing 18; manufacturers 15; liquors 13; dry goods 12; shoes 8; fancy goods 8; jewelry 8; drugs 8; bakers and confectioners 8; tobacco and cigars 7; hotels and restaurants 7; hardware 7; books and stationery 6; millinery 5; hats 4; coal 4; furniture 4; gents' furnishing goods 4; produce and provisions 3.

ARIZONA.

TOMBSTONE.—J. M. Vizina, clothing, has assigned.

CALIFORNIA.

BAKERFIELD.—E. P. Wheeler, general store, has been attached.

ST. LOUIS.—The liabilities of C. Conrad & Co., wholesale wines and liquors, are $543,478, and assets $407,793, consisting of cash on hand, machinery, buildings, stock and outstanding accounts'; the actual value is estimated at $150,000. Mr. Conrad has assigned to Charles E. Reuss.

ST. LOUIS.—M. Eisenstadt & Co., wholesale jewelry, have assigned to William H. Scudder, Jr., trustee. The liabilities are reported at $110,000; assets $80,000. Their settlements have not been prompt for some time past, although the firm claimed to be worth in business and real estate July 1 last $208,000. The business was founded many years ago by the late Michael Eisenstadt.

MONTANA.

SUN RIVER.—Steele & Co., drugs and notions, have been attached by Helena creditors.

NEBRASKA.

AURORA.—Meyers Brothers, furniture, have assigned, and, it is said, will pay 30 cents.

ENDICOTT.—Joel T. Mattingly, general store, has been closed on attachment.

NORTH LOUP.—John Sheldon, general store, has compromised at 90 cents.

OMAHA.—Mrs. B. Sexauer, grocer, has assigned. Liabilities, for merchandise, about $2,000; assets about $900.

OMAHA.—The Omaha Foundry & Machine Company asks an extension of three and six months. Assets of $42,000, in buildings, machinery and fixtures, are claimed.

NEVADA.

VIRGINIA CITY.—Mrs. A. Cohn, general store, has sol out and called a meeting of creditors.

NEW HAMPSHIRE.

MANCHESTER.—Alexander Drapeau, jeweler, has been attached, and is advertised to be sold out by the sheriff.

NASHUA.—Charles E. Averill, grocer, has assigned. Liabilities about $3,500; actual assets about $2,000.

NEW IPSWICH.—J. G. Adams, general store, who recently failed, owes about $6,000; nominal assets about the same.

NEWPORT.—A. A. Huntoon, grocer, owes about $1,200; nominal assets $300 in accounts.

WHITFIELD.—L. D. White, tailor, is reported to have been attached by creditors.

NEW JERSEY.

JERSEY CITY.—Charles R. Townsend, Jr., grocer, has assigned to W. C. Hutton.

NEW YORK.

ALBANY.—B. R. Spelman, toys, has assigned to M. L. Cutler. He recently mortgaged his real estate for $13,000.

AMSTERDAM.—Garoinier & McKelwain, general store, have been closed by the sheriff.

AUBURN.—Frank N. Richards, grocer, has assigned, preferring home creditors.

AUBURN.—J. P. Winters, grocer, confessed judgment to members of his family, and was closed by the sheriff.

BUFFALO.—Jacob Ansteth, varieties, is being closed out by the mortgagee. Liabilities $1,800; assets $800.

BUFFALO.—A. G. Hinkley, dry goods, has assigned.

BUFFALO.—The schedules of Charles Lehman, shoes, show liabilities $12,578; nominal assets $9,323; actual assets $4,835; preferences $5,195.

BUFFALO.—Charles A. Stark, tobacco and cigars, has assigned to J. E. Harbeck.

CANASERAGA.—W. J. Brown, grocer, has compromised at 50 cents.

DELHI.—Seth H. White, banker, proprietor of the Railway Bank, has assigned to J. B. Gleason, giving preferences for $7,000. The liabilities are reported at $65,000, mostly due to farmers in the vicinity who hold his notes. His real estate is valued at about $25,000, and it is thought he will pay about 20 cents. He is suffering from an attack of typhoid fever. He has been in business many years.

DELTA.—Joseph Kirkland, general store, has assigned.

DEPOSIT.—Ignaz Miller, clothing, has left town, and his stock is reported to have been taken by creditors.

ELMIRA.—Gallagher Brothers, grocers, etc., have become financially embarrassed and turned over their stock to W. H. Glenney & Co., of Buffalo, and afterwards assigned to John Bundy.

LE ROY.—S. T. Howard, hardware, is reported to have assigned to W. C. Donan. Judgment for $4,236 was recently entered against him in favor of The Rensselaer Oil Company.

LITTLE FALLS.—George A. Hynds, millinery, has assigned.

LOCKPORT.—F. C. Gulick, hats, who was burnt out some time ago, has recently given a chattel mortgage for $2,521, covering all the property he has left, to his wife, to secure her as an indorser.

MIDDLETOWN.—R. L. Tilton, clothing, is reported to have assigned to Ryerson R. Cooper, of Liberty.

NEWCASTLE.—Banks & Jenkins, general store, have assigned to Joseph Lewis.

NEW YORK CITY.—The schedules of Arguimbau, Wallis & Co., importer fruits and wines, show liabilities $204,436; nominal assets $183,039; actual assets $134,416. There are also contingent liabilities of $63,716.

NEW YORK CITY.—M. Armstrong & Sons, leather and findings, assigned on the 26th inst. to Matthew A. Van Winkle, a nephew of the partners. Preferences were given as follows: National Park Bank $20,000; Matthew Armstrong, trustee for John A. Van Nostrand, $15,124; trustee for E. Van Winkle $3,380; Allan E. Watson $1,950; Emma Van Winkle $3,000; Bronx Wool & Leather Company $10,000; total $83,454. The business has been established over forty years. The senior partner is the president of the Bronx Wool & Leather Company, in which the firm were understood to own a controlling interest. The liabilities are reported at over $400,000. The failure is attributed to falling off in business, large investments in the Bronx Wool & Leather Company, carrying real estate, and inability to sell their paper readily since the failure of Alonzo Follett, their note broker.

NEW YORK CITY.—John DeWilde, harness, assigned on the 24th inst. to Edward Cutts, giving a preference to Peters & Calhoun $4,293.

NEW YORK CITY.—Fuerth Brothers, cigars, assigned on the 26th inst. to Fred P. Hummel, giving preferences for $1,258.

NEW YORK CITY.—Gustave H. Gerdes, manufacturer of confectionery, assigned on the 20th inst. to John F. Gerdes, giving preferences to Rebecca Peters $4,403; Murray Hill Bank $500; John F. Gerdes $2,313; total $7,216. His factory is mortgaged for $8,500.

NEW YORK CITY.—Peter Guldenkirsch, shoes, assigned on the 26th inst. to John H. Brady, giving preferences for $723.

NEW YORK CITY.—Philip Jung, baker, has been sold out under a foreclosure of a mortgage.

NEW YORK CITY.—The schedules of William Lloyd, grocer, show liabilities $3,603; nominal assets $3,986; actual assets $1,996.

NEW YORK CITY.—The schedules of James Miller, books, show liabilities $48,215; nominal assets $36,029; actual assets $29,611.

NEW YORK CITY.—The schedules of Nelson M. Shepard, jewelry, show liabilities $26,227; nominal assets $24,567; actual assets $10,759.

NEW YORK CITY.—William R. Smith, trading as Smith Brothers & Co., hardware notions, assigned on the 25th inst. to Henry C. Adams, giving two preferences for $251.

NEW YORK CITY.—The schedules of Swan & Scoville, cider and vinegar manufacturers, show liabilities $17,787; nominal assets $16,328; actual assets $1,136.

NEW YORK CITY.—Frederick C. Tomlinson, jewelry, assigned on the 20th inst. to William Smith, giving preferences to William Smith $2,812; J. H. Renner $1,050; total $3,862. He has been in business about twelve years.

NEW YORK CITY.—W. H. Turner & Co., furniture, assigned on the 20th inst. to Richard H. Lane, giving preferences to J. L. Strachan $1,900; Hannah Turner $580; total $2,480.

SARATOGA SPRINGS.—John H. Darrow, shoes, has assigned to James R. Chapman, giving preferences for $20,000. Liabilities about $35,000. He has been in business about ten

years. The failure was caused by the refusal of friends who have been carrying him heavily to longer indorse or extend loans.

SYRACUSE.—John G. Chapman, manufacturer of rufflings, has assigned.

SYRACUSE.—Andrew W. Nauman, hats and caps, has assigned.

VICTORY MILLS.—W. H. & E. Ingerson, general store, are reported to have assigned to C. H. & R. Satwell.

WATERTOWN.—M. A. Reace, clothing, has been closed by the sheriff.

WOLCOTT.—C. P. Smith, general store, has assigned at Olean, where he is of the firm of C. P. Smith & Son. Liabilities $20,000; assets $16,000.

NORTH CAROLINA.

GOLDSBORO.—Starr & Co., confectioners, have assigned to H. B. Peters.

ELEVATION.—Barbour & Bingham, general store, have assigned.

JACKSON.—William Scull & Son, general store, have assigned.

MONROE.—J. D. Parker & Co., grocers, have assigned.

REIDSVILLE.—J. R. Hughes & Brother, general store, have failed and claimed exemptions. Liabilities $2,200.

SALISBURY.—J. F. Ross, general store, has assigned, giving preferences for $25,000.

WELDON.—The liabilities of W. R. Vick, undertaker and coach manufacturer, are about $1,800; actual assets $1,000. It is thought the creditors will realize about 50 cents.

OHIO.

ALLIANCE.—The Southern Hoe Company has assigned.

BELLEFONTAINE.—P. F. Cole & Co., dry goods, have assigned to John Reese.

CINCINNATI.—Blanche E. Cooper, formerly of Cooper & Eggleston, box makers, has assigned to J. T. Bemar.

CINCINNATI.—A. J. West, blacksmith, has assigned to W. H. Jones.

CLEVELAND.—L. H. Cohn, pawnbroker, has assigned to J. D. Hiller.

DRESDEN.—G. W. Barrows, general store, was closed by the sheriff. Liabilities reported at $4,500; nominal assets $2,000.

FREDERICKTOWN.—Alexander Keller, clothing, has failed.

IRONTON.—G. W. Silliman, queensware, has assigned.

LONDON.—Gardner & Lohr, clothing, have assigned to William Ronemus.

NEWARK.—The Fowler Manufacturing Company, heaters, has given a realty mortgage for $5,000 and assigned. It commenced in July, 1881, with a paid in capital of $7,500.

NORWALK.—A. D. Kinney, 10-cent store, has assigned to B. H. Cherry.

ROUND HEAD.—J. & R. Lyle, general store, have assigned. Liabilities $9,000; assets estimated at $3,000.

SALEM.—F. P. Dunlap, grocer, has been closed by the sheriff. Liabilities $1,500; assets about the same.

WASHINGTON COURT HOUSE.—Cyre & Co., baker are in the hands of a receiver, and executions have been levie on the stock. The prospect of a dividend to creditors is poor.

WEST SALEM.—Meyer & Hawk, clothing, have been closed by the sheriff on claims for $2,326. Liabilities $3,000; nominal assets $3,400; actual assets about $2,000.

YOUNGSTOWN.—Thomas McKee, wall-paper and stationery, has assigned.

ZANESVILLE.—H. A. Angel, general store, has been closed by the sheriff.

PENNSYLVANIA.

ADAMSTOWN.—The creditors of E. H. Coldren, manufacturer of wool hats, have agreed to accept 50 cents—25 cents cash and 25 cents in secured notes in one year. Liabilities $55,370, of which $21,122 is secured; nominal assets $32,544. He has about $11,000 to pay $34,248 unsecured debts, and says he can raise $7,000 cash in addition to complete the settlement.

BARKEYVILLE.—E. F. Vogan, general store, is said to have sold out to his father. Execution was recently issued against him by a creditor.

BRADDOCK.—N. L. Soisson, general store, has assigned.

BRADFORD.—J. W. Humphrey & Co., oil well supplies, have assigned to Henry Weiskettle. They had branch stores at Clarendon, Pa., and at Bolivar and Richburgh, N. Y. In November last they claimed to have assets $210,034, consisting of stock $46,576; good receivables $45,325; cash $1,342; stores and warehouses $6,474; personal property, oil wells, real estate, stocks and bonds $110,317; liabilities $73,578. They began in 1877, and were the local agents for The Gibbs & Sterrett Manufacturing Company.

CENTRE MORELAND.—J. S. Sickler, general store, has had execution issued against him for $943.

CHESTER.—John Wilde, grocer, has been closed by the sheriff.

COLUMBIA.—L. M. Williams, 50-cent store, is offering to compromise at 20 cents.

DUKE CENTRE.—L. A. Gottschall, grocer, has become financially embarrassed. Liabilities about $1,500; assets about $800.

ESPY.—Milnes & Waples, general store, have been closed by the sheriff.

FALMOUTH.—Execution has been issued against James S. Grimes, general store, on judgments for $2,353.

HONESDALE.—Execution has been issued against Jacob Lauer, brewer, on a judgment for $3,300.

LAYTON STATION.—H. Dial, general store, is reported to have confessed judgments for $495, on which execution was issued.

MOUNT PLEASANT.—L. S. Harbaugh, tanner, has been closed by the sheriff.

NEW OXFORD.—Ellis G. Cook, drugs, is in the hands of the sheriff

NORRISTOWN.—Judgments for $1,723 have been entered against Lewis Auchey, shoes.

PHILADELPHIA.—Abbott & Pidgeon, grocers, were advertised to be sold out by the sheriff.

PHILADELPHIA.—Joseph P. Bowman, saloon, 411 Cherry street, was advertised to be sold out by the sheriff.

PHILADELPHIA.—The widow of W. H. Cheetham, teas, etc., is offering to compromise at 30 cents unsecured, 15 cents on February 1 and 15 cents in four months.

PHILADELPHIA.—W. W. Cotterell & Co., leather belting and manufacturers' supplies, offer to compromise with creditors. T. Fitzpatrick has obtained judgment against them for $10,000. Other liabilities amount to about $8,000. They think they can pay about 40 cents, but if compromise cannot be obtained, and judgment is forced, there will be nothing left for the general creditors.

PHILADELPHIA.—Hassinger & Brittain, wholesale hardware, have assigned to D. Stanley Hassinger. The liabilities are reported at about $60,000 and assets about $40,000, consisting of stock $2,500; receivables and accounts $15,000. Mr. Hassinger was one of three heirs to the estate of his father, which was valued at $300,000.

PHILADELPHIA.—Joseph I. Irwin, coal, has called a meeting of creditors. Liabilities about $5,000; nominal assets about $4,500.

PHILADELPHIA.—Benjamin C. Naglee, lumber, has assigned to William A. Levering. Liabilities about $3,000; assets estimated at $1,500.

PHILADELPHIA.—John G. Scheible, manufacturer of awnings, etc., is advertised to be sold out by the sheriff on the 29th inst.

PHILADELPHIA.—J. W. Scott & Co., gents' furnishing goods, have assigned to Thomas W. Barlow. Recent judgments to the amount of $917 have been entered up.

PHILADELPHIA.—Charles F. Sickler, gents' furnishing goods, has failed. Judgment for $1,616 was entered against him in favor of F. Bradley, a relative. The liabilities are estimated at about $10,000.

PHILADELPHIA.—The Covenant Publishing Company (Limited) is in the hands of the sheriff. A sale is advertised for the 31st inst.

PHILADELPHIA.—The Royal Chemical and Drug Milling Company is advertised to be sold out by the sheriff on the 30th inst.

PHILADELPHIA (Frankford).—Stewart Brothers, manufacturers of cotton and woolen goods, have assigned to R. Greenwood, of R. Greenwood & Bault, dyers, and A. N. Turnbull, connected with S. Silberman & Co., yarns. Their liabilities are said to be $60,000, of which $10,000 is secured by mortgage on machinery. It is also said they show assets to the amount 66 2-3 per cent. of their unsecured indebtedness. It is thought probable that they may be able to pay about 50 cents.

PITTSBURGH.—Leoffler & Schnell, saloon, are advertised to be sold out by the sheriff.

PITTSBURGH.—The Stewart Brothers Company, manufacturers of brushes, has been closed by the sheriff, in order to settle a dispute as to the ownership of the property. It is said the creditors will be paid in full.

SCRANTON.—Execution has been issued for $1,293 against Oscar Carpenter, hotel.

SCRANTON.—James E. Keenan, bottler, is reported to have been sold out by the sheriff.

SHARPSBURG.—Execution has been issued against H. A. Yerkins, coal and lumber, for $426.

SLACKWATER.—Rudolph Shenk, grist mill, has assigned

TITUSVILLE.—G. Shamburg, oil producer, is reported to have assigned.

RHODE ISLAND.

PROVIDENCE.—The Bernon Manufacturing Company, print cloths, has defaulted on bonds which became due in October last, and a foreclosure is said to be probable.

PROVIDENCE.—Lewis Wiswall, crockery, has assigned to B. B. Hammond.

SOUTH CAROLINA.

BLACKWELL.—G. W. Price, general store, etc., offered to compromise at 30 cents, which was refused, and he assigned to Henry Dodenhoff.

CAMDEN.—John Higgins, general store, has assigned.

MARION.—A. Rosenbusch, general store, has been closed by the sheriff.

TENNESSEE.

COLLIERSVILLE.—T. F. Jones, grocer, has assigned.

DRESDEN.—Perry & Lockwood, saddlery, have assigned.

DYERSBURG.—F. M. Bowling & Co., general store, have compromised at 60 cents.

JACKSON.—Mrs. Nathan Baum, cigars, has been attached.

Selling Agents in U. S. A. for FINLAYSON, BOUSFIELD & Co., Johnstone, Scotland; and THE FLAX MILLS, Grafton, Mass.
298 DEVONSHIRE STREET, - - BOSTON.
The only Prize Medal of the London Exhibition, 1851; at Northampton Exhibition of Leather Work, 1873; at Cincinnati Exposition, 1879-'80; The Gold Medal Leather Exhibition at Frankfort-on-Main, Germany, 1881, etc., etc. Adopted by every machine on exhibition at New England Manufacturers' and Mechanics' Institute Fair, 1881 (Boston), to show the quality of work the machines would do. Did not exhibit at Paris, Philadelphia, or Charitable Mechanics' Fair, Boston, 1881.

WORSTED YARNS.
NONANTUM WORSTED CO.
Office, 5 Chauncy St., Boston.
Worsted Yarns for Cassimeres, Coatings, Dress Goods; also Knitting Yarns for hand and machine work; also Tops for Worsted Spinners.
HALL & CO.,
COMMISSION MERCHANTS,
No. 5 Chauncy Street, Boston.

WORSTED YARNS.
THE TRACY WORSTED MILLS CO. (Limited.)
OFFICE AND MILLS,
2500 SPRUCE ST., PHILADELPHIA.
Fine Worsted Yarns, suitable for Cassimeres, Coatings, Dress Goods, etc.; also Knitting and fine Zephyr Yarns, for hand and machine work.

Established A. D. 1842.
SAMUEL LORING,
PLYMOUTH TACK AND RIVET WORKS,
Manufacturer of Tacks, Brads and Nails,
Norway Iron, Copper and Brass Rivets and Burrs,
PLYMOUTH, MASS.

SHAFTING.
AKRON IRON COMPANY,
AKRON, OHIO,
SOLE MANUFACTURERS OF
PATENT HOT POLISHED SHAFTING
with magnetic oxide surface. Is round, straight, and manufactured strictly to gauge. SEND FOR PRICE LIST No. 5.

BELTING AND PACKING.
NEW YORK BELTING AND PACKING CO.,
MANUFACTURERS OF
VULCANIZED RUBBER,
Machine Belting, Steam Packing, Hose, Tubing, Car Springs, &c
No. 29 PARK ROW, NEW YORK.
JOHN H. CHEEVER, *Treasurer.*

SAFES.
MARVIN SAFE CO.,
263 Broadway,
NEW YORK.
623 CHESTNUT ST., PHILADELPHIA.
FIRE AND BURGLAR
SAFES.
An examination of our stock will repay any who wish to get the
BEST SECURITY.

BRADSTREET PRESS AND BINDERY.
We are now prepared to execute orders for every description of
FINE BINDING
IN LEATHER,
THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

TUTTLE, MASTERS & CO.,
Pig Iron and Iron Ore,
13 Atwater Bld'g, Cleveland, O.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 3, 1883.

NOTES OF THE WEEK.

As stated elsewhere, our dispatches from the trade centers of the country reveal that the marked feature in the business situation is the expectant tone consequent upon speculations as to the outcome of pending tariff legislation at Washington. At this writing it does not appear that any legislation will be enacted at the present session which will serve either to "take the tariff question out of politics" or to in anywise postpone the matter as a political issue, and this though the pending House bill were to become a law. The changes in contemplation are not sufficiently comprehensive to bring about a withdrawal of the subject from the intermeddling of the next Congress. It is believed that the only measure which will serve to take the question out of politics is one which will provide for a gradual reduction of the present excessive duties.

Our Washington correspondent sets forth elsewhere the fact of General Walker having resumed the direction of the Census Office and the more auspicious outlook as regards the completion of the census work. It seems fitting that General Walker, who began the present census and is responsible for its extent and scope, should direct the final work. It is to be regretted that, through his zeal to enlarge the work of the census, he should have brought himself and his associates under censure because of the increased cost thereof. The aim should be now to determine approximately the cost of the work yet to be done, and to insist upon an appropriation for the full sum.

The committee appointed to consider methods of increasing New York city's water supply, after going over the ground, have concluded: First, that the city needs more water; second, that the Croton watershed is the place to get it; and, third, that a new aqueduct should be begun as soon as the ways and means can be provided. This is well; but, as the existing needs of New York are extremely urgent, it is imperative that the line of action be at once determined and entered upon. It is no exaggeration to say that for some time past New York city has had to contend with a water famine, also that this famine will continue and get worse from month to month until means for an increased supply are introduced. The striking feature of the present situation is the entire absence of real responsibility in the matter. If the Board of Aldermen were a real local legislature, with full power of taxation and appropriation, the responsibility could be fixed; or, if the mayor were specially charged with the initiative in such matters he might be held to account. The seat of government is at Albany, and this makes responsibility so remote as practically to remove it altogether.

The bull combination in the stock market, which suffered a bad defeat at the close of last week, re-formed ranks over Sunday and made a gallant rally of the market on Monday. An appearance of great strength was given, which continued through part of Tuesday, when one or two of the conspicuously speculative stocks broke, and since then things have gone from bad to worse. Yesterday the stocks distinctively known as under the protection of the Vanderbilt party had a most disheartening decline, and people looking for a bull market are about discouraged.

The public debt was reduced during the month of January by a little more than $13,500,000; a sum about equal to the monthly average for the first seven months of the current fiscal year. It will be seen that if this monthly rate could be maintained throughout the fiscal year the total reduction would almost equal that of last year, and would be considerably in excess of the estimates of the Secretary of the Treasury made in November last. This state of affairs results largely from an unexpected falling off in the current expenses of the Pension Bureau. There has been something very peculiar in the workings of this bureau, especially as regards expenses. In dealing with the government balance-sheet about two months ago, we called attention to the fact that during the first quarter of the year, and before his working force was increased by about fifteen hundred clerks, the Commissioner of Pensions drew nearly one-fourth of the whole amount appropriated for his bureau. The amount then drawn represented, as we said at the time, the work of the old force. An increase instead of a decrease of the expenses of the bureau was naturally expected, and we pointed out that it was not impossible that there might be a deficiency in the pensions. But, strange to say, the pension payments for the four months since the appointment of the large force of assistants referred to have amounted to less than half the sum drawn for the first three months of the fiscal year.

The Pension Bureau has succeeded in disturbing the estimates of the Treasury Department in regard to expenditures; at least, according to present appearances. In connection with this matter it is interesting and pertinent to inquire the cause of the falling off in pension payments since the increase of the commissioner's force. At present, however, it is perhaps too early to base any predictions upon the payments thus far made by the bureau. A glance at the figures in the Treasury statement reveals the fact that the amounts paid during the last four months vary so widely that it is next to impossible to calculate what the expenses for a month will be, not to mention the much longer period of a year. For instance, the payments made by warrants for the past four months were as follows: for October $13,500, for November $8,578,755, for December $58,892, and for January $1,315,562. Under the circumstances it seems to be the prudent course to suspend judgment upon the probable outcome until the fiscal year shall be somewhat more advanced, bearing in mind, however, as we have before pointed out, that a considerable margin of allowance must be made for the more flexible appropriations, and that a wise system of public finance will not regard as constituting a surplus an amount appropriated to meet a bill or bills payable which have either not yet been presented or are even not yet due.

The monthly debt statement, just published, recalls what we have repeatedly said upon the fatuous policy of endeavoring to force silver upon the country when it is not wanted. It appears that the unwelcome coin is still being silently returned to the Treasury vaults. Before long the government will have to look for storage-room in which to pile its hoards of standard dollars. It seems that in the month of January the number of silver dollars coined was 2,450,000, or 100,000 more than the usual monthly coinage. The worse than futility of all this becomes evident when it is understood that not only have the dollars coined during the month remained in the Treasury, but nearly a million of those coined heretofore have gone in. The total number of dollars coined to February 1 was $135,405,080, of which considerably less than one-third are in circulation. How long will the unceasing and unvarying manifestation of public opinion, evidenced by the constant rejection of silver, be disregarded by the legislators at Washington?

The Richmond *Dispatch* is in a state of doubt as to the right understanding of the silver question. In a friendly manner it sends to us the following query: "If the government will only stand ready to redeem the silver coins in gold, BRADSTREET'S will, it is to be presumed, object no longer to the coinage of as many silver dollars as Uncle Sam may choose to put out." The *Dispatch* would confuse the real point of the controversy with one which is only incidental thereto. Beyond question, the government should stand ready to redeem in gold all the silver dollars it puts out; but what bearing has this upon the wisdom of continuing the coinage of bulky silver dollars which the country persistently refuses to use as money? That the continued coinage of full legal tender 82-cent silver dollars will, if persisted in, ultimately change the standard measure of values in the United States from gold to silver is as certain as that twice two make four. It is idle to speculate when this will come about—whether it is near or remote—when experience shows the utter folly of continuing in the present course. Better direct all the energy of discussion to denouncing what is going on at the mints, that public opinion may be aroused and the threatening coinage stopped.

Perhaps nothing can more strikingly illustrate the profound influence exercised over his countrymen by Gambetta than the fact that since his death the internal affairs of France have been the main subject of concern in Europe. In his death, apparently, conservative republicanism, of which in late years he had come to be the representative, suffered a severe blow. Not alone that—a panic seems to have overtaken those who for the present assume the direction of the forces so lately left without a leader. Whatever may be thought of the abilities of Prince Napoleon, he seems to have taken an accurate measure of the wits of the official representatives of republicanism if not of the strength of the republican idea itself. The action of the government since the issue of Plon-Plon's manifesto has been in the highest degree disappointing to the friends of republican principles. The arrest of the placard revolutionist was a display of weakness into which the government, under the circumstances existing at the time, should never have allowed itself to be betrayed. It gave dignity to an act which would otherwise have been merely ridiculous. The subsequent action of the authorities has tended rather to render the Bonapartist faction respectable than to strengthen the government with the people.

STATE DEBTS AND THEIR PAYMENT.

The action of the state of Tennessee in persistently refusing to honor its just obligations has aroused a fierce spirit of indignation on the part of the bondholders. The feeling has been communicated to the debtors of other states, and, as a result, a meeting was held in New York this week in furtherance of the measure laid before Congress by Representative Moore, of Tennessee, proposing an amendment to the Constitution enabling the debtor of a state to sue said state in the United States courts. In other words, it is proposed to repeal Article 11 of the amendments to the Constitution, which forbids the prosecution of suits in the federal courts against one of the United States by citizens of another state. The bondholders, under the lead of Messrs. George S. Coe, Eugene Kelly, and others, apparently believe that, if judgment could be obtained in the federal courts against the state of Tennessee, it would be possible to enforce collection through the power of the general government. It is of little use to dwell at any length upon the infamy which attaches to Tennessee's neglect of its obligations. The case is especially flagrant from the fact that every dollar of the debt of Tennessee was contracted, previous to the war, for public improvements. Moreover the state has already effected one compromise with the bondholders at 60 cents on the dollar, and is now unwilling to make good even the altered contract. Instead, the state comes forward with a proposal to still further scale down the principal of the debt. To put a worse light upon the matter, the statistics of wealth and taxation in Tennessee conclusively show that the tax-paying power of the state is abundantly equal to the burden of its obligations, and this without trenching on the bread and butter of its people. Under these circumstances it is not surprising that the patience of the state's creditors should be exhausted and that they should be casting about for some effective way of compelling Tennessee, and other repudiating states as well, to meet their obligations. To this end, as stated, it is sought to provide a way whereby the machinery of the federal courts and the power of the general government can be used to coerce Tennessee into paying its debts. The clause of the Constitution which forbids the states from passing laws impairing the obligation of contracts is held to be a dead letter in relation to state obligations so long as suit cannot be brought and enforced. So far as past experience enables us to read the future the plans of the Tennessee bondholders are impracticable. We do not for a moment believe that the repeal of the eleventh amendment can be effected. Beyond this, if the amendment were out of the way, it would not be possible to enforce judgment by any ordinary means. We cannot conceive that anything short of an act of war would be effective in the premises, and that might fail. The history of the generally fruitless attempts to compel payment of bonds from defaulting cities in the United States, by means of the writ of mandamus, suggests how idle it would be to try similar experiments with states. In relation to the debts of cities, the federal courts have uniformly refused to permit United States marshals to act as tax collectors.

It were well if some means could be devised to compel these defaulting states—notable among them being Tennessee and Virginia—to meet their just obligations. As regards the past, however, it is feared that no remedy is at hand beyond using all available means of spurring the taxpayers of the states to a keener sense of commercial honor. As regards the future, it is believed that the true remedy is to refuse to lend money to states whose credit has been in the slightest degree tainted. The truth is that, from this on, the states of the Union do not stand in any need of credits. Previous debts were contracted under the plea that this or that railway or canal or kindred enterprises needed state aid. That time has gone by, and therefore whatever may have been the necessity for state credit it exists no longer. The true policy is for the several states to go out of the debt business altogether.

AN ENGLISH VIEW OF BANKRUPTCY LEGISLATION.

As an evidence of the attention which the important subject of a bankruptcy law receives in England from those most competent to inform and direct public opinion, as well as on account of the clear statement of the principles which should govern bankruptcy legislation contained in them, some articles which have recently appeared in the London *Economist* are of interest here at the present time. That able and influential journal expresses its sense of the importance of the legislation referred to by saying that the first instalment toward the proposed commercial code ought to consist of a just and rational bankruptcy law. Passing to a consideration of the principles upon which such a law should be based, the journal referred to remarks that every sound system of bankruptcy procedure should keep steadily in view two main objects. The first great requisite in the interest both of the creditors and the public is that there should be a genuine and searching examination both into the past history and present condition of the bankrupt's affairs; that this scrutiny should be disinterested and independent, and that the proceedings from first to last should be open and above-board. In this way bankruptcy would be rendered an ordeal to be dreaded rather than a release to be anticipated. All insolvency proceedings should be begun in the court, should be continued subject to its supervision, and should be closed when and not before it has given its sanction in accordance with fixed and inflexible rules. The fullest disclosure of the affairs of the debtor should be compelled by the court, whether desired by the creditors or not. No composition should have any validity until approved by the court, and the discharge of the debtor should be a matter for judicial decision, and should not depend in any way on the indulgence or connivance of the creditors. A strictly enforced system of the kind outlined is, in the *Economist's* opinion, the only means of avoiding the devices which result in illusory compositions and other abuses which have brought discredit on the administration of bankruptcy laws.

The other great point to be attained is a speedy and inexpensive realization and distribution of the assets of the insolvent estate. This result also, the *Economist* thinks, is more likely to be attained through the intervention of a public authority than by the abandonment of the work to the uncontrolled discretion of the persons immediately interested. A curtailment of the powers of the creditors' trustee and the strict enforcement of his responsibility are the reforms here to be desired. These reforms can be arrived at only by making his appointment and his continuance in office subject to the approval of the court, and by establishing a fixed scale of remuneration for his services. Without this control and the lively sense of responsibility resulting from it, the trustee, who is in theory the creature and servant of the creditors, becomes in fact their master. Under the fee system he has besides a direct pecuniary interest in prolonging the duration of the liquidation and not unfrequently in squandering the assets. The delays, which are features of the proceedings under this system, weary out the creditors, many of whom write off their claims as bad debts, and the surplus, if any remains, falls into the hands of the trustee. To such an extent has this happened that two years ago, according to the *Economist*, no less than £5,000,000 of unclaimed dividends and assets were in the possession of trustees. These are the main reforms advocated on the civil side of bankruptcy legislation, but the London journal also wisely urges the adoption of a clear definition and classification of acts of bankruptcy, and the removal of certain variances and inequalities which have crept into the system.

A deeply interesting line of discussion is entered upon by the *Economist* in an article dealing with the criminal side of the bankruptcy law. It believes that no statute will be complete or adequate for its purpose which contents itself with securing a searching inquiry into the causes of a bankrupt's failure and a rapid and economical distribution of its assets. It points out that in the variety of causes which bring about insolvencies there must be reckoned dishonest trading and such a reckless abuse of credit as to amount to a violation by the debtor of the elementary rules of commercial morality. These abuses will never be eradicated until the fraudulent devices by which credit is procured and property collusively alienated by persons knowing themselves to be upon the brink of bankruptcy are treated as offenses of a very heinous kind under the criminal law. As the *Economist* well remarks, "there are few things more shocking to the sense of justice or more detrimental to the real interests of the community than the disproportion in point both of certainty and of severity between the penal consequences of ordinary larceny and of commercial fraud." This disparity should be removed, and dishonest debtors should be punished with the same inflexibility with which those guilty of the kindred crimes of forgery and embezzlement are now punished. The task here set for the legislature and the criminal authorities is, as the *Economist* admits, one of exceptional difficulty, but this, it adds, though a good reason for proceeding cautiously, is a very bad reason for doing nothing at all. The great defect of the present penal statute upon this subject in Great Britain, as well as of its companion measure, the Bankruptcy act, the London journal declares to be the fallacy which underlies all this legislation, the notion, namely, that the self-interest and public spirit of the creditors can be relied on both to enforce their own rights and to vindicate those of the community. The two kinds of reform, the *Economist* says, hang together, and until a compulsory examination of every insolvent's affairs is had by the court, it will be impossible to enforce laws against mercantile fraud.

FIRE UNDERWRITING IN 1882.

Earlier than heretofore, and earlier than we expected, the State Insurance Department has issued its charts covering operations in fire underwriting for the year 1882. A summary comparison may be thus made:

NEW YORK STATE COMPANIES.

	Year 1882, 66 *Cos.*	*Six months of* 1882, 69 *Cos.*	*Year* 1881, 71 *Cos.*
Assets	$56,251,273	$55,822,109	$57,856,248
Liabilities, including capital	38,768,968	38,475,389	39,647,194
Capital stock	21,937,020	22,087,020	23,157,020
Surplus	17,482,305	17,446,719	18,209,054
Premiums	22,015,498	10,959,002	22,123,051
Income	24,426,342	12,137,011	24,571,600
Losses	12,460,188	7,203,281	12,121,676
Dividends on stock	2,235,942	1,202,456	2,603,591
Total outgoes	23,334,815	12,975,020	23,509,777

OTHER-STATES COMPANIES.

	Year 1882, 56 *Cos.*	*Six months of* 1882, 55 *Cos.*	*Year* 1881, 57 *Cos.*
Assets	$75,173,614	$72,793,983	$74,362,622
Total liabilities	55,144,930	53,391,594	53,750,179
Capital	31,128,000	30,078,000	31,278,000
Surplus	20,028,684	19,399,388	20,612,443
Premiums	27,280,569	13,263,733	25,791,082
Income	30,928,970	15,030,165	29,156,662
Losses	17,664,270	9,059,614	15,726,043
Dividends	3,780,731	1,932,804	3,717,457
Total outgoes	29,825,408	16,668,979	27,897,689

FOREIGN COMPANIES—UNITED STATES BRANCHES.

	Year 1882. 28 *Cos.*	*Six months of* 1882, 27 *Cos.*	*Year* 1881. 25 *Cos.*
Assets	$32,630,306	$26,194,797	$30,046,998
Liabilities	16,822,030	14,253,112	14,575,847
Surplus	10,208,275	6,541,685	10,471,151
Premiums	24,124,454	11,189,108	18,938,822
Income	25,243,640	11,712,002	19,987,709
Losses	15,090,202	8,089,011	11,467,701
Outgoes	22,734,026	11,688,430	17,481,485

These figures of totals we give rather as a matter of record, since they are of not much practical utility. One reason for this fact is that companies are coming in and dropping out; but of more importance is the fact that all comparisons of surplus are confounded by the present most absurd practice, in the state of New York, of not taking account of "the deposits held in other states for the exclusive benefit of policy-holders in such states, which are not now allowed as assets." In all the classes of companies, especially those of New York, a decrease in surplus appears to have occurred in 1882, but how much is real is, therefore, left to conjecture. In the figures of the foreign companies, the liabilities and surplus as given, it will be observed, do not equal the assets as given; the explanation is that some five or six millions of "deposit capital held by the department" must be added in, these deposits (which are really surplus and not liability) being improperly treated by the department as if they were capital stock. [A like bit of absurdity was perpetrated by the department, prior to 1869, by the first incumbent of the office, in treating as liability the deposit exacted by law of purely mutual life insurance companies.] The years 1882 and 1881, and the first half of 1882, compare as follows in respect to the particulars named—excess or deficit of premiums as to losses and expenses, and excess or deficit of gross receipts as to gross outgoes:

	N. Y. Cos.	*Other-states Cos.*	*Foreign Cos.*
1882—Excess of premiums	$916,627	$1,244,895	$1,390,429
Deficit of premiums	.....	.....	.....
6 months, 1882—Excess of prem's.	.....	.....	.....
Deficit of prem's.	814,162	872,442	499,324
1881—Excess of premiums	1,216,867	1,611,452	1,457,337
Deficit of premiums	.....	.....	.....
1880—Excess of premiums	1,243,484	1,673,327	1,884,595
Deficit of premiums	.....	.....	.....
1879—Excess of premiums	.....	893,193	727,807
Deficit of premiums	87,454	.....	.....
1882—Excess of income	1,091,527	1,103,562	2,509,020
Deficit of income	.....	.....	.....
6 months, 1882—Excess of income.	.....	.....	23,570
Deficit of income.	838,611	1,032,814	.....
1881—Excess of income	1,061,823	1,259,573	2,566,224
Deficit of income	.....	.....	.....
1880—Excess of income	1,243,338	1,438,836	2,804,520
Deficit of income	.....	.....	.....
1879—Excess of income	.....	622,322	.....
Deficit of income	574,063	.....	1,679,216

It is shown from the above that the second half of 1882, as to the companies massed together, was much more favorable than the first. An analysis, as follows, will discover where this improvement in 1882 occurred:

		New York Cos.	*Other-states Cos.*	*Foreign Cos.*
Premiums	1st 6 months	$10,959,002	$13,263,733	$11,189,108
	2d 6 months	11,056,496	14,025,836	12,935,346
Losses	1st 6 months	7,203,181	9,659,614	8,089,011
	2d 6 months	5,257,007	7,403,656	7,001,191
Expenses	1st 6 months	4,569,982	4,476,559	3,599,421
	2d 6 months	4,068,701	4,503,845	4,044,404
Ratio of—				
Losses to premiums	1st 6 mos.	65.73	72.83	72.29
	2d 6 mos.	47.55	52.70	54.12
Expenses to premiums	1st 6 mos	41.69	33.75	32.17
	2d 6 mos	36.94	32.10	35.92
Losses and expenses	1st 6 mos.	107.42	106.58	104.46
	2d 6 mos.	84.49	84.86	90.04
Losses to prem., 12 mos		56.59	62.53	62.55
Expenses to prem., 12 mos.		39.24	32.91	31.64
Losses and expenses to premiums, 12 mos		95.83	95.44	94.19

The second half of 1882, contrary to expectation, appears to have done so much better than the first that the large excess of losses and expenses over premiums is wiped out and carried to the other side of the account, the sum of the "deficit of premiums" in the first half and the "excess of premiums" for the whole year making the excess for the second half; this reversal is also in each one of the three classes of companies. Deficits of $814,162, $872,442, and $499,324, in the first half of the year, followed by excesses of $1,730,789, $2,117,337, and $1,889,753, certainly mark a most striking change. An increase in premiums and a decline in losses—the latter in the greater degree—produced this favorable result, and, in the case of the New York companies, a decrease of expenses accompanied. The ratios of loss and expense, above given, also mark the change. The increased premiums in the second half, of course, prove an increase in risks written, but the charts leave us in the dark as to the amount written, and hence we are unable to conjecture what improvement in rates was secured, if any, although the lesson of a half-year which had loss ratios of 65 to 72 per cent. and expense ratios of 47 to 54 per cent. ought to have held reckless competition somewhat in check. In comparing American with foreign companies as respects the relation between income and outgo, the reader must again be reminded that the latter gain in such comparison by having no dividend payments. The foreign companies—that is, the American branches—may also have received, and to an unknown extent probably did receive, remittances from the home offices, as the state laws (and the present Superintendent) do not prohibit remittances from foreign-held assets, although treating such assets as misleading and useless to American policy-holders, and, therefore, never to be mentioned or "credited" here. The fact of such remittances, together with the peculiar practice already referred to as to "deposits held in other states" and "deposit capital held by the department," makes the figures of surpluses as given in the reports of no value. The figures of losses, also, are losses paid; losses incurred are a different matter, and it is of course possible that enough losses occurred late in the year and went over to modify the situation somewhat. This remark is by way of caution in drawing precise conclusions from a short term. Putting the three classes of companies together, for each $100 of premiums received $106.17 was absorbed by losses and expenses in the first six months of 1882, $86.46 in the second half, and $95.16 for the whole year, leaving 4.84 per cent. of underwriting receipts as a residuum, while a greater amount than this percentage comes to was paid in dividends by the other-states companies alone.

The following shows the number of companies which "lost money"—that is, those which paid for losses and expenses more than they received in premiums, also those which more than paid out their income:

	1882, 1st half.	1882, whole.	1881.	1880.	1879.
New York companies	44	35	25	25	39
Other-states companies	33	16	15	15	16
Foreign companies	17	11	4	3	5

COMPANIES WHOSE OUTGOES EXCEEDED INCOME.

	1882, 1st half.	1882, whole.	1881.	1880.	1879.
New York companies	46	40	31	29	46
Other-states companies	33	15	16	14	15
Foreign companies	14	7	1	1	1

Coming from summaries down to particular companies, the Empire City, Firemen's, Firemen's Trust, Knickerbocker, Long Island, National and Standard, of the New York companies, more than consumed their premiums in losses alone, in the first half of 1882; for the entire year the sole delinquent in this respect was the Firemen's. Among other-states companies delinquents by this test were, in the first half, the Firemen's, of Baltimore, United Firemen's, of Philadelphia, and four Boston companies, the Mercantile, Neptune, Prescott, and Shoe & Leather; for the whole year the United Firemen's is the only one in this class so far unfortunate. In the first half, the North German and the Queen were the only foreign companies with a loss ratio of 100 per cent. or more; for the whole year no foreign company shows such a ratio. The North River, of New York city, shows a loss ratio of 8.8 in 1881, 1 per cent. in the first half of 1882, and not quite 3½ per cent. for the year.

As it is impracticable to reproduce any portion of the tables given in the chart issued as a supplement to BRADSTREET'S on January 13, and covering the forty-two months ending June 30, we give below a schedule of companies which, for the entire year 1882, spent for losses and expenses more than their premiums, together with the excess of gross outgoes over gross income; by comparing this schedule with the chart it can readily be determined how much any of the sixty-two companies included in the schedule of unfortunates did worse (or perhaps better) in the second than in the first half of the year. Some companies which were in column 6 of the chart may, of course, have done worse in the second six months, without retrograding far enough to reach the list of unfortunates; this we could not show without constructing an additional schedule. Companies which were in column 7 of the chart and are not now found in the schedule, it will be understood, improved enough since July 1 to take their names out of the undesirable list.

* Excess of income over outgoes.

NOTE.—The companies not in this list saved over something from premiums after paying losses and expenses. In some cases (which are indicated) companies in this list did not expend in all ways their entire gross income in 1882. The following companies, which are not in the list, *did* so expend more than their gross income: Buffalo, Mechanics' & Traders', North River, Peter Cooper, Union—all in New York state.

BRITISH METALS IMPORTED IN 1881 AND 1882.

Recently received copies of the British Board of Trade returns for 1882 furnish interesting data respecting British iron, steel, tin and other metals imported into the United States during the twelve months mentioned. The recent outcry by those who are "leaving no stone unturned" to induce Congress to adopt the Tariff Commission's metal schedule, and to prevent the tendency toward reductions in the Senate, have failed to hint in the public prints that our importations of iron and steel were less in 1882 than in 1881.

The following exhibits, compiled from the elaborate British reports of exports of metals, just received, are in somewhat different form from that in which they have formerly been published, and will repay careful attention:

	1882. Tons.	1882. Values.	1881. Tons.	1881. Values.
Steel rails	173,876	$5,756,175	194,001	$6,664,110
Iron rails	21,135	612,470	96,139	2,760,870
Totals	195,011	$6,368,645	290,140	$9,424,980

It appears, therefore, that the imports of iron and steel rails from Great Britain fell off 95,129 tons in 1882 against the total for 1881. The decline in shipments of steel rails was 20,125 tons, and of iron rails was 75,004 tons. The reduced value of imports of iron and steel rails in 1882 as compared with 1881 was $3,056,335, or $2,148,400 on imports of iron and $907,935 on imports of steel rails. The totals in the table, in connection with estimates recently published as to the total production of steel rails in the United States in 1882, offer a close approximation to the total quantity of rails placed on domestic markets. The figures are as follows:

	Tons. 1882.	Tons. 1881.
Imported steel rails	173,876	194,001
Home-made steel rails (estimate)	1,300,000	1,250,000
Imported iron rails	21,135	96,139
Home-made iron rails (estimate)	250,000	437,000
Totals	1,745,011	1,937,140

This gives an apparent falling away in the requirements for 1882 of 192,129 tons of rails. The decrease, it may be noted, was divided pretty evenly between imported and domestic rails; for while, as estimated, there were probably about 97,000 less tons of rails manufactured in the United States in 1882 than in 1881, the decreased imports amounted to 95,129 tons, thus giving an aggregate decrease, as stated above, of 192,129 tons.

The receipts of British tin and tin-plate and sheets were as follows:

	1882. Tons.	1882. Values.	1881. Tons.	1881. Values.
Tin-plate and sheets	214,552	$18,595,390	179,843	$15,197,365
Tin, unwrought	16,191	435,165	7,731	183,660
Totals	230,743	$19,030,555	187,574	$15,381,025

The increased receipts of foreign tin-plates, sheet and unwrought tin amounted, therefore, in 1882, to 43,169 tons, valued at $3,649,530. The gain in imports of tin-plates and sheets in 1882 over 1881 was 34,709 tons, or over 20 per cent., valued at $3,398,025. Unwrought tin imports more than doubled, as may be observed.

Lead imports, including pig, rolled, sheet, piping and tubing, were less in 1882 than 1881. The figures are, for 1882, 576 tons, valued at $42,275, against 599 tons in the preceding year, valued at $46,785, a decrease of 23 tons of lead and of $4,510 in value.

The imports of unwrought steel have likewise fallen away, the totals for 1882 being 131,177 tons, valued at $5,665,525, against 135,268 tons in 1881, valued at $5,560,380. In this instance it will be noted that, although there has been a falling away of 4,091 tons of unwrought steel, the value of last year's receipts exceeded that of the preceding year by $105,145.

The total imports of iron, including iron and steel rails and excepting steam engines, machinery, millwork, hardware and cutlery, were as follows:

IMPORTS OF IRON FROM GREAT BRITAIN.

	1882. Tons.	1882. Values.	1881. Tons.	1881. Values.
Pig iron	487,697	$8,272,900	394,934	$6,830,010
Increase	92,763	1,442,890	....	....
Bars, angles, bolts & rods	22,255	881,110	18,858	780,395
Increase	3,367	100,715	....	....
RR. iron—iron & steel rails	198,278	6,547,780	292,617	9,562,160
Decrease	94,339	3,014,380	....	....
Hoops, sheets, boiler, armor & galv'd plates	37,220	1,662,540	36,162	1,503,380
Increase	1,058	159,160	....	....
Cast, wrought & other manufactures	6,791	507,930	6,163	451,415
Increase	631	56,515	....	....
Old, for remanufacture	94,710	1,844,765	99,859	1,976,090
Decrease	5,149	141,325	....	....
Totals imports	846,954	$19,717,025	848,593	$21,103,450

The loss in imports in 1882 as above was therefore 1,639 tons as against the receipts in 1881, and the decreased value of the same was $1,386,425.

The value of the imports of British hardware, cutlery, steam engines and other machinery and millwork, was as follows:

	Values. 1882.	Values. 1881.
Imports hardware and cutlery	$2,546,585	$2,570,675
Machinery and millwork (steam engines)	465,130	278,110
Machinery etc., other descriptions	2,672,350	2,219,990
Totals	$5,684,065	$5,068,775

Judging solely from values of the last-named imports our cutlery and hardware manufacturers enjoyed slightly less competition from British rivals in 1882 than in 1881. Our demand for foreign steam engines for factory and mill work has evidently increased, as the value of imports of the same in 1882 nearly doubled those in 1881. Other descriptions of that class of manufactures have likewise exhibited increased imports, but much less in amount.

It is safe to say that the three lines of British iron manufactures last mentioned have come here in obedience to demands which did not heed tariff rates. They were mainly wanted for special purposes or to meet particular tastes. In discussing increased or decreased imports of British iron and steel, therefore, they need not enter into the exhibit. Summarizing and bringing together the total quantities and values of strictly iron and steel imports during the past two years, we find the following:

IMPORTS OF BRITISH IRON AND STEEL.

	1882. Tons.	1882. Values.	1881. Tons.	1881. Values.
Total imports iron and rails	846,954	$19,717,025	848,593	$21,103,450
Total imps. unwrought steel	131,177	5,665,525	135,268	5,560,380
Totals	978,131	$25,382,550	983,861	$26,663,830

The decrease then was 5,730 tons of iron and steel as enumerated, and the value $1,581,280. The heavy increase in imports of tin-plates was to be expected, as were those of foreign pig iron, which is largely used for special purposes in mixing with other grades of American irons. A few more bars, angles, rods and sheet iron than came over in 1881 were received last year, but the excess is not alarming to even those who feel the most disturbed at increasing importations.

The steady decrease in imports of British iron and steel, omitting tin-plates, has been continuous from 1880. In that year the total quantity received was 1,193,969 tons; in 1881, as shown above, 983,861 tons, a decrease of 201,108 tons, and last year 978,131 tons, or 215,838 tons less than in 1880. It is the growth in receipts of tin-plates which makes an apparent gain, the imports of the same having advanced from 164,167 tons in 1880 to 179,843 tons in 1881 and 214,552 tons last year.

OCCASIONAL NOTES.

We have to apologize to the *Globe-Democrat* of St. Louis for attributing to it, through a slip of the pen, a ridiculous treatment of the silver question, instead of to its local contemporary, the *Missouri Republican*. The error is especially regretted for the reason that the position of the *Globe-Democrat* on the silver question is in accord with the facts and sound reasoning, while that of the *Republican* is just the reverse. The traditions of the latter are of the Tom Benton school of finance. It has been, therefore, a constant source of surprise that the *Republican* should have its vision so obscured as to be unable to see that 18 per cent. of the silver dollar is fiat money, and that if the present rate of coinage is continued indefinitely the effect will be to substitute silver for gold and thus depreciate the standard 18 per cent.

The following urgent call to the friends of protection in the United States is conspicuously printed in the current number of *The Bulletin* of the American Iron and Steel Association, which is edited by Mr. Swank, the secretary of the association: "The time has fully come for representatives of the producing industries of the country which are directly affected by tariff legislation to throw off all lethargy, to dispense with all modesty, to put aside all business engagements, and to exercise all their energies in a united and determined effort to convince Congress that the proposal of the Senate to reduce duties below those recommended by the Tariff Commission is rapidly destroying the prosperity of the country and precipitating a financial revulsion of the most serious consequences. The time has come for all manufacturers and the workmen whom they employ to hold mass meetings in their respective localities to protest against the reckless trifling with the industries of the country which now has such full sway at Washington. Let the people express in no uncertain terms their condemnation of the suicidal tendencies of the hour. Let them appoint committees to proceed at once to Washington to represent the depressed condition of general business in consequence of the attempts that are being made to unduly reduce duties, which attempts if successful would destroy our leading industries and rob millions of the opportunity to earn a livelihood. Congress is being deceived and misled by the concerted clamor of leading newspapers which are owned and edited in many instances by Englishmen who have no American sympathies, in other instances are in direct receipt of English money, and in still other instances are edited by trimmers and cowards who pretend to be protectionists. These newspapers, both Democratic and Republican, falsely allege that the result of the late elections was a defeat of protection and a verdict in favor of lower duties. Let Congress be undeceived by those who have the intelligence to correctly represent the facts. The people of this country have not abandoned their faith in our protective policy. Show to the friends of protection in Congress that you look to them in this emergency to stand by the interests of the people against all

assaults which may be made upon them for the benefit of English manufacturers. We again urge instant action. The danger is imminent."

Were it not for the fact that matters touching the pocket of that much abused being, the taxpayer, have a very serious aspect, we would be tempted to rank the revelations lately made concerning the expenditures of investigating committees in the state of New York with the humors of legislative history. The fact was made known in the report of the State Controller that certain "humble servants of the people," as the phrase runs about election time, had—perhaps while engaged in the endeavor to ferret out abuses and to discover means of "retrenchment and reform"—lived at a cost of twenty dollars per day for each member. We are reminded of Seneca's homilies on poverty written on tables of gold. An assemblyman, perhaps of a reforming turn, and apparently impressed with the weighty facts disclosed by the report of the Controller, requested from the latter's deputy a statement of the amounts paid from the state treasury during the last five years for investigations authorized by the legislature. Before the legislator in question made any use of the information furnished the statement asked for was given to the public at large. Concerning the contents of this not very dry official paper, it may be remarked that the statistics of investigating committee expenditure reveal a fact of which it is as well that the public should be advised, namely, that election to the legislature results in a striking improvement in personal taste and in generosity. In the bills furnished to the state for the sustenance of its "potent, grave and reverend seigniors," there is a cheerful and gratifying recurrence of the names of choice brands of wine, while the mention of the more humble "beer" is sporadic and infrequent, startlingly so, indeed; a fact which we suppose must be attributed either to sanitary considerations or to the laudable desire on the part of the legislators to maintain the dignity of the state even in their cups. A wish to add lustre to the honorable fame of the state for hospitality we suppose it was which prompted the representatives to invite constituents or others to share in their repasts. From documents bearing on the question it appears that the very social custom prevails among legislators of eating their committee dinners in company with outsiders. At times, as is revealed by the records, one of these outsiders has sat down at table for every committeeman, making the number to be fed just double. Of course the expense connected with all these genial habits is charged to the state. And now some meddling persons will suggest that an investigation of investigating committees is in order.

Instances have not been infrequent in which official interventions based upon insufficient knowledge or hasty consideration have worked badly and in which regulations adopted under such circumstances have been rescinded upon more mature reflection or upon a closer acquaintance with facts. Such a case is found in the recent change of the rules for passing signals of steamboats on the Mississippi, Ohio and other western rivers. Some time ago, it appears, the old rule formerly followed by pilots on those rivers, and established by them before any rules were adopted by authority, was changed by the Board of Supervising Inspectors at Washington. The change caused a great deal of annoyance to the pilots, and many of the collisions were attributed to this cause. On the petition of a large number of pilots the old rules have been reëstablished to the great satisfaction of the pilots and other steamboat men running upon the rivers in question.

The *Railroad Gazette* remarks, concerning the proposition to appoint a railroad commission in Indiana, that that state alone, of all those west of Pennsylvania as far as Kansas and Nebraska, is without either a commission or any state reports. A reason for this is found in the fact noted by the *Gazette*, that most of the Indiana roads have to report in adjoining states, as there are very few railroads exclusively in Indiana and not many with headquarters there. It appears that, with few exceptions, the railroad men do not oppose a railroad or the railroad commission proposed in the bill introduced in the legislature, and some of them even favor it. The *Gazette* expresses the opinion that a majority of the railroad managers of the country favor commissions with authority like that possessed by the Massachusetts commission, for the reason that it has become evident to most of them that the railroads are likely to suffer from grossly unjust legislation so long as there is no well-informed public authority representing the people which will be able to see the injustice of such legislation and advise against it. The railroad men, it says, may prefer to be wholly without restrictions, but they prefer to be subject to constant investigation and criticism by a body of men who will have an opportunity to learn something as to the necessities of railroad business rather than suffer under laws at once oppressive to them and injurious to the public. There can be no doubt that, whatever may be the effect of increased publicity, considered from the point of view of the railroad managers, the results to the public at large cannot fail to be in the highest degree beneficial. Indeed, in view of the circumstance that in the future shares in corporate enterprises of this character are likely to be sought for as investments, a considerable amount of information concerning the financial standing and operations of these companies may be regarded as a necessity.

The manifesto of Prince Napoleon, a copy of which has been published here, is a curious and interesting document. He calls the attention of his fellow citizens to the number and the weakness of parties in France, and the resulting want of stability and energy in the government evidenced in the frequent collapses of administrations. He finds a vulnerable point in the shortcomings of the financial system, which, he forgets to add, is a legacy from the short-lived empire of his relative. It can scarcely be denied by the most earnest friend of the republic that its foreign policy has of late been disappointing. Its attitude in relation to the Egyptian question has certainly been weak and vacillating, and no doubt the relative of the great First Consul finds a bitter pride in referring to a land where the founder of the dynasty found glory if not success. The discontented prince relies upon the magic of a great name—the same influence that won the throne for the "nephew of his uncle." He makes the rather theatrical statement that he is the only man living whose name has secured seven million three hundred thousand votes. The sublimity aimed at in this large statement readers of taste will regard as having been lost through too great devotion to the odd three hundred thousand. Most people will readily believe the melancholy prince's declaration that he has been waiting in sadness for the time when the course of events should call for him. The point of the address is contained in the declaration that there are two principles dividing the world—one admitting a right superior to the will of the people, the other putting the source of all power in that sovereignty. These principles, he says, are in conflict in France, and the Napoleons alone defend the direct sovereignty of the people. The manifesto closes with what most people will regard as a satiric touch. One can hardly imagine that the domineering and contemptuous soldier who founded the line meant in any other than a Pickwickian sense the declaration, "All that is done without the people is illegitimate."

SPECIAL CORRESPONDENCE.

THE WORK OF THE CENSUS.

Washington, January 31.—General Walker has again taken hold of the census, and it is expected that order will be brought out of confusion, and the work pressed forward to early completion. That is the belief and hope of Congress, and of all connected with the bureau in a situation to know its wants. It has been authoritatively given out that the real cause of the confusion which for some months has existed in the Census Office should excite pity rather than censure. The officials of the bureau say—now that the fact has become generally known—that Col. Seaton, the Superintendent of the Census, who is now threatened with serious illness (which may result in softening of the brain) has, for a year, not been a well man, and that to this illness is to be attributed the state of things which has given rise to so much censure. Under these circumstances the public, of course, will withhold further unfavorable comments, and look to General Walker to rescue, and complete, the work begun under his energetic administration.

Meanwhile, it is possible to obtain from official sources the exact condition of the census work, and to put at rest any disquieting rumors which may have been based upon inadequate information. The matter for the Compendium, which was but recently placed in the hands of the Public Printer, is being rapidly printed, and, if the facilities of the Government Printing Office will permit, it is expected to place bound copies of the Compendium in the hands of Congress as early as the 10th of February, although it is not to be expected that the entire edition of 100,000, which was authorized by law, will be published during that month. The first work will be to complete this Compendium. The work will then be resumed upon the quarto volumes of the census which for some time have been delayed. This delay has been due to the fact that the appropriations were exhausted. The work which remains to be done, according to a statement made by the census officials, is as follows:

First—General statistics relating to age and sex; agriculture; manufactures; occupation and mortality. The work on these subjects will consist of the arrangement in tabular forms for the quarto volumes of results already attained in the preparation of the Compendium, together with all computations consequent upon the more elaborate and detailed presentation of these subjects in the quarto report. These computations and tabular arrangements having been completed there will remain for these subjects only the preparation of such text as may be devoted to a discussion of results. For this grouping it is estimated that the sum of $50,000 will be required.

Second—Completion of reports of special agents on the following subjects:

Fire and marine insurance in the United States.
Private schools, libraries and churches in the United States.
Defective, dependent and delinquent classes of the population.
Wages paid in manufacturing industry.
Forestry and lumbering industry.
Cotton culture in the United States.
Cotton manufactures and ginning.
Resources of Alaska.
Social statistics of cities.
Power used in machinery and manufactures.
Statistics of the Indian tribes.
Tobacco manufacture.
Statistics of orchard fruits and hops.
Fisheries of the United States.
Mining in the United States, east and west of the one hundredth meridian—two reports.
Wealth and taxation.

These reports, all commenced, some well advanced, and the greater number nearly finished, will be completed and ready for the printer within four months. It is estimated that for this branch of the work the sum of from $20,000 to $25,000 will be required.

Third—General work of preparing all reports, tables, illustrations, maps, etc., as copy for the printer, with revisions, proof-reading, etc. For this will be required the sum of from $12,000 to $15,000.

Fourth—Superintendence, organization, correspondence, etc. For this the sum of say $6,000 is estimated.

From this it will be seen that there is still a very considerable amount of work to be done. The $100,000, which has just been voted, will, of course, not be enough to complete the work above indicated. In fact, the $100,000 is required to meet the immediate deficiency in the current fiscal year. A very much larger sum will be necessary to finish the work above summarized. Certainly $100,000 more will be necessary for the next fiscal year, beginning with July 1, and it is very doubtful whether that sum will be sufficient. The Compendium of the tenth census, it may be stated, will be an octavo volume of 1,800 pages.

It is estimated that the following sums will be necessary to complete the works referred to:

Statistics of the mining industry east of the Mississippi river, Professor Raphael Pumpelly special agent in charge	$540
Statistics of the mining industry west of the Mississippi river, Mr. G. F. Becher special agent in charge	200
Statistics of the fisheries of the United States, Professor G. Browne Goode	200
Social statistics of cities, Mr. George E. Waring, Jr., special agent in charge	1,000
Statistics of Indians not taxed, Major J. W. Powell	5,000
Statistics of forestry and the lumbering industry, Professor C. S. Sargent special agent in charge	1,500
Statistics of power and machinery used in manufactures, Professor W. P. Trowbridge special agent in charge	500
Statistics of defective, delinquent and dependent classes, Mr. F. H. Wines special agent in charge	6,000
Statistics of cotton culture, Professor E. W. Hilgard special agent in charge	1,500
Statistics of fire and marine insurance, Mr. Charles A. Jenney special agent in charge	1,500
Statistics of schools, churches and libraries, Dr. H. R. Waite special agent in charge	5,000
Statistics of orchard fruits, hops and the manufacture of tobacco, J. R. Dodge	500
Statistics of the manufactures of glass and coke, and wages in manufacturing industries, Mr. J. D. Weeks special agent in charge	500
Statistics of ship-building, Mr. Henry Hall special agent in charge	250
Statistics of Alaska, Mr. Ivan Petroff special agent in charge	150

Some of these works, it is expected, will be completed within two months. Others will require four months for their completion. The Census Office has 20,000 pages of manuscript ready for the printer, equal to 6,000 printed pages, and by the time these shall have been printed it is expected that 15,000 additional pages will be ready. The manuscript upon the following subjects has not yet been received from the agents: Population, part II.; occupations; manufactures; agriculture; foreign parentage; gas; cotton manufactures and ginning; cotton culture of the Indian Territory and Missouri; cotton culture of South Carolina; glass and coke and wages; production of the precious metals; mining east of the one hundredth meridian; ship-building; steam craft and canals; social statistics of one hundred and forty cities; quarries, general statistics; quarries of Ohio and Kentucky; tobacco manufacture; orchard fruits and hops; Indian tribes; defective, delinquent and dependent classes; education, libraries, schools and churches; postal telegraph. The total amount expended on the census to date is $4,551,596.

INDIA AND THE SILVER QUESTION.

London, January 18.—It has been said already that the fall in silver recently recorded has stimulated the export trade of India, which had begun to languish as it became subjected to the keener competition of American cotton and wheat. At the same time there can be no doubt of the check to the exports of English manufactures to India and China, which may also be ascribed to the fall in silver. The way this fall operates upon the merchant shipper in this country is plain enough. Thus, 8¼ pound shirtings being quoted at 4 rupees in Bombay, it is apparent that a fall of ¼d. in the value of the rupee would make a difference of 1d. upon the 8¼ pounds of goods, equal practically to ⅛d. per pound, and ⅛d. per pound on cotton goods means all the difference between a handsome profit and a considerable loss. Hence, if the English merchant for his 8¼ pound shirtings asks 7s. 1d., the Indian price must be raised to the extent of nearly one anna to cover the depreciated value of the rupee in English money and the cost of shipment; the anna, by the way, being equal to the sixteenth part of a rupee. But at the same time, with silver falling sharply, Indian buyers were afraid that before they could get their goods out to India a further depreciation would occur, and thus it was that the heavy fall in silver during December brought the exports of cotton goods down considerably. It is always difficult to trace such a movement immediately in the Board of Trade returns, because so much of a month's shipments are due to previous orders in course of fulfilment; but, making allowance for this, it will be gathered from the export returns for December that the shipments of cotton goods to India were depreciated as much as 15 per cent., those of December, 1881, a comparatively poor month, being valued at £1,838,000, while those of December, 1882, were valued at only £1,557,000. The probability is that the January returns will show quite a similar falling off, as a relic of the stagnation in trade during December, and that apart from the consideration of what the January fluctuations in the silver exchanges may bring forth. In other items as well as cotton the exports of Great Britain to India suffered in December, but it is useless to apply the test to, say, manufactured iron, which could only have been shipped in response to orders given out some time previously.

It is worthy of remark that India has been required to absorb a considerably increased quantity of silver in the past year. It is not enough to say that from London and Southampton during 1882 there was shipped £5,662,000 worth of silver as compared with £4,079,000 worth during 1880–81. First of all it must be borne in mind that China was far less disposed than usual to purchase silver or to absorb Mexican dollars. In fact during the whole of last year we only sent £437,000 worth of that metal to Chinese ports. To India, however, our exports of silver amounted to £5,986,000, against only £3,391,000 in the previous year, showing an increase of £2,595,000, while at the same time there was shipped from Venice upwards of £2,000,000 worth of silver for the East, against nothing in the previous year, and this item found its way mainly into India. Including some exports of this metal from China to India in the course of the year it may be confidently said that India received in 1882 fully £5,000,000 more of this metal than was the case in 1881, thus more than doubling her silver imports. It could hardly have been otherwise under the circumstances, than that when Mexican dollars came pouring into this country in December, coupled with a large amount of silver from France, the Indian exchanges should have fallen, as the country did not want all this metal. But there is no doubt that the action of the India Council greatly aggravated the situation. They delayed drawing their usual bills on India until the final four months of the financial year, and it then appeared that they had to remit home something like £9,000,000, which they did by selling to the Indian banks here for sterling, bills on India payable in rupees. As soon as they commenced forcing the market they found that it fell away from them yet more rapidly, and in December, if it had not been that some substantial orders arrived from Spain for silver, it is probable that there would have been something like a panic in the market, during

which the Indian exchanges would have been further depreciated.

At the beginning of January the silver market and the Indian exchanges steadied, first because it was found that any very serious depression would bring buyers from the continent, and secondly because the prices current here for Indian produce, when they came to be measured in rupees, showed a substantial rise. Thus it will be seen that the effect of a fall in silver, and consequently in the rupee exchange, is to arrest British exports to India and to augment their exports to Great Britain, thus turning the balance of trade quickly against this country, and as that balance has to be paid for in silver, the tendency of such a depreciation is, in the long run, to create an increased market for the metal, and the one movement has a tendency to counteract the other.

We may rest quite assured of this, that had it not been for the serious depreciation in silver when Germany began her sales of melted coin, India could not possibly have absorbed the vast amount of that metal which she did in 1876–77; but the depreciation in the rupee tends to make the country a more eager importer, and it would be the same way with the countries possessing a gold coinage, if at any time, or for any reason, gold were suddenly to be depreciated. If, for instance, the dollar were to fall 25 per cent.—that is to say, if its purchasing power should be reduced to that extent—then it is very certain that the people of the United States would require immediately a very much larger number of dollars to transact their ordinary business, while for the same reason, if the value of the dollar were appreciated to a like degree, then a smaller number of dollars would suit the requirements of the community. Thus it was that when silver fell 15 per cent. India became ready for another 15 per cent. of rupees to fill up the vacuum, and bimetallists would always have to face the fact that if they gave India back this 15 per cent. of value to her present depreciated silver coinage, Europe would have to deal with the disgorgement from India of something like a similar amount of metal. On the other hand, should a fall of a few pence per ounce in silver be recorded, there would be the certainty of India becoming a larger buyer. Of course trade tends to affect the demand for silver for the East, but the fluctuations in the exchanges operate so directly upon the volume of trade itself that it may be said they are almost inseparable. In 1872 the merchandise exports from India were £55,250,000, whereas in 1881 they were £81,900,000, but the imports show no corresponding expansion.

PILOT CHARGES AND TOWAGE AT SAN FRANCISCO.

San Francisco, January 22.—Among the bills before the California legislature is one to abolish compulsory pilotage and to reduce pilot dues 40 per cent. This bill is called for by the pressing exigencies of the case. With the single exception of Bombay, the port of San Francisco is the most expensive place for shipping in the world. The harbor is manipulated in the interest of rings, and it will, indeed, be surprising if the legislature, constituted as it is, should consult the public interest when there is money on the other side. It is past dispute that it costs a seagoing ship an aggregate of $5 per ton to enter and leave the port. The pilot and tugboat monopoly have formed a close partnership for extortion and division of charges upon shipping, and the burden has at last become too heavy to be borne. The only possible hope of relief is in the legislature, and this is by no means an assuring one, in the teeth of the interested opposition of the rings.

There are twenty licensed pilots, who have what practically amounts to a life office, and they have four pilot-boats, three of which are in commission, the fourth being in reserve for fear of accidents. These boats are owned by five or six of the pilots. Their value, at an outside estimate, does not much exceed $8,000 each—say, $35,000 all told—yet in the last four years and nine months their owners received from pilotage $140,000 as the percentage of profit accruing for their use from the general fund. This may appear incredible, but it is true. In other words, the San Francisco pilot-boats paid their original cost every year since 1877.

But this does not nearly present the worst features of the case. Last year's pilotage amounted to about $200,000, according to figures furnished by the pilot commissioners, but there is good reason for believing it was considerably more. Taking it at $200,000, however, this would give each of the twenty pilots $10,000 for the year's salary, less the *pro rata* for hire of pilot-boats. But the pilots do not divide that amount among themselves. When the bill promoted by the pilot ring was before the legislature it was opposed by the tugboat men, who had influence enough to defeat it. A bargain was struck, however, the pilots agreeing to pay the tugboat monopoly 30 per cent. of their gross earnings, which reduces the earnings of those not interested in the pilot-boats to between $400 and $500 net monthly for services, a great portion of their time being passed ashore. The law has been in operation fifty-seven months, during which the pilot commissioners admit the receipt of $737,043.57. It is easy, therefore, to compute the amount of the pilotage extortion which is the price of this corrupt legislation. Of course "the lobby" was paid, but this was not a serious item when the receipts are considered. This ring, having grown fat upon the spoils, will make a strong fight to retain their present hold upon the foreign and coasting trade. The towage monopoly is in itself an incubus not easily shaken off. It has either bought or subsidized all opposition boats upon the Pacific coast which could be made available, and several years ago, when Boston shipowners threatened to send out an opposition tug, their opposition was headed off by the concession of special rates. The towage for the largest class of vessels frequenting the harbor ranges from $1,000 to $1,400, according to the points to which it may be necessary to shift them for discharging and loading cargo. Instances have occurred in which the pilots dropped anchor inside in a position necessitating the services of a tugboat, but this was in cases in which the vessels were not towed in. If towed, and without a pilot, the law exacts half pilotage. The pilot dues for a ship of 2,000 tons, drawing 25 feet of water, is $205 inward and $205 outward. When a vessel is spoken inward or outward bound, and the services of a pilot are refused, half pilotage is charged. These are a few of the beauties of the present system, which levies $5 per foot draught on all vessels under 500 tons, and $5 per foot draught and 4c. per ton registered measurement additional upon all vessels of 500 tons and upward.

A joint meeting of the members of the Chamber of Commerce, Board of Trade and Ship-owners Association of California, was held on the 19th, at which these facts were brought out, and a strong memorial to the legislature was adopted, sustaining the bill pending. It further sets out the fact that at the present rates of ocean freights—which are not likely to increase owing to railroad opposition—ship-owners cannot afford to pay the charges imposed upon shipping, and therefore that vessels will avoid the port, to the serious detriment of its commerce, and the injury of farmers and the producing classes generally. It denounces the pilot and tugboat monopolies as being jointly engaged in plundering the shipping, and expresses the hope that the legislature will demonstrate by prompt and vigorous action the falsity of the scandalous charge, that the corrupt use of money by the pilots and their associates can succeed, as heretofore, in defeating the will of the sovereign people. Time will tell, however. Should the bill pass it would reduce the pilot's income to $200 a month net, which is ample, and put a stop to the piratical war against the shipping interests of California, which is waged incessantly under the beneficent guise of pilot and tugboats.

It should be mentioned in this connection that the firm which is practically at the head of the tugboat monopoly has established a water monopoly as well. It pays the Spring Valley Water Company $20,000 a year for the exclusive right of supplying the shipping, and charges the vessels, which are compelled to buy the company's water, $1 per 100 gallons. Their profit upon this transaction is enormous. Dock dues and wharfage, collected by the Harbor Board, are likewise excessive, and tend to retard the prosperity of the port. The mercantile body is keenly alive to the importance of this question, but its solution depends upon politicians, and these have a way of always looking at the golden side of the shield. The promoters of the bill do not put up money to carry it; its opponents, on the other hand, will not be wanting in metallic arguments to defeat it, Should it become law it will be an evidence that public opinion is not wholly disregarded at Sacramento. New York clippers would derive considerable advantage under the proposed schedule of pilotage. An opposition tugboat company has been organized, but it will probably go the way of all similar enterprises heretofore. Where combination is possible opposition cannot continue. What is wanted is to regulate towage charges by law, as is done with railroad freight and fares, to prevent extortion and abuse.

At the annual meeting of the Chamber of Commerce the retiring president congratulated the members upon the great increase in the coast trade, and denied that the completion of the Northern Pacific Railroad and connecting lines would injure San Francisco. The working of the Hawaiian treaty, he said, had received the approbation of the mercantile community generally. Trade with Mexico was steadily expanding. Referring to the Australian trade, President Babcock said: "Business between this coast and the Australian colonies is steadily increasing, owing to the monthly service of the Pacific Mail Steamship Company. No doubt could this service be made semi-monthly it would be of vast profit to this country. The present mail contract between the colonies and the Pacific Mail Steamship Company will soon expire, and unless our government grants a fair subsidy to this company it is feared the contract will be awarded to one of the numerous lines now running via the Suez canal." Congress does not appear to have taken any notice of this very important commercial question.

San Francisco, January 26.—A joint committee of the legislature sat in this city yesterday and investigated the pilotage charges. The facts presented were worse than those in the foregoing statement. It appears that for twenty years past the pilots have had an arrangement for dividing their collections with tugboat owners; and the last agreement, drawn up and signed in due legal form, was produced. It covenants that the tugboat monopoly shall receive 55 (fifty-five) per cent. of all outward pilotage, "earned or collected," for two years and three months from December 31, 1881, except such dues as may be collected from the Pacific Mail Steamship Company, or from their steamers, the Occidental & Oriental Steamship Company, or from their steamers, and from national ships. It transpired from the evidence that the two companies named have special agreements with the pilots of a very favorable character, as have also Goodall & Perkins and Claus Spreckles. Mr. Spreckles paid no outward pilotage upon his sailing vessels. Mr. Crawford, who appeared before the committee to represent the ship-owners, described these discriminations as illegal because the law does not recognize or sanction special contracts, and he declared that a reduction of from 50 to 75 per cent. from the legal charges might well be made. Two recent wrecks on the Farallones, thirty miles from the heads, were caused, in his opinion, by the neglect of pilots to go far enough outside and pick up ships. Similar testimony was given by Mr. Meyer, of Rogers, Meyer & Co., and Captain Roberts stated that he had been obliged to give up ship-owning in San Francisco through the extortion of the tugboat monopoly. He had been charged $650 for one hour and forty minutes' work by towboats in fine weather, thirty days before, for which $40 was ample remuneration.

The contract between the pilots and the tugboat monopoly is a curiosity in its way. For the sum of $1 in hand the pilots agree to give the tugboat owners 55 per cent. of all outward pilotage with the exceptions noted, conditional upon the tugboat owners aforesaid maintaining an efficient steam service and charging their own schedule of towage rates, which they retain for themselves exclusively. The contract further stipulates that the tugboats shall not be required to furnish towing hawsers to vessels which they undertake to tow. The working of this stipulation was explained by Captain Jolliffe, "port admiral," the executive officer of the pilots. He said: "The towboats charge $50 to $75 for the use of a hawser, and won't be responsible for the ship if the ship furnishes its own hawser." The towing schedule is: For vessels of 500 to 1,000 tons, $300; 1,000 to 1,400 tons, $400; 1,400 to 1,800 tons, $500; above that, special rates. The tugboat monopoly was paid $44,590 commission on outward pilotage last year, and earned about half a million dollars for towage. Through these flagrant discriminations and extortions the shipping of San Francisco is fast being concentrated in a few hands. Competition is impossible against such a ring.

The legislative committee suggested that representatives of the commercial bodies and the pilots should meet and draft a bill which would be satisfactory to all parties. Grain ships pay 75 per cent. of all the pilot dues. To-day has been spent by the legislative committee investigating the charges levied by the Harbor Board, which is a state institution. One suggestive point about the pilotage question was the real or assumed ignorance by the Pilot Commissioners of matters which clearly fell within the scope of their duties.

SLAVE LABOR AND SUGAR-GROWING IN QUEENSLAND AND FIJI.

Melbourne, December 10.—One of the questions agitating colonial society is the labor problem. More especially is this the case in Queensland, whose tropical climate renders outdoor employment, involving manual labor, unsuited for average Europeans. What is known as the "Northern Territory" of the colony of South Australia, is in a similar predicament with regard to labor, but settlement is sparse, and there are no established industries at present. The soil, however, is very productive, the climate, although tropical, is healthy, and in the course of a few years, doubtless, the want of field labor will be felt there also. South Australia, however, has rather encouraged Chinese immigration; its late governor, Sir William Jervois, being very partial to coolies, he having been transferred to Adelaide from the Straits Settlements where Chinamen practically perform all the labor and monopolize nearly all the business. He has just been promoted to New Zealand, where he will encounter different conditions and an energetic Anglo-Saxon community which discountenances coolie labor.

The case of Queensland, however, is exceptional in some respects. Originally part of New South Wales, it was settled by squatters from the parent colony and Victoria, who there found limitless pastures for their cattle and sheep. They succeeded in securing an autonomous government for a vast territory occupied only by a few herdsmen and traders and the aborigines, who in that part of Australia are fierce and warlike and pretty numerous. Their first step was to adopt the principle of responsible government, but a revenue was needed to support a constitutional governor and court, together with a miniature of the British Parliament, civil service, judicial and police systems. Revenue could not be had without people, and people could not be induced to come without land. Accordingly free immigration was established and a liberal land law was passed. This had the desired effect for a time, and when spontaneous immigration stopped, that unfailing colonial specific, borrowing, was resorted to, and railroads and telegraphs were constructed, bridges built and public buildings erected. This lavish expenditure induced immigration once more. Gold was discovered, and with its discovery came the inevitable Chinaman, elbowing the white adventurer at every turn, and thriving where the white man perished.

Next came the agricultural era. It very soon became manifest that unless the soil was cultivated the country could not be permanently prosperous. The American civil war gave an impetus to cotton cultivation, and it looked for some time as if cotton would become king; but the irrepressible conflict ended as all sensible men foresaw it would, and Queensland cotton planters were discouraged. Sugar cultivation was next tried. The great difficulty was in procuring cheap labor. This difficulty, however, was partially overcome by an organized system of "kidnapping," under the Polynesian Laborers' act, 1868, passed by the Queensland Parliament. Vessels were chartered and sent to the Polynesian islands to secure labor, force and strategy being indifferently used by the ruffians who engaged in this traffic. Every colonial port was represented in this nefarious business, as were also the American, French and German nations. It would be impossible to overstate the infamous atrocities of that unbridled period of slave-gathering. A few incidents only were published, the colonial authorities preserving a discreet silence on the subject. Suffice it that all the "horrors of the middle passage" were reproduced in the South seas within the past twenty years.

Ashore the treatment of the islanders was nearly as bad, until the Queensland government interfered. But practical reform was only compassed when the islanders began redressing their own grievances. They had only one way of doing so, namely, by killing all white men who visited their island; and so it happened that the missionary bishop of Melanasia, the Rev. Dr. Patterson, with his companion, the Rev. Mr. Atkins, a native of Auckland, and several more belonging to the missionary schooner, were slaughtered in revenge for the atrocities of the man-stealers, while subsequently Commodore Goodenough and several of his men were similarly butchered in sight of their ship. This naval commander was one of the most sincere friends the savages had, and with his dying breath he ordered his officers not to retaliate. Thus precious lives were wasted as a result of the man-stealing policy of the Queenslanders. Conflicts between the traders, or slavers, and the islanders were of common occurrence, and occasionally an English war-ship would "chastise" an offending village, that is to say, after giving due notice to the natives to get away, fire was opened on their palm-leaf huts which contained nothing of value. When the ship sailed they returned more emboldened than ever.

The affair grew to be a national scandal, and on the remonstrance of the imperial government the Queensland Parliament passed an act in 1880 bringing the labor trade under the control of the

colonial government. A government agent now goes on board each labor vessel, whose duty it is to prevent kidnapping and to explain to all natives taken on board the terms of service and the nature of the agreement they are asked to sign. Of course, there is the doubt whether these labor agents are wholly disinterested and trustworthy, and certainly some of them are not. For example, last June Captain Madezo and a black man named Tom, both British subjects, were convicted at Noumea, the capital of the French settlement of New Caledonia, of murder and kidnapping in the South seas, although the labor agent of the government swore that Captain Madezo's dealings with the natives had been legally and morally right. It is clear that this man was in collusion with the trader, and that he deserved punishment as an accessory. He was not punished, however, although Madezo was sentenced to four years' and the black to eighteen months' imprisonment. A similar ordinance was enacted in Fiji during Governor Gordon's administration, and is still in force in that dependency. The Imperial Parliament likewise passed the Pacific Islanders' Protection act, and Sir Arthur Gordon was appointed High Commissioner of the Western Pacific, as well as Governor of Fiji, possessing in both capacities almost autocratic powers. A number of small cruisers were built in Australia for the admiralty and put in commission as cruisers to suppress the Polynesian slave trade. The commander of one of these preventive ships was killed recently by the Solomon islanders, who cannot be expected to distinguish between friends and enemies among the whites. The result of these precautions has been to bring the labor traffic in the South seas under control; but there are still many glaring abuses, and owing to representations made by Sir A. Gordon and Commodore (now Admiral) Wilson, late of the Australian station, the Imperial government has appointed a commission, of which both gentlemen are to be members, to inquire into the working of the Polynesian labor traffic.

The point arises here whether a commission so constituted is a fair one. Sir A. Gordon and Admiral Wilson are certainly prejudiced against the employment of island labor in any case and under any conditions, as the official records of Fiji, New South Wales and Queensland abundantly show. The admiral, in his official report, suggests the enforcement of very stringent rules, but declares that nothing except the entire prohibition of native labor, can possibly stop the evils of which he complains, and he describes the condition of the laborers in some cases as being worse than that of the slaves under Europeans and Americans. This is an exaggeration, however, despite supporting allegations by Mr. John Wisker, in the *Fortnightly Review*, of London, and the *Victorian Review*, of Melbourne. Mr. Wisker is an extremist, and is disposed to magnify points to which he objects. His statements regarding the brutal treatment of colored labor in Queensland at the present day have been satisfactorily answered by Dr. Francis M. Harricks, in the *Victorian Review*. The Polynesian laborers are very much better off now as a rule in Queensland than ever they were before; and many of them return after the expiration of their three years' term and enter upon a new contract. Quite a number elect to remain altogether. It is clearly the interest of the sugar-planter to treat his laborers well, because he is compelled to provide medical attendance in case of sickness, and a trained hand is always the most valuable. Many of them, however, lack physical stamina, and soon sink under even a slight ailment. Feeling sick, they often lie down and die. This is the case with new hands only; men of experience act otherwise.

Sir Arthur Gordon introduced 500 East India coolies into Fiji, and did his best to prevent the recruiting for South Sea Island labor. The unvarying testimony of Fiji planters is in favor of the islanders and against the coolies, who possess all the vices of the Chinese, and are unreliable in every way. He also discouraged white settlement, even going so far as to declare that "Fiji is not a white man's country." While he did this, however, he prevented the employment of native Fiji labor which, till then, had been abundant. He imposed a forced labor tax upon the natives, who are compelled to work in government plantations, and sanctioned the "lala" custom—that is, the right of the chief to take whatever he pleased from his tribesmen—besides making them provide large supplies for the annual "vei boses," or gathering of the chiefs. And lastly, being converts to Christianity, they must work to support the church, which is sustained almost wholly by their voluntary contributions. It will be evident, therefore, that when the Fijian has paid his dues to church and state and his hereditary chief, he has little time to devote to his own affairs. He is as poor as Job on the ash-heap, and, as a consequence, has become an incorrigible liar and beggar. The natives everywhere speak of the bad government—*sa tha matanitu*—when they are free from espionage, and the settlers heartily echo the sentiment. Before annexation the natives sold land to white men who settled among them; after British supremacy was established a land commission was appointed to inquire into these titles. Much of the land was taken from the whites, but instead of being given back to the natives as they had been led to believe, it was sold by the colonial government and the proceeds treated as revenue. This was the course pursued in New Zealand while it was a crown colony like Fiji.

The labor problem, however, is an economic one, and a very important one it is. Although Queensland has imposed a tax upon the Chinese, it has flooded the country with black labor, which works at a rate of pay upon which a white man could not possibly subsist. It is infinitely worse than Chinese labor in that respect. Mr. Wisker says: "Maryborough, for example, is almost a 'black town.' The Polynesians swarm there. They form the great proportion of the hands on all the sugar plantations, and as they have no money to spend the shopkeepers and others are obliged themselves to employ Kanakas in order to cut down expenses. The islander may be seen working about the gardens, sweeping out the shops, cooking meals, and even washing babies and putting them to bed. Everybody seems anxious to get hold of a servant who has a body to be kicked, if he have not a soul to be saved; who can be made to eat anything; who works for the most miserable wages, and who very often dies off conveniently before those wages are due." The small farmers are opposed to the wholesale introduction of Polynesian labor, and declare that sugar can be profitably grown without it; the large planters aver that cheap labor is essential to success. As early, however, as April, 1877, the evil of unrestricted cheap labor was recognized, and the executive council of Queensland adopted a minute in which attention is drawn "to the absolute necessity for placing some restriction upon the indiscriminate employment of Polynesians throughout the colony." The minute continues: "When the Polynesian Laborers' act of 1868 was passed it was merely intended that the introduction of these laborers, which was considered necessary for the purpose of stimulating certain tropical and semi-tropical industries—principally the cultivation of cotton and sugar, which were then in a languishing condition—should thereby be controlled and supervised. The introduction of these laborers during the last few years has, however, assumed such proportions that their employment by squatters and others throughout the whole colony as shepherds and domestic servants has had the effect of displacing and throwing out of employment a very large number of European hands, which, in the face of the efforts now being made by our immigration lecturers in England to encourage immigration to the colony, is altogether irreconcilable."

Nevertheless, the Queensland government, which is in the hands of the large land-owners, winked at the continuance of the labor traffic until it has attained an alarming magnitude, acting as a bar to spontaneous colonization from Europe. The large planter, by the use of labor-saving machinery and servile labor, is gradually crushing out the small freeholders in Queensland. With their extinction will follow that of the white artisan and small storekeepers, leaving only a rich upper class and a substratum of colored contract laborers—slaves in everything but name. In justice to the Queensland press it should be added that several of the newspapers present this view of the case. The process is going on in that fine British country which was inaugurated by the introduction of the cotton gin in the southern states of America, and which reduced the "poor whites" to the very lowest condition of degradation. Contract Polynesian labor in Queensland is paid £5 a year, with food and clothing; in Fiji it ranges from £3 ($15) to £5 ($25). The diet is strictly vegetable and is raised on the place. The crop, under proper cultivation, averages from 3 to 3½ tons of sugar per acre—a yield which should leave ample margin to pay higher wages. This, however, is the labor which is being crowded into tropical Queensland and Fiji, and into the supply of which the British government are about to inquire.

LEGAL NOTES.

One of the most interesting questions discussed before the Supreme Court of the United States of late is that as to what extent a corporation is a "citizen," or a "person," within the meaning of the Constitution and of the federal laws passed in pursuance of that instrument. Some earlier decisions were to the effect that a corporation was not in its corporate capacity a citizen within the meaning of the provisions of the Constitution conferring jurisdiction upon the federal courts, and that the right of a corporation to litigate in those courts depended upon the citizenship of the individuals composing it. Later, however, it was held that a corporation created and doing business in a state was an inhabitant of the state, capable of being treated as a citizen for all purposes of suing and being sued, although some of the members were not citizens of the state. This latter doctrine has been further developed in the case of The Chicago & Alton Railroad Company vs. The Wiggins Ferry Company, decided on the 29th inst. This suit was originally begun by the Wiggins Ferry Company against the Chicago & Alton Railroad Company (both companies being Illinois corporations) to recover damages for the breach of a contract, by which, as alleged, the railroad company bound itself not to employ any other means than the ferry company's ferry for the transportation of passengers and freight coming and going on its railroad across the Mississippi river at St. Louis. The case was removed to the Circuit Court of the United States for the Eastern District of Missouri, and by that court remanded to the state court in which it originated. An appeal from the order remanding the case was taken to the Supreme Court of the United States, which affirmed the order, holding that the suit was not one arising under the Constitution or laws of the United States within the meaning of the act allowing the removal of causes arising between citizens and aliens, or between citizens of different states, from the state to the federal tribunals.

The nature of a pension and the right to double pensions were under discussion in the case of The United States ex rel. Burnett vs. Teller, Secretary, etc., also decided by the Supreme Court of the United States on Monday last. It appears that Burnett, by virtue of a special act of Congress passed March 3, 1879, was in receipt of a pension of $50 per month. Under the provisions of the general pension laws of 1872, 1874 and 1880 he became entitled to a pension at a higher rate, and in July last a new pension certificate for $72 per month was issued to him under the general law. He afterward returned to the Secretary of the Interior his fifty-dollar pension certificate under the special act, and offered to relinquish the same. Later he claimed that in giving up the certificate he had acted unadvisedly, and he petitioned the Supreme Court of the District of Columbia for a writ of mandamus to compel the Secretary to return it to him, and to pay him the pension under the special act, in addition to that received by him under the general laws. The court applied to refused the writ of mandamus, and the plaintiff took an appeal to the Supreme Court of the United States. That court holds that the right of the relator to double pensions, if he ever had such a right, has been cut off by section 5 of the act of July 25, 1882. That act it was competent for Congress to pass for the reason that no pensioner has a vested legal right to his pension. On the contrary, pensions are the bounty of the government, which Congress has the right to give, withhold, distribute or recall at its discretion. The relator's contention that, having received the pension of $72 under the general law, he is also entitled to the pension of $50 granted him by name in the special act, is declared to be unfounded.

A decision of interest, involving the point whether the holders of hypothecated railroad stock are liable for the debts of an insolvent railroad company, was rendered by the same court in the case of Burgess vs. Seligman et al., executors. This was a suit brought by the plaintiff in the Circuit Court of the United States for the Eastern District of Missouri against Seligman and others as stockholders of the Memphis, Carthage & Northwestern Railroad Company, under a statute of the state of Missouri, to recover a debt due to him by the company. The plaintiff alleged in substance that in 1874 a judgment against the corporation was rendered in his favor in a court in Kansas, which remained unsatisfied at the time suit was brought; that shortly after the recovery of the judgment mentioned the corporation was dissolved, and that the defendants at the time of the judgment and of the dissolution were, and to the time of suit brought continued to be stockholders of the corporation to the amount of $6,000,000, on which $1,000,000 was due and unpaid. The principal defendant, Seligman, denied that the defendants were ever subscribers to or stockholders of the corporation, and set forth facts and circumstances showing that the stock alleged to be theirs was merely deposited in their hands by the corporation, in trust, for a temporary purpose by way of collateral security, and was to be returned when the purpose was accomplished. The findings of fact were in the defendants' favor, and they had judgment in the court below. The question on the writ of error was whether the facts found were sufficient to support the judgment. The Supreme Court held that they were; that the defendants held the stock in question as trustees and custodians by way of collateral security for themselves and the purchasers of the bonds, and that they were not liable for the debts of the company.

The Albany *Law Journal* has a note of the case of Kamarowski vs. Krumdick, decided by the Supreme Court of Wisconsin on October 31, 1882, and which reaffirms a well settled and salutary rule in the law of agency. It was held in this case that an agent to buy wheat or other grain must, in order to bind his principal, who furnishes in advance the funds to make the purchases, buy for cash, unless he has express power to buy upon credit, or unless the custom of the trade is to buy upon credit; and in the absence of express authority, or proof of the custom of the trade to buy on credit, such agent cannot bind his principal by a purchase upon credit of a person who is ignorant of his real authority as between himself and his principal. The power to sell, in other words, implies a power to sell in the usual way, and the right of an agent acting under such a general authority to sell upon credit depends upon the fact of that being the usual mode of dealing in the particular trade in question.

In the same journal is reported the case of McKinney vs. Jewett, decided October 24, 1882, in the New York Court of Appeals, in which the question was much discussed as to what circumstances will relieve common carriers from their liability as such, and render them subject only to the lesser liability of warehousemen, for goods transported by them and stored in their stations. The defendant's company, a railroad, transported a quantity of hams from Chicago to Binghamton, which latter place was reached in due season, on Thursday. A cartman of the consignees inquired for the hams on Thursday and Friday at the freight office, but was told that they had not arrived. Notice of the arrival of the goods did not reach the consignees until half-past five o'clock on Saturday. The railroad shipping bill provided that the company should not be liable as a common carrier while the goods were at any of its stations awaiting delivery to the consignee, and that during such period the company should be liable only as a warehouseman. It also required freight to be removed from the cars "during business hours." The consignees, assuming that no time remained in which to remove their freight during what remained of business hours after half-past five on Saturday, waited over Sunday and unloaded the hams on Monday, when they were found to have been injured by the heat and the delay. It was held, by the Court of Appeals affirming the judgment of the court below, that the terms of the shipping bill did not release the carrier from liability for negligence, and that a carrier's liability, in the absence of special contract or of custom, makes him an insurer until delivery, and remains until the property is actually delivered at its destination, or until notice is given to the consignee and the expiration of a reasonable time for its removal. The court said that the condition in the shipping bill relieving from liability while the goods were awaiting delivery, meant that after the goods had arrived and the carrier had given notice to the consignee at a time which furnished reasonable opportunity to him to get them, then the carrier's responsibility as such ended, and then, and not until then, were the goods "awaiting delivery." The carrier in this case, it was held, remained liable as such until after the hams were injured, and was liable for such injury. The rule laid down by the court is somewhat more stringent than that applied in Massachusetts, Indiana and Illinois, but is in line with previous decisions in New York and with the current of opinion in the Michigan and Wisconsin cases.

In rendering his decision, in the United States Circuit Court at Boston, on the 24th inst., in the suit of the Bell Telephone Company against the Dolbear Telephone Company, and in granting the injunction asked for by the former company, Judge Gray took the ground that Mr. Bell was the first inventor who successfully used the electric current for the transmission of articulate sound. The essence of the invention consisted not merely in the form of apparatus used, but in the general process or method of which that apparatus was the embodiment. Notwithstanding some differences of detail claimed to exist between the two telephones, the proprietors of the Dolbear telephone availed them-

selves of Mr. Bell's discovery that undulatory vibrations of electricity could intelligently and accurately transmit articulate speech, as well as of the process which he invented and by which he reduced his discovery to practical use. The use of this general process or method the judge held to be an infringement on Bell's patent which should be restrained by injunction.

BUSINESS NOTES.

An international exhibition of the products and apparatus connected with brewing is announced to be held at Saaz, Bohemia, in Austria, one of the principal European hop markets.

The Russian Steamship & Trading Company have ordered two steamships in Newcastle, to cost £70,000 each. One is nearly finished, and the other will be ready to launch next year. They will run between Vladivostock and Odessa, calling at Japanese and Chinese ports. It is intended to add a new steamer to the line each year.

There has appeared in Spain of late a renewed interest in wine production. Recent publications in that country in relation to viticulture are said to be specially adapted to younger and non-expert readers, illustrated with cuts, and containing much data useful to the vine-grower. The practice of adulterating wines is severely dealt with.

An industrial and agricultural exhibition will be opened at Lisbon, Portugal, under royal patronage, in May, and continue for two months. It is a purpose of the managers — the Royal Agricultural Society and others—to make a special effort to bring into publicity the qualities of Portuguese woolen manufactures and Portuguese wines. The usual concessions in railway fare are made to exhibitors.

The Japanese export trade at the middle of December continued practically stagnant. The import trade had also declined. As a result there had been less call for silver dollars, and their value had, therefore, declined as compared with paper currency. Small shipments of tea were being made to San Francisco. The results of the season's shipments of teas to the United States are reported to have been unsatisfactory to the exporters. The total sent here is estimated at 2,000,000 pounds less than in the preceding season.

The stock of the recently held Denver mining exposition has passed into the hands of a private corporation which, on the authority of the *Republican* of that city, will hold a second exposition, beginning on July 17 and closing October 31, 1883. The present management believes that a permanent exposition can be established at Denver and made of such special interest during sixty days of the year as to draw visitors from all parts of the country and from abroad. Steps have already been taken in this direction, whereat Denver is to be congratulated.

The Philadelphia *Iron and Steel Bulletin* states that the production of Bessemer steel ingots in the United States in 1882 amounted to 1,696,450 net tons (or 1,514,687 gross tons), against 1,539,157 net tons in 1881, an increase of but 10 per cent. The rates of increase in preceding years was much larger, being 28 per cent. from 1880 to 1881, and 30 per cent. from 1879 to 1880. The actual production of Bessemer steel ingots in the United States during the past six years, in net tons, was as follows:

1882	1,696,450	1879	928,972
1881	1,539,157	1878	732,226
1880	1,203,173	1877	500,587

The total number of failures in the United Kingdom reported to *Kemp's Mercantile Gazette* for the week ending January 13 was 213, against 200 in the first week of January and 139 in the concluding week of 1882. There were 213 failures also reported in the second week of January, 1882. Scotland had 7 in the second week of last month, against 13 and 7 respectively in the same week in 1882 and in 1881; Ireland had 1, against 5 in the week mentioned in 1882. The grand totals, therefore, were 221, against 231 and 237 in corresponding week in 1882 and in 1881.

Those of our readers who were interested in the letter from Vienna, published in BRADSTREET'S a few weeks ago, which related to the Roumanian and Hungarian petroleum fields, their stage of development and prospects, will be further interested to learn that a joint-stock company has been formed in Berlin to exploit the Roumanian oil fields. The Manchester *Guardian* states that the German Bank, the firm of J. T. Goldberger (late Erlanger & Sons), Messrs. Sulzbach Brothers, the German Union Bank and the Crédit Mobilier Roumain are concerned in the enterprise.

An English trade circular comments on the growing consumption of rice throughout the world in the face of the generally increasing production, and in this connection on the "unusually low level of prices maintained," which sooner or later must engage the attention of speculators. It is added that arguments might be advanced why such a course would lead to profitable results. European imports of rice in 1882 amounted to 720,619 tons, and the total export and consumption to 742,597 tons. Great Britain exported 210,393 tons, against 176,432 tons in 1880 and 195,544 tons in 1878.

The season's ice harvest on the Hudson river, according to the Albany *Journal*, is one of the largest, if not the largest, ever gathered, aggregating 3,000,000 tons. The increased storage capacity along the Hudson is reported at 200,000 tons. Over 100,000 tons of ice were carried over from last year, nearly 50,000 tons of it being of the crop of 1880. This surplus is noteworthy in view of the short ice crop last season, when it was expected that the supplies would be exhausted. Doubtless the metropolitan public will have forgotten these figures in four or five months, and the companies will again charge high prices on an alleged basis of shrinkage of stocks or some other plausible story.

The London *Labour News* of January 17, states that the British labor market shows activity, and that work for navvies on new railway contracts and in building is plentiful. Further improvement is recorded in the linen manufacturing trades at Barnsley, in hardware at Birmingham, and in general lines of manufactured iron. The Sheffield tool works are very busy, the principal demand being from Australia and the United States. In the textile trades there is apparent activity and good export orders are being received. The Kidderminster carpet trade is in a better condition, and there is an increasing demand for worsted yarns. Canada is ordering considerable quantities of "fancy goods" at Leicester. Manchester, China and India shirtings were unaltered at the date named.

The present prospect is that the Chicago Exhibition of Railway Appliances, to be opened May 24, will prove of great interest. Over one-half the space in the exposition building has already been applied for, and permission has been secured to build an annex. Tracks will be laid from the lines adjoining the lake directly into the exposition building in order to facilitate the receipt of cars and locomotives intended for exhibition. An electric passenger railway one-third of a mile in length and a model gravity road to carry passengers will be operated over a distance of 100 feet. Appliances for space come from every state and territory and from most foreign countries in which railways are operated, and the complete success of the exposition is regarded by those most interested as assured beyond question.

The labor market, so to speak, in the United States during the past week has not gained any strength. The combination of circumstances which induces or permits several leading lines of manufacturers to curtail production naturally enables them to resist with more success any demands from employés which have been or may be made for improvement on wages or hours. The glass works which recently had trouble with their men have resumed operations. The Pennsylvania coal miners, who threatened a strike if they did not receive 4c. instead of 3½c. for mining, have not succeeded in coercing their employers, and there are evidences of weakness in the position taken by New England's discontented mill operators and iron workers. At Castle Garden it is stated that the demand for male labor has greatly fallen away and the supply far exceeds existing calls for help. The demand for domestic servants (females) continues heavy.

The Constantinople *Eastern Express* states that the Turkish government has "granted a joint-stock company a concession" for turning Lake Tchekmedje, near Constantinople, into a seaport. Quays, dry-docks and workshops for repairing vessels, etc., are to be built. There will be a line of small steamers run to and fro between the lake and the capital of the empire, and a service of tugboats to tow sailing vessels into the new port. New customs houses will also be constructed and the subsidized company will build them. In commenting on this the Paris *Bourse* finds fault with the picayune policy of the concession, and alleges that Turkey cannot hope to draw European capital by making concessions to petty enterprises of this character. On the other hand, it asserts, if the Porte will lend liberal aid to large enterprises, such as "the tobacco business," the Roumelian Railway and Asia Minor Railway construction, "he will enjoy the benefit of European sympathy, and the money would be forthcoming to convert Turkey into a vast building yard, carrying with it prosperity to the remotest part of the empire."

The London *Daily News* states that a member of the British consular service is about to visit the principal Mexican trade centers and will report on the commercial condition of that country. The editor of the *News* admits that there can be no doubt that British trade has suffered from the rupture of diplomatic relations between the two nations. While the tour of investigation noted is in no way a part of a plan to restore them by Great Britain, the hope is expressed that the sending of British consular representatives to Mexico may be an outcome. The growth of the trade between Mexico and Germany and the United States of late years has, as is well known, not been shared by Great Britain except in a small way as to railway supplies. The generous subsidies granted to capitalists in the United States to build railways in Mexico are said to be due to the anxiety of Mexicans to develop their material resources. Not unnaturally, it is added, they (the Mexicans) are jealous of the influence which the United States are acquiring. The *News* adds that when "once direct railway communication between Washington and Mexico City is established," Mexico will be dependent on the United States, for it will feel "that at any moment the United States can pour troops into its capital." Therefore, it is concluded, "the Mexican government is anxious to encourage the investment of English capital in Mexico as a counterpoise to American influence."

Andrew V. Stout, president of the Shoe & Leather National Bank, has resigned the office held by him for about thirty years, and J. M. Crane has been promoted to the presidency. The Corn Exchange Bank has elected William A. Nash president in place of William A. Falls, who resigned on account of ill health. Daniel Chauncey, president of the Mechanics' Bank of Brooklyn, is dead. The Jefferson County National Bank of Brooksville, Pa., has elected J. B. Henderson president. The National Bank of Boyertown, Pa., has elected D. L. Rhoads president in place of T. J. B. Rhoads. The Burgettstown (Pa.) National Bank has elected C. Campbell president in place of J. L. Proudfit. The Continental National Bank of Boston has elected W. T. Hart president in place of O. Ditson. The First National Bank of Baltimore has elected J. A. Sprigg president in place of W. E. Hooper. The First National Bank of Abilene, Kan., has elected J. E. Bonebrake president in place J. Jointz. The First National Bank of Auburn, Ind., has elected C. A. O. McClellan president in place of G. Plumb. The First National Bank of Alameda, Cal., has elected Conrad Liese president in place of L. Jenks. The National Bank of Athens, Ga., has elected A. K. Childs president in place of J. White. The Stock-growers' National Bank of Cheyenne, Wyo., has elected Thomas Sturgis president in place of J. M. Carey. Gebhart, Harnan & Co, bankers, of Dayton, Ohio., have sold out to the City National Bank. The following national banks have been organized: The Gap National Bank of Gap, Pa.; capital $50,000; Joseph C. Walker president; C. Himes cashier. The First National Bank of Baker City, Ore.; capital $50,000; David P. Thompson president; Rollin J. Reeves cashier. The First National Bank of Wellington, Ohio; capital $100,000; S. S. Warner president; R. A. Horr cashier. The First National Bank of Honey Grove, Tex.; capital $50,000; Young Burgher president; T. U. Cole cashier. The First National Bank of Owentown, Ky.; capital $63,000; J. W. Johnson president; N. H. Witherspoon cashier.

The British Board of Trade returns for the calendar year 1882 are at hand, and exhibit a prosperous year's business, on the basis that prosperity increases in the same ratio that a country's purchases exceed its sales, and not its sales its purchases, as is sometimes declared in the United States. The total value of British exports for 1882 was £241,477,156, against £234,022,676 in 1881, an increase of £7,454,478 on the year, or, calling £1 equal to $5, the increased exports were valued at $37,272,390. The last year's British imports were valued at £412,001,683, against £396,773,350, a gain of £15,228,333, or $76,141,665. The year's business, therefore, stands as follows:

	1882.	1881.
Total value imports	£412,001,683	£396,773,350
Total value exports	241,477,156	234,022,676
Excess value imports	£170,524,527	£162,750,674

The gain in excess of imports in 1882 over that of 1881 has been, therefore, £7,773,853, or about 4.8 per cent. of the excess of imports over exports in 1881. But while the total value of exports in 1881 was but 60 per cent. (roughly calculated) of the total value of imports, in the succeeding year the ratio was nearly the same. Of the leading classes of exports the gains and losses in values thereof were as follows:

INCREASED EXPORTS, 1882.

Minerals, etc	£6,398,556
Farm produce	1,121,001
Sundry manufactures	1,221,253
Unenumerated goods	986,041

DECREASED EXPORTS, 1882.

Textile manufactures	£2,050,520
Chemicals, etc	192,853
Net gain	£7,454,478

The increases and decreases in values of goods imported in 1882, as compared with 1881, were as follows:

INCREASED IMPORTS, 1882.

Minerals, etc	£2,054,644	Flax	£200,944
Farm produce	1,575,561	Jute	346,559
Food produce	17,420	Silk	155,257
Sundry manufactu's	302,453	Sundries	4,350,952
Chemicals, etc	636,414	Unenumerated	3,119,831
Cotton	2,091,262		

DECREASED IMPORTS, 1882.

Textile manufactures	£26,006
Hemp	4,056
Wool	291,848
Net gain in 1882	£15,228,383

The summary of the year's increase in British exports in 1882 was, to the whole of Europe, £2,650,253; to India, Australia, Canada and other British possessions £5,228,572, and to the United States £1,509,752, or, in all, a gain of £9,388,577. The decrease "to the outer world" was £1,934,099, leaving a net gain of £7,454,478.

NEW YORK CHAMBER OF COMMERCE ON THE SILVER QUESTION.

The Chamber of Commerce of the State of New York respectfully represents:

That in the month of February, 1878, Congress passed a bill for the remonetization of silver. It provided for the coining of a minimum monthly amount of $2,000,000 and a maximum of $4,000,000. The standard fixed was 412½ grains troy of standard silver. That President Hayes returned the bill with his objections thereto. He pointed out that the silver dollar of that weight was then worth 8 to 10 per cent. less than it purported to be. That on the 28th of February, 1878, these objections were taken into consideration, and the bill passed over the President's veto. That the experience of five years has justified the opposition made to the bill. That down to the 1st of November last 128,000,000 of standard dollars have been coined under this law, of which nearly 93,000,000 remain in the Treasury. That every effort has been made to force the coinage into circulation. That all these efforts to increase the circulation beyond a limited amount have failed, and the coin increases in the Treasury month by month, as appears by the following extract from the Treasury reports:

STANDARD DOLLARS IN THE TREASURY.

September	30, 1878	$12,155,205
"	30, 1879	31,806,774
"	30, 1880	47,784,744
"	30, 1881	63,092,667
October	31, 1882	92,946,000

That the coinage of vast quantities of these dollars not required in circulation tends to great evils. First—It offers a great temptation to pay the obligations of this country in money of inferior value. Second—It tends to make the Treasury balance monometallic and exclusively silver. Third—At any time when the balance of trade may turn against this country it will tend to force gold to a premium, disorganize the currency, and decrease the value of real estate and every form of investment. Fourth—The amount at present represents either an ultimate loss of $12,000,000 to the Treasury if retained, or a loss of that amount to the holders if the coin should be forced into circulation. Fifth—The law offers a market for all the unused silver of Europe, Mexico and South America, which is brought here and sold to the Treasury, thus transferring the loss of foreign governments to our Treasury. Sixth—As the European governments adopt, like Germany, monometallic and gold standards, silver must fall; and in the face of this we are piling up a stock of coin not wanted at home and useless for foreign purposes, and which we know must decline in value. Seventh—By the continued coinage of silver beyond what the country requires we are subsidizing the silver-mining industry and creating a fictitious market for one commodity at the cost of the whole country, thus stimulating the increase and plethora of silver. That while the country is prosperous these results are not felt, but in a moment of panic the effect might be most serious.

This chamber therefore prays that this Congress will not separate without passing the bill introduced by Mr. Fisher, being a bill to limit the coinage of silver standard dollars to the requirements of the people.

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

The interval of Sunday after the bad break-up which the bull combination suffered at the close of last week was a godsend to the defeated party. It was a day of rest from active operations which enabled the members of it to collect their resources, re-form ranks and put themselves in shape for another effort. They seemed, also, to have been able to get assistance from some direction, by some supposed to be from a Vanderbilt quarter. Be this as it may, Monday morning came and the fight was reopened with a gallant charge of the re-formed bears which carried things before it with a sweep. Their brokers were in every crowd on the floor of the Exchange, and as the chairman's gavel fell a chorus of bids arose which took in all the stock offered and gave quite a bound to prices. The advantage gained was held through the day, and the same tactics were repeated on Tuesday. On this occasion, however, the other side seemed to have learned the trick, and such an unexpectedly large supply of stock was on the floor for sale that the buyers soon got more than they wanted, and despite the rapid advancement of Denver from 48¾ to 50¾, the market generally began to decline. The theory of some observers was that the bulls pushed up this stock in order to strengthen prices, while they in fact were selling out their other stocks as rapidly as possible. A story was afloat that the members of the combination had agreed on Sunday to a programme of proceedings something like this: They were to unite all their holdings of stocks in the hands of a trustee, who was to take charge of the market; each member pledged himself not to sell short any of the stocks belonging to any member of the pool, and the trustee was to work off the combined holdings as the market would allow; as a sort of stiffener of the market, Denver was to be held up, and whatever losses were made in doing that would be covered by the gains made on the other stocks. This story is given for what it is worth. The most that can be said for it is that it is not improbable. At any rate, Denver was made the most conspicuous on the list, and for three days led all the rest in the number of recorded transactions. It must not be concluded, however, that because several thousands of shares were recorded as having been bought and sold that this always represents bona fide sales or purchases. For example, it was only a week or so ago that a pool in one stock "washed"—that is, gave orders to buy and sell—16,000 shares of it; and the result of the day's operations, as found when the accounts were balanced after 3 o'clock, was the actual sale of one lot of 200 shares. The pool was just 200 shares short of what it started with. In another case, the "washing" of 13,000 shares of another stock brought the actual sale of only 100 shares. "Washing" like this is an expensive operation; for every 100 shares bought or sold costs $2. The holders of the stock must pay their commission fees anyway; and as "wash" sales are forbidden by the rules of the Exchange the brokers employed to buy and sell may not be informed of what their principals are doing—in such cases as those referred to they could not be. Therefore, though Denver appeared to be very heavily traded in, the pool in that stock might be actually doing nearly all there was in it; and certainly the rise in the price was due to their purchases. Having got it up above 50 (about the price from which it broke last week) the great bull card in the stock was played—namely, that a meeting had just been held at the office of the company, four of the old directors had resigned, four new men had taken their places, and hereafter the whole management of the company was to be changed for the better. Right on the heels of this announcement the price of the stock broke 4¾ per cent. This was one of those little surprises to which Wall street is occasionally treated. It meant simply, that on the strength of the new directory announcement stock was sold; possibly the pool withdrew its buying orders, leaving the selling orders in force, or else some large holder jumped at the opportunity to unload. Whatever the cause, the price tumbled quickly to 46⅜, and as the market had been already weakened by a decline in Lake Shore, this fall brought on a general decline. It cannot be said that since then the market has been anything but weak. Denver has recovered some of its loss; in fact, has been held up again when all other stocks were sagging; but it has been retired comparatively, and the Vanderbilt stocks have come forward as the most conspicuous by their activity.

It was said last week that the bear operators had declared that Lake Shore, Union Pacific, Denver, and one or two other stocks would have to go lower before the liquidation process then in progress was complete. All the Vanderbilt stocks have been steadily aimed at since, and Wall street is now largely speculating upon the state of Mr. Vanderbilt's health, as it is said it did for three years before his father, the old Commodore, died. A rumor that he was seriously ill sent a shudder through the market one day, and though this was soon denied, it must be said in all seriousness that the street generally feels somewhat uneasy on the subject. Mr. Vanderbilt is supposed at this time to have a large line of stocks—Lake Shore, Omaha, Northwest, Reading, and some others. If anything happened to him, serious enough to temporarily incapacitate him for business, there would be terrible fright in Wall street. As it is, these stocks have been declining in price for some time past, going up and down by fits and starts, according to the state of the market, but having a general movement downward. Some people think it indicates that Mr. Vanderbilt is reducing his holdings, but a generally uneasy feeling among other holders of these stocks would be sufficient cause for such declines as they show. Union Pacific has been considerably fought over, but the supporters of the stock, though for a brief while they again put it back a fraction over par, could not hold it there. The Boston people, where the stock is largely held, seem to be grumbling considerably about its decline, and are beginning to find fault with President Dillon, being half inclined to hold him responsible for it. A Boston dispatch stating that there was talk there of having the offices of the company removed from New York, "away from the demoralizing influences of Wall street," created considerable amusement here. If this meant anything it meant that the stock should be taken off the New York Stock Exchange—a change the bare announcement of which would cause a drop in price very much greater than any the stock has seen for a very long time. To narrow the market in which a stock of $60,000,000 can be dealt in is to absolutely diminish its market value. While the market is so entirely in the hands of professionals that general causes for a rise or fall in the prices of securities are of secondary consideration, they are discussed. The bulls insist that prices are so low as to justify a rise anyway; that our exports are increasing and our imports decreasing; that railroad earnings are large, loanable funds abundant, a large demand for our surplus products assured to us from Europe, and the iron industry recovering from the depression which marked it at the close of the year. The bears on the other hand insist that it is not recovering, as the prices for iron and steel indicate; that the coal companies have had to reduce production one-half; that our last year's crop was overestimated, especially in the important article of corn; that there are more railroads than there is business for them, while the near completion of lines now in progress will throw all existing arrangements out of joint by bringing in new competitors; that trade generally is bad, as shown by the large number of failures; that tariff legislation is unsettling values; and that the people have no surplus to invest in stocks, as last year's business was bad. So the argument goes.

That loanable funds are abundant is a fact. The banks have heavy reserves, and the rate for call loans during the week has scarcely averaged 4 per cent. The exchange market has been steady, showing no material change from last week's figures, which, however, are not low. Actual rates are $4.82¾ @$4.83 and $4.86@$4.86¼. The Bank of England increased its reserve during the week.

In the government bond market, this week, there was considerable activity, due to the report that another call for $15,000,000 of bonds was coming, which came at last on Thursday afternoon. There was considerable complaint about Treasury secrets leaking out. The following were the closing quotations yesterday:

	Jan. 26, bid.	Feb. 2, bid.	Feb. 2, asked.
U. S. 4s extended (3½ p. c.)	104	103¾	..
U. S. 6⅛s 1891, registered	112⅞	112½	112½
U. S. coupon	112⅞	113⅜	113⅝
U. S. 4s 1907, registered	119	119¼	119⅜
U. S. 4s 1907, coupon	118⅞	119⅛	119⅜

The bank statement of Saturday showed a further increase in the surplus reserve of the banks to the extent of $1,332,800, bringing it up to $10,007,575, which is about $1,000,000 larger than it was at the same time last year. The following are the comparative totals of the statements of January 20 and January 27:

	January 20.	January 27.	Differences.	
Loans	$317,459,800	$316,905,400	Dec.	$554,400
Specie	62,687,700	63,037,700	Inc.	1,280,000
Legal-tenders	23,064,400	23,351,400	Inc.	287,000
Deposits	308,309,300	309,126,100	Inc.	816,800
Circulation	17,470,200	16,985,800	Dec.	484,400

The proportion of total reserve to liabilities is now 28.21 per cent., against 27.88 per cent. at the same date of 1882.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

	Feb. 3, 1882.	Jan. 26, 1883.	Feb. 2, 1883.

COMMERCIAL.

The dispatches to BRADSTREET'S this week from the trade centers of the country reveal a continued quiet condition of business. Everywhere an expectant tone is manifest, based upon speculations as to the outcome of pending legislation at Washington. A distinct improvement in the dry goods trade of New York is noted. Wheat has advanced between 2c. and 3c. per bushel in American markets in the last week, mainly as the result of the increased prospect of short crops in Europe next summer. The movement of wheat at the west has diminished, producers and dealers believing in higher prices. Corn has declined at the west as the effect of the closing up of the January corner in Chicago; but prices in New York have been sustained, and in Liverpool the general advancing tendency of all breadstuffs has made an advance on corn. The iron trade continues quiet. Prices are practically unchanged except for steel rails. Several contracts have been taken during the week at less than $40. There is a better feeling in pig-iron circles in all localities, but no new business has come into the market. Bar, sheet, tank, plate and angles continue low and depressed, and there is little demand therefor. The Chicago iron and steel failure is said to have depressed business some. Coal is very dull, particularly bituminous. Anthracite coal is quiet. Full time at the mines this week was a concession to the line trade along the Reading road. But little provision had been made there for storage of coal, and furnace men were alarmed at the decrease in stocks. There was considerable opposition from some of the companies to working full time for this interest. Half time will now be observed until further notice. Ocean freights continue high and vessels scarce for chartering. A few petroleum vessels arrived, and were immediately taken up. Rates declined and advanced correspondingly. But little inquiry is made for grain vessels. Rates are high and vessels scarce in all lines at present. Berth freights and rates present no new features. The speculative petroleum market is quiet and firm. The Forest county region has ceased to be an important factor, as its character has been practically determined as "spotted," and all possible effect has been discounted. Shannon well No. 5 has declined from 2,000 to 800 barrels in three days, and will probably not last long. Other new wells in prospect do not promise to be serious in probable effect on prices. The wool trade is fairly active. Stocks are well in hand and values are stiffly maintained. There were 276 failures in the United States reported during the past week, 13 less than the preceding week, 82 more than the corresponding week of 1882, and 116 more than the same week of 1881.

BREADSTUFFS.

There has been an improvement in the foreign markets for breadstuffs during the past week, and the probabilities intimated in our article of a week ago, that the decline then noted would soon be recovered, has become a fact. Notwithstanding that the stocks of wheat in store in the United Kingdom are larger than at this time a year ago, the markets there show a constant upward tendency when not depressed by a decline in the American markets, as was the case a little over a week ago. The strength of the foreign markets, as we have several times stated, is due to the prospect of short crops throughout Europe next summer, and in this respect the situation does not improve. In France the weather has been so unfavorable that all out-of-door work is greatly in arrears, and it is now apprehended that the long submersion of the fields will have disastrous consequences with respect to the autumn-sown wheat. In Germany the weather has been very mild and unseasonable, and the complaints of damages to fields of planted grain by the inundations are very numerous. In England, *Dornbusch*, of the 12th, reports that the greater part of the fields "are still in a very sodden condition." "As far as can now be ascertained," says the London *Corn Circular* of January 12th, "there is a deficiency of probably one-fourth in the wheat acreage sown in the United Kingdom and France." It will be seen from these facts that with a deficiency of one-fourth in the area planted this year as compared with last, and with this diminished area damaged by floods and bad weather, the probabilities are in favor of certainly not over two-thirds of a crop in Europe next summer. The probabilities of making up some of this deficiency by spring sowing of wheat seem to have been pretty well canvassed in all the countries named, and the prevailing opinion seems to be that there will be scarcely any increase of the wheat acreage by that means. The area that was intended for wheat but remains unplanted yet will probably be planted in something else than wheat next spring, as the spring-planted wheat is too uncertain a crop in Europe.

A recent parliamentary report shows that the deficiency in the value of the crops in Ireland, owing to the unfavorable harvest of 1882, amounted in the aggregate to £5,818,167, as compared with the crops of 1881, and £2,527,664 as compared with the average of the preceding ten years. The value of the potato crop in Ireland last year was £4,317,687 less than in 1881. It will be seen by this loss of over $21,000,000 in the potato crop in Ireland alone that the failure of that crop throughout the great area of Great Britain, France and Germany was a more important failure to Europe than has occurred in crops for a good many years.

The recent and current imports of wheat into all the principal European countries is in excess of either last year or more recent similar periods, viz: The imports into France in the week to January 14 were equal to 1,352,000 bushels, against 1,036,000 bushels the previous week. The imports into Antwerp, in the week to Jannary 13, were 152,951 hectolitres. The total imports into Holland, in 1882, were 14,486,375 bushels, against 9,842,180 bushels in 1881.

There had been an increasd movement of wheat in India for some weeks up to December 18, and it was reported there were still large reserves in the interior. The receipts at Bombay for the year, from January 1 to December 26, were 15,223,303 bushels, against 20,585,887 bushels for the corresponding time in 1881.

The port of Odessa and also many of the Baltic ports are still closed by ice. At Odessa the receipts of wheat by rail in the first week of January were very large. In South Australia and Victoria the prospects for the wheat crop was fair at the end of November. In New Zealand, at the beginning of December, the harvest prospects were very favorable.

AMERICAN WHEAT MARKETS.

The wheat markets of this country have again been excited and fluctuated rather widely during the week, the net result being a general advance over the prices of a week ago. Comparing the prices of Thursday with those of one week previous, the advance in the New York market had been 2c. per bushel on all options for wheat. In Chicago, though the markets have fluctuated over a wider range, having been disturbed more by the manipulations of speculators, the advance was not so large as in New York, having been only about 1½c. per bushel on all options. There has been an important decrease in the movement of wheat from farmers' hands at the west. The total receipts at Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria in the week to January 26, being only 573,409 bushels against 699,092 in the week to January 19, 711,667 in the week to January 12, and 925,678 in the week to January 5. The average weekly receipts at the same points during December were considerably over 1,000,000 bushels. At Minneapolis the receipts of wheat have fallen off in greater proportion than this, and several mills have shut down, while all that are in operation are running light. This decrease of milling, however, is not so much on account of the smaller arrivals of wheat as it is in view of the fact that wheat has advanced faster than flour, and the millers have adopted the policy of restricting the production of flour and holding their wheat until prices of flour shall correspond to the advance in wheat. The shipments of wheat eastward from the six principal points above mentioned have also decreased, being only 270,597 bushels in the week to January 26, against 401,163 in the week to January 5, and against a much larger weekly eastward shipment in December. These facts all indicate the probability of diminishing stocks of both wheat and flour at all the eastern and seaboard markets during the next month, a feature which will have an effect upon the foreign markets in the direction of higher prices.

On Friday there was a further advance of nearly 1c. per bushel on all options for wheat in both New York and Chicago, the advance being induced by a further advance in Liverpool.

The weekly statement of the visible supply of wheat in the United States on January 27, as compared with January 20, shows an increase of 138,806 bushels.

CORN.

The movements and prices of corn at the west have been directly the reverse of those in wheat. The January corner in corn in the Chicago market started a large amount from the country to that point. The corner was not successfully carried out, and the price began to decline at the end of last week, and for cash corn dropped 12c. to 13c. per bushel in the last three days of January. There was also a large decline in the other options for corn in the Chicago market. In the week to February 1, February corn declined 5c. and May corn 2¾c. In the week to January 26, the total receipts of corn at the six western points above mentioned were 1,154,750 bushels, against 1,278,280 bushels the previous week, but since January 26 the arrivals have been larger. The New York market for corn did not advance in sympathy with the advance caused by the January corner in Chicago, and therefore did not decline with that market during the last week. The eastern and seaboard markets are all yet very lightly stocked with corn, and this, together with the advancing tendency of the foreign markets for that grain, makes the prospect for not only a continued active demand for consumption in the eastern states but also for export. On the other hand, there is the prospect that the demand for corn for distilling purposes will be very light. There is an excessive supply of whisky and highwines now on hand, as is shown by the large amount now in bonded United States warehouses awaiting a demand for export before the tax can be paid, and by the endeavor now being made to have Congress extend the time that it may be so held without payment of the internal revenue tax. Aside from these, however, all other usual consumptive demands for corn are large, and the prospect is that, though prices may recede some from the present figures, they will continue high compared with the average of former years.

On Friday the foreign markets for corn were higher, which caused an advance of ¼ @ ¾c. in the American markets for all options for corn.

The weekly statement of the visible supply of corn in the United States on January 27, as compared with January 20, shows a decreasc of 25,300 bushels.

PROVISIONS.

The markets for provisions present no special features and no movements of prices. The receipts of hogs at the principal western packing points are increasing, and the average weekly arrivals at Chicago are now in excess of the same at this time last year. This has had an effect to slightly depress the near-by options for both pork and lard; but it is believed that the receipts will not keep up to their present volume. The Liverpool market is also higher, pork having advanced 6d. per barrel and lard 1s. per 100 on Thursday. The export demand is increasing, and, all things considered, the prospect for the future is for higher prices. This is shown also by the fact that, while both pork and lard have declined for February and March delivery, they have advanced for May delivery.

THE PROVISION MARKETS BY TELEGRAPH.

From Buffalo, N. Y.: Provisions are quiet but firm. Hogs are high and margins small.

From Cincinnati, Ohio: Provisions stronger under liberal receipts.

From Chicago, Ill.: Pork is active and in higher demand for speculative; stocks 240,000 mess; 21,750 other grades, against 320,000 mess and 8,600 other grades for February 15, 1882. Lard in active demand for covering shorts; stocks 55,500 tierces contract; 7,650 other grades, against 145,500 contract and 15,820 other grades for February 15, 1882. Short-rib sides firm and higher demand for speculative; shippers out of the market; stocks 36,950,000 pounds, against 44,500,000 for February of last year. Hogs active; small receipts, attributed to storms and delayed trains.

From Louisville, Ky.: Provisions are advancing.

From St. Louis, Mo.: Cattle are active at steady prices; quality poor. Hogs in brisk demand at advances, but the supply is small.

From Wilmington, N. C.: Provisions firm and advancing.

From Memphis, Tenn.: Hog products are firm, with a good demand.

From Nashville, Tenn.: Provisions are firm. Cattle receipts moderate and demand good, prices being higher.

THE NEW YORK DRY GOODS MARKET.

This week has shown a decided improvement in the New York dry goods market, especially toward the close. Business is by no means brisk, but buyers are giving more attention to their requirements, and a steady movement prevails. The large interior distributors are seemingly purchasing with more caution this season, and the conservatism thus shown tends to establish confidence. The commission houses feel that what goods they are selling will be paid for. With the continuance of good weather, it is expected that brisk trade will be developed next week. Jobbing houses report a very fair volume of business for the season, though it is full early enough for their trade to open up.

The importations and marketings for the week are as follows:

	No. of packages.	*Value.*
Total imports of dry goods during past week	8,317	$2,399,269
Total amount of dry goods, duty paid, for past week	8,392	2,558,910

THE DRY GOODS MARKETS BY TELEGRAPH.

From Boston, Mass.: There is a decided improvement in dry goods. Jobbers report that orders from their salesmen in the west are increasing, with favorable indications for a continued good trade. In woolen goods the trade is generally fair. Flannels are quiet, except in some special lines. Collections are good.

From Providence, R. I.: The print-cloth market is quiet and very strong, the amount of sales being light. For 64s, $3^{11}/_{16}$c. are offered and declined; 56x60s are quoted at $3^{3}/_{16}$c. There are about 150,000 pieces on hand. The cotton market is quiet, and sales are moderate. Middling uplands are worth 10¾c. and middling gulfs 11c. There are about 4,000 bales on hand.

From Buffalo, N. Y.: There has been nothing of special interest to note in the dry goods trade. Travelers have not yet started out. Business is quiet, and sales restricted principally to house purchases for reassortment.

From Philadelphia, Pa.: Trade hardly realizes expectations, but demand at first hands is improving. Buyers are critical and cautious, selections being mostly in small lots. The market is firm for leading makes of both cotton and woolen goods. Clothiers are placing more orders for overcoatings, and agents' sample lines of fall goods for men's wear are gradually increasing. The outlook is favorable.

From Pittsburgh, Pa.: The movement of dry goods continues moderate, though for the season an average business is being transacted, it being too early for spring trade; buyers are only supplying immediate wants. Collections reported fair to good.

From Cincinnati, Ohio: Dry goods and clothing in fair demand. Collections are fair.

From Cleveland, Ohio: The dry goods trade has been reasonably good during the week and a good spring trade is anticipated.

From Columbus, Ohio: There has been but little change to note in the dry goods trade from report of last week.

From Indianapolis, Ind.: The dry goods trade shows a little more animation.

From Chicago, Ill.: The dry goods trade has been slow, owing to storms. Sales have been mainly on orders taken by traveling salesmen, who are canvassing more closely than ever before.

From Peoria, Ill.: Dry goods sales for the past month have exceeded the same month of 1882.

From Detroit, Mich.: In dry goods there have been no new features to report. Purchases generally only made for assortment, with probably a better business doing than same time a year ago.

From Louisville, Ky.: Dry goods jobbers report an average January business. Prices are low and about stationary. At present the outlook is for only a fair season.

From St. Louis, Mo.: Dry goods prices are stiffening, though advances have not been listed. Business continues in excellent volume with most jobbers.

From Burlington, Iowa: Dry goods trade unchanged. Jobbers getting in their spring stock anticipating a good business.

From San Francisco, Cal.: There has been a more active demand for dry goods, and lower prices need not be apprehended.

From Baltimore, Md.: The dry goods market, the past week, has had no special feature, and sales were light. Orders from the south are coming in very slowly, and collections are not as satisfactory as at this time last year.

From Norfolk, Va.: The dry goods jobbers are only doing a moderate business.

From Richmond, Va.: There has been a very slight improvement in the prospects for a favorable spring dry goods trade.

From Wilmington, N. C.: The dry goods jobbing trade is improving; retail trade fair.

From Savannah, Ga.: The dry goods trade is slightly improved. Merchants are busy receiving goods and making up samples to entice spring orders. The cotton market is more steady, with a slight advance.

From Galveston, Tex.: The dry goods trade since last report has been rather dull.

From Memphis, Tenn.: In dry goods the jobbers report very little if any improvement in the volume of this week's business. Collections said to be better.

From Nashville, Tenn.: There is nothing of special interest to report in dry goods trade. Jobbers are making active preparations for and expect a good spring trade.

COTTON.

The total receipts of cotton at the ports since September 1 are 4,321,639 bales, against 3,731,268 bales for the same time last year, showing an increase over last year of 590,371 bales. The total receipts for the week at each port, compared with those of last week and the corresponding week last year, are given below:

	This week.	*Last week.*	*Last year.*
Galveston	21,992	12,434	11,270
New Orleans	63,650	54,398	25,599
Mobile	12,063	8,978	4,072
Savannah	10,521	12,844	10,562
Charleston	12,768	8,110	7,954
Wilmington	3,505	2,285	3,092
Norfolk	17,949	14,335	15,015
Baltimore	770	1,295	231
New York	5,473	6,154	9,342
Boston	4,273	3,966	2,304
Philadelphia	952	3,013	1,183
Other ports	5,032	3,346	4,584

The receipts at the twenty-four interior towns usually reported were 59,989 bales, against 44,135 bales last week and 22,515 bales for the corresponding week last year. The shipments for the week were 67,898 bales, against 57,291 bales last week and 34,081 bales for the corresponding week last year. The stocks for the week were 319,984 bales, against 323,149 last week and 358,548 for the same week last year. The New York cotton market has remained unchanged for spot middling uplands. The sales for the week have been for consumption 294 bales, and for speculation 100 bales, making a total of 394 bales. Below will be found the closing quotations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
Ordinary	7½c.	7½c.	9 5-16c.
Strict ordinary	7 15-16	7 15-16	9⅞
Good ordinary	8¾	8¾	10 11-16
Low middling	9 11-16	9 11-16	11 9-16
Middling	10 3-10	10 3-16	12
Good middling	10½	10½	12⅜
Middling fair	11½	11½	12⅛
Fair	12	12	13⅜

The New York market for spot cotton closed quiet at unchanged quotations.

The New York future market has been lower, the price having declined an average of 6 points for near months and 7 points for later months. The sales for the week foot up 448,400 bales, against 735,400 bales for the corresponding week last year. The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
February	10.15c.	10.18c.	12.01c.
March	10.24	10.31	12.23
April	10.38	10.45	12.45
May	10.52	10.59	12.65
June	10.66	10.73	12.83
July	10.79	10.86	12.96
August	10.90	10.97	13.07
September	10.62	...	12.40

The New York future market closed firm.

The Liverpool market for spot cotton has advanced to $5^{11}/_{16}$d. for middling uplands, and for middling Orleans to 5⅞d.

The sales for the week at Liverpool were 71,000 bales (of which 43,000 were American). Stock in port 851,000 bales (of which 595,000 were American), and the amount afloat 346,000 bales (of which 289,000 were American).

The Manchester market is reported quiet.

COTTON REPORTS BY TELEGRAPH.

From Wilmington, N. C.: Weather clear and pleasant. Cotton receipts good. Market active.

From Newberry, S. C.: The weather since last report has been extremely bad, but now fair. Picking is progressing finely, will be finished by middle of February. About eleven-sixteenths of the crop has been marketed in this county.

From Columbus, Miss.: The weather during past week has been pleasant. Cotton receipts fair. Receipts to date are 25 per cent. in excess of same time last year.

From Helena, Ark.: Grades of cotton coming in very low. Light receipts. Four days' favorable weather.

WOOL.

The improvement in the general condition of this market noted in last report has been sustained, but there has been no radical change during the past week. Manufacturers are freely meeting current requirements at present prices, and stocks are being rapidly reduced in all markets. The limited supply of some descriptions—notably long-staple wools—prevents large sales and inclines holders to look for a gradual hardening of prices toward spring, but as yet there has been little actual advance except in isolated cases. Supplies remaining unsold in the interior are believed to be small, and as a rule are offered indifferently. There is a steady inquiry at all points for good lots of combing fleeces and a fair demand at Boston and Philadelphia for fine washed clothing and all desirable grades of unwashed wools. Pulled wools that have been rather slow in the latter market for some time past have been selling freely during the past week at comparatively low prices. Receipts of all kinds continue small. The general outlook is encouraging to the selling interest. Foreign markets are cabled dull for almost all descriptions.

IRON.

In the American pig iron trade during the past week there has been no special improvement, but it is gratifying to announce that "a better feeling exists." The sales that have been made have been small and of that variety known as "for immediate requirements" only. Prices remain as last quoted on the basis of $25 @ $26 for No. 1 foundry at New York. The Scotch pig iron market is reported to be at about its lowest ebb. Prices have gone off about 6d. during the past ten days, and business is very quiet. Sales are about 800 tons for the week, mostly of spot lots and of various brands. The arrivals were about 1,700 tons, some of which went into store. The market for American manufactured iron continues dull, with but little inquiry. Philadelphia advices corroborate this, and give current quotations at 2.1@2.2c. for ordinary bar, 2.3@2.4c. for best refined bar, and 2.5c. for tank, ship, plate and angle iron. Bessemer pig iron is quoted at $22@$22.50, but it is believed that any considerable cash order (at Philadelphia) could be placed at $21.50. Steel rails are reported weaker. The orders during the week have mostly been for small lots. One or two contracts for noteworthy quantities were placed, however, and it is rumored that concessions were made, in one instance the net price being $39. The news of the failure of the Union Iron & Steel Company, from Chicago, has weakened some departments of the iron and steel market a little. The British Board of Trade report of exports of English and Scotch iron and steel to the United States during 1882, as compared with 1881, is summarized and discussed in the editorial columns of this issue. It is noteworthy that our imports of iron and steel from Great Britain in 1882, exclusive of tin plates, are nearly 6,000 tons less than in 1881.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, February 2.—The iron trade is decidedly depressed. Pig iron is mostly cheaper. Orders for manufactured very slack. Coal and coke cheaper.

DOMESTIC IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: The market is quiet. Buyers are moving cautiously, owing to the tariff uncertainties, but everything points to an active trade as soon as future conditions can be more clearly determined. Inferior brands of crude are weak. Bessemer is dull. Rails are quiet and steady. Old material is bought in small lots at concessions. Finished and construction iron is generally neglected, except for actual requirements.

From Pittsburgh, Pa.: Tariff legislation continues to retard trade in the iron markets. A settlement of the tariff question or an adjournment of Congress will, it is believed, have an immediate beneficial effect.

From Cleveland, Ohio: There is no change in the conditions governing the iron markets. Transactions continue light, with prices generally the same as during the past month.

From Cincinnati, Ohio: Iron and its products are quiet.

From Chicago, Ill.: Hardware has experienced a light demand on orders. Nails in fair supply, with small sales. Bar iron dull; pig selling more freely in car lots. Steel rails dull. Iron ore contracts at $4.50@$4.75 at mines.

From Detroit, Mich.: In iron mills kept running, but not full; doing more in plate than bar, but not at profitable prices.

From St. Louis, Mo.: Business in hardware only fair. Iron values continue unchanged, but are very firm. The demand for manufactured iron is steadily increasing.

From Baltimore, Md.: In the iron market large buyers appear to be holding back on account of the tariff question. Holders remain steady with fair demand for current want of foundries.

COAL.

The reduction in stocks of coal accomplished by the restricted output down to January 27, caused an uneasiness. At the furnaces along the line of the Reading Railroad coal is not stored to any great extent, so it was agreed to work full time at the mines during this week. This has been done. The surplusage of stocks had been materially reduced, but that stiffening in prices which was looked for did not show itself, and the output of anthracite will be again stopped during three days of each week "until further notice." Business is quite dull in the anthracite trade; this, however, is not unusual at this time of the year. In the bituminous trade business is very slack indeed. In eastern markets there is little doing. At the west there is more business reported, but no special activity exists in any quarter.

PETROLEUM.

The speculative market for certificates of crude petroleum has been well sustained during the week, and the average of closing prices for the six days closing last evening is higher than was expected by many during the closing days of last week. On Saturday last there was a decline of 2⅝c., but trading was active. The only news of note consisted in reports that the Patterson well had been abandoned, which was expected, and that the Shannon No. 5, referred to last week (known as the Union Oil Company's well), had filled with water. Shannon well No. 3 was also reported, the statement being that it was about to come in heavily. The market opened at $1.02⅞, touched 99⅛c., and closed at $1.00¾ @ $1.00⅞. Prices were weaker on Monday, due in large part to a general desire to realize on pretty free purchases made during the preceding week and earlier at rates under the market on the 29th ult. This caused a decline of 3¼c. from the prices at the close on Saturday. The opening sales were made at $1, and the highest was $1.00¾. At the close the figures were 97½@97⅝c. On Tuesday there was no news of importance, and during the morning session trading was dull. Considerable buying took place later in the day, however, under which influence prices took an upward turn. The opening sales were at 98c., the lowest price was 97½c., the highest $1.01⅞ and the closing quotation $1 bid, a gain of 2½c. on the figure of the evening before. On Wednesday the month's report of operations in the producing regions was published. It was of a decided bullish complexion, and contributed to the strength of the market, which advanced another 2½c. over Tuesday evening's figures. The market was active, and fluctuations were numerous though not violent. The opening sale was made at 98½c., the highest price paid was $1.03⅞, the lowest 92½c., and at the close $1.02½ was bid and $1.02⅝ asked. The drop to 92½c. was influenced by the news that the new well just south of the Reno, referred to last Saturday, had come in and was doing 2,000 barrels per day. The break did not last long, however, as the well was too near the Reno to indicate any staying qualities, and prices advanced. The gist of the January report, as compared with that of the month preceding, is as follows:

	Close Jan.	*Close Dec.*
No. wells drilling	125	139
No. wells completed	125	123
No. rigs up and building	130	123
New production (barrels)	2,750	2,550
Average new production per well (bbls)	22	20¾

Prices in	*Highest.*	*Lowest.*	*Average.*
January, 1883	$1.05¾	.83¾	.92 3-5
January, 1882	.87⅛	.79¼	.83 1-10

In the above, received Wednesday, the new well south of the Reno is reckoned at 1,000 barrels daily, a drop of 50 per cent. from the rate of flow credited it the day preceding. Wednesday's trading aggregated about 9,000,000 barrels at the various exchanges, and the advance for the day was 1½c. The interest in Forest county has practically ceased. The operations there have shown pretty conclusively that the oil there is in little pools, and the market can, therefore, hardly be seriously affected by it in the future. Nothing of special moment occurred on Thursday. There was considerable trading, and values were well maintained. The opening price was $1.03¼; the highest figure touched was $1.03½, the lowest $1.01, and the close was at $1.02 bid.

There was no news of importance from the producing regions received at the exchanges yesterday. The market was quiet. Prices opened at a fraction over $1.01 in the morning, and at $1.00⅝ in the afternoon. At the close the quotation was $1.02¼ bid, against $1.03⅜@$1.03½ on Friday of last week, a decrease of 1⅜c. on the week.

The market for refined oil was weak on Monday last, in sympathy with the lowered prices of crude, and the concession was ⅛c. on various brands. The demand was light for both refined and crude in barrels, but prices were held without further concessions. The feeling on Tuesday respecting refined was improved, and a stronger tone was again recorded on Wednesday.

The closing prices of certificates of crude petroleum and of petroleum products last evening, as compared with those of Friday, January 26, were as follows:

	January 26.	*February 2.*
Certificates of crude	$1.03⅜@$1.03½	1.02¼ bid
Refined petroleum, 110°	7⅞	7¾
Refined petroleum, 70°	8	7⅞
Crude, in barrels,	6⅞@ 7⅜	7@ 7½
Case oil, plain brands	10½	10½
Naphtha	6¾	6¾

The exports of petroleum from the United States during January (to the 27th) show an increase of 3,327,397 gallons (crude equivalent) over those of January, 1882. For the week ending January 27 the shipments amounted to 10,499,054 gallons, larger than in any one week thus far in the new year. Since January 1 they have (to the 27th) aggregated 35,903,752 gallons, against 32,576,355 gallons (crude equivalent) in a corresponding portion of 1882. The bulk of this export business has been done at the port of New York, where the shipments of petroleum since January 1 exceed those of a like period of 1882 by 6,737,195 gallons, the totals being 31,696,584 gallons, against 24,959,389 gallons. Other ports therefore have lost about 3,000,000 gallons of exports of petroleum as compared with last year. New York sent abroad 8,421,541 gallons of petroleum and petroleum products in the week ended January 27.

OCEAN FREIGHTS.

The ocean freights market during the past week has been almost a repetition of that for the preceding seven days. The demand for petroleum vessels has been the only noteworthy request for tonnage. During the latter portion of the week a number of this class of vessels arrived. The preceding stiffness of rates for petroleum tonnage thereupon gave way, and charters were taken for British and continental ports at rates under the asking for several days past. These vessels out of the way, rates again became high and are firmly held. There has been scarcely any demand for grain charters, and brokers are without any special supply of the same. The market in general has been quiet, at times dull, and rates on the average high and firmly held.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: Business very quiet. Market values steady, but the outlook is encouraging.

From Boston, Mass.: The boot and shoe trade is very quiet. There are about thirty buyers in the market. The dullness is easily accounted for by the fact that orders were placed much earlier than usual, and is proved by the heavy increase in shipments for some time past. Shipments for the week to places outside of New England 53,727 cases, against 52,219 cases the fifth week in 1882. Total shipments since January 1, 222,418 cases, against 194,283 cases same time last year.

MIDDLE STATES.

From Buffalo, N. Y.: Trade in general lines is quiet, and shows a falling off to date as compared with last year. House sales for immediate delivery are small, and mail orders are restricted to hand-to-mouth transactions, a few exceptions being noted in clothing and boots and shoes for future delivery. Groceries rule steady. Lumber is inactive, and prices frequently shaded to influence buyers; stocks are comparatively heavy. Leather quiet but firm. Collections generally are only fair. The outlook is not regarded unfavorably, although business so far this year has shown no animation.

From Philadelphia, Pa.: There has been only a moderate degree of activity in wholesale trade circles during the past week. Business is considered backward in most departments. This condition of affairs is in part due to the rigorous weather that has prevailed for several weeks past, but is chiefly attributed to the unsettled tax and tariff questions before Congress. Some lines of manufactured goods are moving fairly, but general rade is reported less liberal in volume than at this time last year. Cotton is dull, but holds very steady in price. Local mills are still idle or running on part time in many cases. Wool is in very fair demand and firm. Groceries are jobbing quietly at steady prices. Farm products are generally more active, but dairy produce is dull, and butter has again declined. Provisions are higher and in good demand for consumption. There is a better export demand for corn, but foreign orders for wheat are exceptional and mostly below market rates. Tonnage is still scarce. There is only a moderate speculative trade in grain. The undertone of the market is strong, and wheat is about 1½c. higher, but corn shows little change from this time last week. Flour is in fair demand in part for export; stocks are under strong control. Petroleum is dull.

WESTERN STATES.

From Cincinnati, Ohio: There has been a stronger consumptive demand and more liberal movement in nearly all lines of trade during the past week. There is an exception in whisky. The delayed action of Congress, and the knowledge that there is some February bonded whisky to release, has made slight undercurrent of anxiety, and distillers, as a rule, are waiting quietly, without attempting to push trade. The same can be said of corn, cotton and flour.

From Cleveland, Ohio: In general trade business has been moderate only, the exception being in groceries, in which a fair week's trade has been done for the season. Pending the settlement of the tariff question, an unsettled feeling exists among manufacturers and jobbers in some lines, yet merchants generally are preparing for a fair trade during February and throughout the spring.

From Columbus, Ohio: There has been but little change to note in the condition of general trade from report of last week. Dealers and manufacturers are not complaining, and quote business fully as good and in some lines better than for corresponding season of other years. No change.

From Indianapolis, Ind.: Trade still appears to maintain its quiet aspect, and lacks ambition. Country merchants are very conservative in their purchases, and cannot be induced to buy beyond their present necessities, and are somewhat slow.

From Chicago, Ill.: Boots and shoes slow. Rubber overgoods active. Lumber dull. Sugars and coffees in fair request and scarce. Wheat firm; influenced by strong eastern and foreign advices; demand purely to cover shorts and fill outside orders; no shipping demand; small receipts attributed to storms and severe weather. Corn feverish, and higher; receipts smaller; demand mainly to cover shorts.

From Peoria, Ill.: Trade in staples is good, though collections are slow.

From Louisville, Ky.: There is an evident full and apathy in general business. Most retailers are carrying over large stocks, and must be cautious in spring purchases. The whisky and manufactured tobacco trades are almost at a standstill, and likely to remain so until Congress acts, or decides not to act, on the proposed measure affecting these interests. Plow manufacturers are working to their full capacity on orders. Flour is gradually advancing. Produce is active. The grain trade continues light and unsatisfactory. The growing wheat looks poorly, and farmers are holding what remains of the last crop above current quotations; deliveries are, therefore, barely equal to the wants of city millers. No corn is being shipped east from Kentucky. Cotton is quiet and inquiry fair, but sellers are holding for full rates. The leaf tobacco movement is unusually large, the market being decidedly brisk and strong; January receipts 5,900 hogsheads; sales 7,300 hogsheads, of which 6,000 hogsheads were white burleys; burley tobacco has ranged as high as $24 per cwt. this week. The January clearings exceeded $36,000,000, being greater than any previous month except July, 1881. Money in fair supply and readily taken.

From Detroit, Mich.: Other lines doing fair trade for the season. Some little improvement noted in collections. Banks report fair demand for money, but not up to supply. The opening of a clearing-house here this week fills a long-felt want in banking circles.

From St. Louis, Mo.: Flour is dull at old prices, and has no export movement. All grains are advancing again on cash deals, and trading is active, but futures are irregular and unsettled. Cotton has been remarkably steady through the week; nearly all received now is stained, frost having bitten the immature bolls; white cotton is growing scarce here, and is advancing. Horses and mules in excellent request, at good values, with large offerings. Business in groceries only fair. Other jobbing lines generally have better trade than at same time last year.

From Burlington, Iowa: There is a very fair winter trade being done in most lines. Country roads good, and farmers' produce coming in freely.

CALIFORNIA.

From San Francisco, Cal.: There has been no movement in general business worthy of notice. Wheat strong at $1.83¾ for No. 1. There is a cold, dry wind prevailing. Rain is wanted.

SOUTHERN STATES.

From Baltimore, Md.: The volume of business was light the past week, and complaints of dullness were heard in almost every branch of trade. Salesmen throughout the south have met with but little success so far, and are very much discouraged. Collections also continue to come in slowly. It is not thought that this state of affairs will affect general trade very materially, as many houses who had ordered large spring stocks anticipated a falling off in sales and reduced their orders accordingly. The increase in the receipts of wheat the past month over January, 1882, amounted to 783,318 bushels, and of corn 1,259,033 bushels, which is accounted for by more favorable crops. The transactions in grain during the week were fair. Receipts of southern were light and quotations merely nominal. The market for western was firm. Under liberal offerings of southern corn and a moderate demand that market was rather weak and inanimate, prices falling off late in the week 2@2½c. per bushel. In western the shorts were squeezed a little but not hurt, as prices were only run up a few cents on spot and January deliveries. The demand for cotton has been light, and the market was dull but steady; late sales were at 9⅞c. There has been a good inquiry for grain charters in the freight market, and the market is quite firm. Money has been in good supply, but the demand has been light, particularly against good collaterals.

From Norfolk, Va.: Trade generally not active. The good weather we are now having will affect favorably all branches of trade. Collections come in slowly.

From Richmond, Va.: The weather has been more favorable, and some improvement is noticed in general business over last week. Groceries seem quite active.

From Wilmington, N. C.: Grain and breadstuffs firm and advancing. Spirits of turpentine and rosins steady; tar and crude turpentine firmer. Timber wanted; lumber and shingles quiet and steady. Freights, foreign steady; coastwise nominal.

From Savannah, Ga.: Trade has moved even and steady. Weather fair but heavy; rain has prevailed again since last reports. The roads are in a bad condition. Business in the interior has not improved. A number of merchants have overstocked themselves through the urgency of drummers; in many cases stretching their credit so far as to be unable to meet the pressure brought to bear upon them by unpropitious times and backward trade.

From Columbus, Miss.: General trade very good for this season of year.

From Galveston, Tex.: General trade since last report has been rather dull.

From Memphis, Tenn.: General trade has about kept up to last week's average. Demand for corn dull, but prices hold firm. Cornmeal lower. Flour holds steady, with fair demand.

From Nashville, Tenn.: Trade for the week has been quiet. Wheat is in active demand, at good prices, the receipts being unequal to the demand. Flour steady; demand moderate. Corn quiet and lower. Country produce active; prices good.

LATE MAILS.

Our Chicago correspondent writes as follows under date of January 31: Although business among the jobbing houses is slowly improving, the anticipations of an active trade that were indulged at the opening of the month have not been realized: The failure, however, is almost wholly attributable to the bad character of the weather in the northwest, which caused almost a total suspension of the retail trade throughout a large section of country. During the past few days your correspondent has visited a large number of points in Wisconsin and Minnesota, and everywhere found the same stagnation. Merchants from Dakota also assured me that never before had they known business so dull in January. Advices from the southwest report trade as slightly improving, and say that a week of fine weather would impart a good degree of activity in sales. Stocks of goods in all localities are small compared with this time last season, and traveling salesmen write that the outlook for an active trade in the near future is most favorable. These reports come from the representatives of nearly all branches of trade, and especially from those handling dry goods, boots, shoes and general hardware. Orders for staple groceries are fair and stocks very moderate. Country collections are improving, and trade as a rule is regarded as in a healthy condition. The wheat market is strong, but the strength is generally regarded as being due to local manipulators, who are supposed to be forcing up prices for the purpose of selling large blocks for future delivery, and when they have got out a good line of shorts it is thought they will let prices go back. These conclusions are strengthened by the fact that there is no shipping demand, and stocks are steadily on the increase, the bulk of the 6,000,000 bushels here being contract grades. Corn is rapidly accumulating, and the market is very nervous. It is thought, however, that the arrivals will fall off materially, as, the January corner being closed, the heavy drop in prices will have a tendency to check shipments from the interior, and especially from the southern states, from which we have recently drawn large supplies. The falling off in the receipts of hogs has imparted a strong tone to provisions, and prices for mess pork, lard and meats are higher, but the demand is chiefly to cover short sales. The receipts of hogs so far this week have been disappointingly small, but many well-informed dealers think the decrease is partly due to bad weather and delay of trains by yesterday's storm.

The following table exhibits the number of cars of wheat inspected in store for the month of January, as compared with the years named:

	1883.	1882.	1881.	1880.	1879.
No. 1	4	.....	.....	2	12
No. 2	870	157	1,286	2,158	2,896

Winnipeg, Man	@ 8	½ premium.

BRITISH WOOL.

The Bradford *Observer*, in its annual review of the British wool trade, says: "It is now thirty-two years since English wool ruled at as low a rate as it does to-day. During two-thirds of that period Bradford enjoyed a time of unexampled prosperity. She made the goods which the world wanted, and she made them almost exclusively. * * America, her best market, has been closed against her. Germany has shut her out, and France has done the like, and to crown the edifice of misfortune, fashion has turned against her, and, although she is struggling bravely to adapt herself to changed circumstances, she finds herself anticipated in her new trade by the nation to whom the makes now in vogue have long been familiar. This condition of things is nothing short of a national calamity, for the nation at large is much more interested in the welfare of Bradford than might at first sight be supposed. This will be at once perceived when we say that between the prosperity of Bradford and the adversity of Bradford there is a loss to this country, in round figures, of £5,000,000 a year. The average price of Lincoln wool during the whole of the thirty-two years of which we are speaking was 18¼d. per pound. The average price for the year just past was 11¼d. This means that the farmers in the county of Lincoln alone are, as compared with average times, losing money by their wool at the rate of £360,000 per annum. It means also a loss of productive power of 5s. an acre on the cultivated land of the country. What it means as regards the spending power of Lincolnshire and the whole country, as represented by this example, is a subject for very serious reflection. This is one aspect of the depression. But nearer home there is another and more pressing feature. A long period of prosperity had the usual effect of bringing about great inflation. Ten years ago there was an increase of machinery in the trade, which at the present rate of consumption could supply many times the quantity of goods which is likely to be required."

FOREIGN DRY GOODS IMPORTS AT NEW YORK.

The following is taken from the *Journal of Commerce:* From 1849 the growth of imports shows a steady increase until 1859, when they were nearly double those of the previous year. In 1861 the falling off was $60,000,000 below the preceding year, after which the increase was gradual until 1866, when the total was larger than ever before, the effect of which was a decline in 1867 of nearly 30 per cent. Then followed a yearly increase until 1872, when the total reached the enormous figures of nearly $137,000,000, and had it not been for the panic of 1873, that year would probably have shown a larger amount; but Europe becoming frightened, orders and shipments were suddenly annulled, and the decrease has been regular until 1879, when a decided change occurred, succeeded by a more marked increase in 1880, followed by a decrease last year, compared with which, however, this year shows a large increase. We annex a table showing at a glance the several changes to which we have referred:

IMPORTS OF FOREIGN DRY GOODS AT NEW YORK.

Year.	*Value.*	*Year.*	*Value.*
1849	$44,435,571	1866	126,222,855
1850	60,100,375	1867	86,205,043
1851	62,846,731	1868	80,995,834
1852	64,654,144	1869	94,725,417
1853	93,704,211	1870	109,498,523
1854	80,842,936	1871	132,480,777
1855	64,974,062	1872	136,831,612
1856	93,362,803	1873	113,160,465
1857	90,534,120	1874	106,520,453
1858	60,154,500	1875	90,816,025
1859	113,152,024	1876	80,716,163
1860	103,922,100	1877	77 756,778
1861	43,036,080	1878	74,803,197
1862	55,121,227	1879	91,549,600
1863	67,274,517	1880	119,844,120
1864	71,589,752	1881	111,537,620
1865	91,965,138	1882	132,202,730

TRADE EMBARRASSMENTS.

There were 276 failures in the United States reported to BRADSTREET'S during the past week, 14 less than the preceding week, 82 more than the corresponding week in 1882, and 116 more than the same week in 1881. The middle states had 44, a decrease of 24; New England states 46, an increase of 10; southern states 72, an increase of 1; western states 84, a decrease of 11; Pacific states and territories 30, an increase of 11; Canada 46, an increase of 20. The important failures were The Union Iron & Steel Company, of Chicago; The Mohr & Mohr Company, distillers, Cincinnati; Ware River Woolen Company, of Barre, Mass.; R. H. May, carriages, Augusta, Ga. The majority of other failures were for comparatively small amounts. In the principal trades they were as follows: General traders 61; grocers 41; shoes 18; clothing 18; liquors 16; manufacturers 14; hardware 14; hotels and restaurants 11; dry goods 10; jewelers 8; drugs 8; tobacco and cigars 7; commission 6; fancy goods 5; bakers and confectioners 5; butchers 4; books and stationery 4; produce and provisions 3.

ALABAMA.

CLAYTON.—W. H. King, drugs, has failed and sold out.

LIVINGSTON.—J. W. Arnold & Co., general store, have assigned to G. C. Gowdey. Liabilities about $3,000; assets about the same.

MOBILE.—Hall & Scott, cotton buyers, have failed. Liabilities $30,000; assets said to be nothing. They had a branch at Montgomery.

WACOOCHEE.—W. B. Gibson, general store, has failed and sold out.

ARKANSAS.

FORT SMITH.—A. J. Moore, grocer, has been attached by his sister for $4,500.

CHARLESTON.—John E. Brooks, grocer, has failed and gone out of business.

CHICAGO.—Henry Graham, tailor, has been closed by the sheriff.

CHICAGO.—Frank E. Hooper, cigars and tobacco, offers 25 cents.

CHICAGO.—A. B. Stone, president of the Union Iron & Steel Company, announced on the 1st inst. that the company might have to suspend and place the property in the hands of a receiver. The circumstances which brought it about, he said, were the large amount of material on hand, the decline in the price of rails, and the unreasonableness of the workmen, who demanded 30 to 40 per cent. more than is paid by eastern mills. The recording of a mortgage for $1,000,000 on the 31st ult. was the first information of the embarrassment, and an attachment for $27,850 was issued the next day. The works were closed on the evening of the 1st inst., but nothing has yet been done in relation to the appointment of a receiver. The company was formerly known as the Union Rolling Mill Company, but changed the name and reorganized in January, 1880, as the old company could not increase its capital. The capital was placed at $1,200,000, and subsequently increased to $1,600,000, paid in. It expended $800,000 in building new works and improving old ones, and, to avoid making an extra assessment, in July last it gave a mortgage of $500,000 to raise the money. The company has since not done as well as was anticipated; sales were low and it became overstocked, and the second mortgage for $1,000,000 was the result. The liabilities, including mortgages, are reported at $2,500,000, of which $1,500,000 is secured by mortgage. The assets are given at $4,000,000. Special advices from Chicago state that the embarrassment is temporary, and likely to result in the appointment of a receiver. The causes of failure are said to have been poor financial management, overpurchasing raw materials, and enlarging works when they should have been situated to take advantage of the great demand for rails at the time. The labor troubles, tariff agitation and placing of large mortgage two days ago, all contributed to the suspension and coking down of furnaces.

KANKAKEE.—Ignatz L. Pollock, clothing, has been closed by the sheriff on confessed judgments. Assets about $1,000.

MATTOON.—James O. Taylor, tinner, is reported to have been closed by the sheriff.

NORTH CAROLINA.

HENDERSON.—J. R. Young & Co., drugs, etc., have assigned.

KEYSER.—D. McDougald & Son, general store, have assigned.

KITTRELL.—Ellis & Brother, general store, have assigned.

PALMYRA.—K. Allsbrook & Co., general store, have assigned, and will probably pay 75 cents. The main house is at Scotland Neck.

RICHLAND.—J. O. Foy, general store, has assigned to J. M. F. Brock. Liabilities about $1,500.

SCOTLAND NECK.—K. Allsbrook, general store, has assigned.

WELDON.—A. M. Inge, general store, has assigned.

WILMINGTON.—George M. Crapon, grocer, has assigned. Liabilities about $5,000; nominal assets $5,500. He recently succeeded Crapon & Pickett, assuming the liabilities of the firm, which he found were larger than he supposed, and concluded to assign.

WINSTON.—Graham Brothers, general store, have assigned.

OHIO.

BELLEFONTAINE.—W. W. Williams, saloon, has assigned.

CINCINNATI.—The Mohr & Mohr Company, distillery and wholesale liquors, gave three chattel mortgages on the 27th ult. to C. H. Giesler $2,600; Henry Bonewitsch $4,556; William Solomon $26,179, and assigned to Charles F. Rankin. Paul F. Mohr individually gave a chattel mortgage for $5,500 to Andrew Dieterle. The proprietors attribute the failure to the effects of the delay in Congress in taking action on the bonded whisky question; heavy losses by two fires, amounting directly or indirectly to at least $75,000, and losses by numerous failures of their customers. They claim that they had $150,000 taxes on bonded whisky coming due February 5 and running through the spring months, and the banks refused them the necessary loans on account of the congressional matter. The liabilities are stated to be about $200,000; nominal assets $350,000.

CINCINNATI.—Varnholz & Goodman, clothing, have assigned to B. Burnet.

CLEVELAND.—John Reidel, jeweler, has assigned to E. Hessenmuller.

CLEVELAND.—The Cleveland Furnace Company has been granted a partial extension of six, nine and twelve months on liabilities of $75,000; nominal assets about the same.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 10, 1883.

NOTES OF THE WEEK.

The stock market during the past week has demonstrated that the late bull combination has broken up in defeat; that the movement started by it has been a dismal failure, and that if a turn of the market is made at this time or later it will be done by the operators who stood outside the January movement and were either actively or passively hostile to it. The public will not buy stocks at any price; at any rate, the market seems to show this. Therefore, when the leading bear operators attacked so prominent a stock as Union Pacific they broke it down seven points in a week, because the other operators who held large blocks of it could not hold out against the assault, and no one outside the Wall street stagers appeared willing to buy that or anything else. A rally of the market was effected on Thursday, but it was done by recognized stock market manipulations, and gave little hope for the future. People who look for a genuine bull movement seem to have nothing left to them now but to continue looking, Still, the darkest hour being before the dawn, it may be that a change for the better will come soon; and, indeed, rumors were in circulation yesterday indicating that the Union Pacific episode was another "deal" similar to that which attended the Western Union consolidation, and that it was now over, and the return movement in the stock and the market would follow.

Mayor Edson has sent to Albany the draft of a new charter for the City of New York. This he has done in response to a resolution of the Assembly asking what legislation is necessary in order "to economize, simplify and improve the local government of the City of New York." The bill of Mayor Edson provides for single heads for all departments of the city government except the Board of Education. The sole power of appointment and removal is vested in the mayor, and removals may be made by him whenever he deems that the best interests of the city require such action. New York city's charter question comes up annually now at Albany. The introduction of this or that bill is of little importance save as it affords opportunity to set forth afresh the principles which should obtain in any legislation affecting generally the government of New York city. As is widely known, the seat of government of the city is now at Albany, but the immediate power of taxation and appropriation is vested in a Board of Apportionment, so called, consisting of the mayor, the controller, the president of the Board of Aldermen, and the president of the Department of Taxes and Assessments. This board fixes the tax levy and apportions it among the different departments. To this board the city council or Board of Aldermen acts as a sort of advisory committee. It is directed by the law that the estimates shall be submitted to the Aldermen for criticism, but the Board of Apportionment has the power to ignore any and all objections received.

Now it so happens that in the charter proposed by Mr. Edson the mayor is clothed with the power to remove and appoint at will a majority of this Board of Apportionment. It follows that were such a charter to become law the mayor would comprise in himself both the legislative and executive powers of the city government. Such a scheme violates all recognized principles of government. It would give the city a mayor with absolute power as an executive, and through this an absolute control over the purse. It is surprising that Mr. Edson should propose amendments to the charter making such a transformation. If the mayor of New York city is to be made a responsible executive officer, with power of appointment and removal (as should be done), then the city council should be given control of the purse. Nearly every city in the country is affected by a confusion of the executive and legislative functions. This confusion may be traced to the fact that in earlier days, when our cities were small, there was so little to do that practically no harm resulted for the time being through members of a town council performing both executive and legislative functions. When Mr. Edson proposes a charter for simplifying and improving New York's government, he should take care to erect a legislative check not dependent for its existence on the will of the mayor.

We give place elsewhere to an extract from the letter of Mr. Abram S. Hewitt to Representative Cox on the iron-ore question. It is unfortunate that at this juncture Mr. Hewitt is unable, through illness, to occupy his seat in the House. It is plain that a revolution is going on in the iron industry of the United States, in the course of which the manufacture must be given up at unfavorable points owing to the necessity of seeking the point of cheapest production. This point is in the southern states. Mr. Hewitt, as an ironmaster, declares that the duties on iron ore and on scrap iron are unnecessary impediments to the cheapening of the cost of iron in the United States, and that they should at once be abolished.

Our Washington correspondent sets forth the situation regarding the depreciated silver dollar and the prospect of legislation in relation thereto. Also in this issue will be found a letter from a clear-seeing correspondent at Richmond regarding the threatening flood of silver, and another letter from Professor Henry C. Adams, of Ann Arbor, Mich., in relation to the issue of bullion certificates. The surprising feature about this silver discussion is that so many men persist in believing that legislation can undo what legislation had little or nothing to do in bringing about. Silver fell into partial disuse as money through general causes, of whose effect legislation was only the expression. But here is the Chicago *Tribune* insisting, day after day, that war has been made upon silver. The only "war" we know of is the preference of the world for the bank-check and the clearing house set-off as a means of transferring goods to either silver or gold. War has been made upon both metals, and under the circumstances it is but natural that the more unwieldy metal—silver—should go to the wall.

The situation in France has apparently undergone no improvement. A feeling of uneasiness prevails which has not been without a serious effect on business. Under existing conditions it is seen to be impossible to maintain a stable administration, and the wiser among the politicians are averse to making the experiment. The latest reports are to the effect that M. Fallieres, whose ministry is not yet two weeks old, has expressed his intention to resign; that M. Jules Ferry has declined to undertake the ungrateful and difficult task of forming a cabinet, and that President Grévy has decided to summon M. Brisson for that purpose. Notwithstanding the excitement and mental confusion manifested in recent proceedings of the authorities there have been some encouraging signs of the return of a healthful public temper. Prince Napoleon has been liberated, the indictment against him having been quashed. The expulsion project has been subjected to some very severe criticism. A committee of the Senate elected to consider the expulsion bill, the majority of which were opposed to that measure. In the course of the discussion upon it M. Barthelemy St. Hilaire denounced the bill as unjust and dangerous, and said that everything sought to be accomplished by it was unfair and useless. In spite of the earnest advocacy of the bill by members of the government, it was rejected by the committee. That body in its report states that in its opinion there is no cause for the republic either to feel alarm or to resort to the violent measures embraced in the proposed law. Such a course, the committee says, would be a step on a dangerous path, and one contrary to the ideas on which the republic was founded. It is to be hoped that the judicious and temperate views of the committee will finally prevail.

Affairs in Ireland are again assuming an unfavorable complexion. The investigation of the charges against prisoners charged with the murder of government officials has attracted great attention, and much excitement has been caused by the effort of the counsel for the crown to trace the murders to the members of a formidable political conspiracy. Extraordinary precautions have been taken to secure the safety of members of the Irish government. The authorities meanwhile are pursuing a vigorous course. A true bill for seditious libel has been found against the editor of a leading Irish newspaper, and three prominent Nationalists who were arrested some time ago for making inflammatory speeches were committed to jail upon refusing to give bail for their future good behavior. On the other hand, it is probable that the repressive measures of the government will not have the effect of bringing about a solution of the Irish question by compulsion. Mr. Parnell has issued a communication urging the attendance of the Irish members of the House of Commons at the opening of Parliament next week, when he says events of the greatest importance to Ireland will be discussed. A preliminary meeting of the members will be held to discuss the action of the Irish party during the session. From a hint thrown out by Mr. Parnell it appears not improbable that complications will arise before long within the ranks of the Nationalists themselves. The Irish leader earnestly advocates the adoption of some system of pecuniary compensation to members, and says that if the constituencies do not make an effort in that direction he may be obliged to consider whether he can persevere in the thankless task of endeavoring to keep together an independent Irish party.

PRINCIPLES OF BANKRUPTCY LEGISLATION APPLIED.

Our last issue contained the substance of a series of articles on the principles of bankruptcy legislation which recently appeared in the London *Economist*. The principal points made by those articles were that the bankruptcy proceedings should be from first to last under the control of the judicial authority; that the fullest disclosure of the affairs of the bankrupt should be compelled; that the discharge should not depend on the indulgence or the connivance of the creditors; that a speedy and inexpensive realization and distribution of the assets of the insolvent estate was a prime requisite which could only be secured by the establishment of fixed rates of remuneration for the services of officials: and, finally, that no bankruptcy system could be adequate or complete under which the fraudulent devices by which credit is secured and property collusively alienated by persons knowing themselves to be on the brink of insolvency, were not punished as heinous offenses.

In a previous article on the requisites of bankruptcy legislation in the United States we developed at some length the necessity of abandoning the fee system (which is also condemned by the *Economist*), and devoted some space to the discussion of a point which has no application in England, namely, the necessity of a law which should be uniform in its operation throughout the United States. The latter requirement we saw to be dictated by the extension of commerce and, by consequence, of credit dealings between citizens of different sections of the Union. The former requisite was imperatively demanded in the light of the general experience under the act of 1867, which, as we remarked, on account of the expense attending its administration, was of little benefit to either debtors or creditors, and was repealed mainly on the representations of the latter class. In the article referred to we compared two bills then under consideration in Congress with especial reference to the requirements just mentioned, and we showed that, whereas one of them, the so-called Equity or Ingalls bill, retained the oppressive fee system and preserved the unequal state exemptions, the other, the Lowell bill, abolished the fee system as far as possible, and made the exemptions substantially uniform for all traders throughout the United States.

The appearance of the articles in the *Economist* prompts a return to the topic of our proposed bankruptcy legislation, and also suggests additional grounds of comparison between the two bills most prominently advocated before Congress. It will be perceived that, leaving out of consideration the question as to the manner of compensating officials, which is one of common interest in both England and the United States, and that as to uniformity, which is peculiar to the latter country, the points made by the *Economist* contemplate the more active intervention of the state in bankruptcy proceedings, to be brought about by a more constant and efficient control of the procedure by the judiciary on the one hand, and by the exertion of the criminal authority on the other. It will hardly be questioned that the community has a deep and permanent interest in ascertaining the causes of insolvencies, and in taking measures for their prevention, from whatever cause arising. Again, as regards the large class of insolvencies which originate in fraud and bad faith, the course seems naturally to be suggested to society of punishing as criminal offenses acts like these, pernicious both in their effect and in their example, and by this means of preventing their commission in the future. Upon these points, and upon certain others incidental thereto, it will not be without interest to compare the bills before referred to.

As regards the main points above mentioned very little ground of comparison is afforded by the acts in question. In relation to the degree and manner of the control of the court or of other public officials over the proceedings, the provisions of the short Equity bill, as might be expected, are very meager. They are to the effect that upon petition, "if good cause appear, the court shall adjudge the petitioner to be a bankrupt, appoint a receiver of the estate, * * * and shall proceed to hear and dispose of the cause upon its merits, as the pleadings and proofs may require, and to marshal and distribute said estate among the creditors of the petitioner acccording to the rules and practice of equity." It is also provided that the court shall have power to grant extensions of time for payment and to reduce the amount of indebtedness *pro rata*, for the purpose of allowing the debtor to proceed with his business, to approve any agreement between the debtor and a majority in amount and number of his creditors at any time during the proceedings, to order that all or any other proceedings be stayed or dismissed, to require all claims to be presented to it for determination, and to supervise and control the decisions in interlocutory matters of any standing or special masters in chancery. In regard to the very important matter of the examination of the debtor, or of other persons cognizant of the facts concerning his trade and dealings, this act is silent, and it contains no provisions whatever of a criminal nature.

In regard to all these matters the Lowell bill differs widely from that above referred to. Under it the power of the court extends to all adjudications of bankruptcy; to all causes, questions and controversies arising out of any claim or demand by creditors to share in the assets; to the ascertainment and disposition of all liens, charges and specific claims on said assets; to all claims of the bankrupt to exemptions; to the bankrupt's discharge; to compositions, and "to all matters and things to be done under and in virtue of the bankruptcy by the bankrupt or the assignee or by any creditor who has proved his debt." The control of the court over its officers and over all the proceedings is peculiarly active and efficient under this bill. The provisions concerning the powers of the court in respect to that very important officer, the assignee of the creditors, well illustrate the general tenor of the act in this regard. The court may refuse to confirm an assignee chosen by the creditors, may remove an assignee for cause after hearing, may punish, as for contempt, an assignee who disobeys a lawful order of the court, and may fill all vacancies in the office. The court may order the assignee to temporarily invest the money belonging to the bankrupt estate, and to carry on the business of the debtor when it shall be deemed proper for the interest of the estate as well as of the creditors. It also has complete supervisory power over sales by assignees, and may set aside the same and order a resale. The assignee is required to file an account of his receipts and payments and a statement of the situation of the estate at the expiration of six months from the time of his appointment, and at the end of every six months thereafter until the estate is fully settled. These accounts are to be passed upon by the register. One of the abuses complained of by the *Economist* as having arisen under the English bankruptcy system is avoided by the provision that dividends remaining unclaimed for six months after the final dividend has been declared shall be paid by the assignee into the registry of the court, and that dividends remaining unclaimed in the registry for six years shall be paid into the Treasury of the United States.

The interests of the public are still further guarded, and the efficiency of the court's control is augmented by certain other features of the bill under consideration which may be briefly noticed here. Provision is made for the appointment in each circuit of a supervisor in bankruptcy, who is to be charged with the duty of examining personally into the administration of bankruptcy proceedings throughout the circuit for which he is appointed; to call the attention of registers, clerks and assignees to matters which, in his judgment, would facilitate the speedy and economical settlement of cases in bankruptcy; to report to the court failures on the part of assignees to discharge their duties promptly, and to move the court for action against such delinquents. The supervisor is also required to make to the court in each district within his circuit quarterly reports of his proceedings, and of the manner in which bankruptcy proceedings are conducted in the district, together with such suggestions as may occur to him concerning the improvement in efficiency and economy of bankruptcy administration within the district, and to visit and inspect at least once in three months the office of every clerk and register in his circuit. All books, accounts and records of clerks, registers and assignees are to be always subject to examination by him at his request. In order to secure a full disclosure of the affairs of the bankrupt it is provided that he may be required by the court to attend before a register or commissioner for examination by the assignee, or by creditors, in regard to his trade and dealings, his property and debts, and all matters which may affect the settlement of his estate in bankruptcy. In like manner the court may, upon cause shown, require the wife of the bankrupt, or any person suspected of having assets of the bankrupt in his possession, or of having knowledge of any material facts relating to the assets or dealings of the bankrupt, to appear and submit to an examination. The provision declaring that all proceedings in bankruptcy shall be deemed matters of record may be here mentioned as being in line with those enumerated above, and as tending toward the same end.

The Lowell bill classes among valid objections to the bankrupt's discharge the fact that he has done anything made criminal by the act; that he has made fraudulent transfers of his property; that, being a trader whose annual transactions exceed $5,000, he has failed to keep proper books of account, or that he has, without valid excuse, failed to obey any order of the court. Under its provisions, also, certain debts are excepted from the discharge. These are for the most part debts created by the debtor's fraud or embezzlement, or by his defalcation as a public officer or while acting in any other fiduciary character. In regard to compositions—a fruitful source of abuses in bankruptcy administration—it is provided that no proposal for a composition shall be considered unless it provides for the payment in cash of all debts, costs and charges entitled to priority by the act, and also for the payment of a fixed percentage to the general creditors. A written assent to the proposal must be signed by at least one-third in number and three-fourths in value of all the known creditors, and the proposal and assent must be approved by the court. These provisions, it will be seen, are well calculated to avoid the particular abuses to which this branch of bankruptcy administration have been peculiarly liable.

The bill we have been considering classes among crimes punishable by imprisonment the secretion, concealment or removal, in contemplation of bankruptcy, of property, or of books or documents relating thereto; the alteration, mutilation, or falsification of such documents; the concealment of certain property from the assignee; the failure to disclose to him certain specified facts, and the obtaining goods on credit in contemplation of bankruptcy and with intent not to pay for them, or the disposition thereof otherwise than in the due course of trade. Penalties are also provided for the presentation of fictitious or substantially exaggerated debts or claims by any creditor or his agent or attorney, and for the embezzlement or fraudulent appropriation or transfer by the assignee of any of the assets in his charge to the injury of the creditors, and the making a false oath in, or in relation to any proceeding in bankruptcy is declared to be perjury. There will, no doubt, be some differences of opinion as to the propriety of introducing penal provisions such as the above in a bankruptcy law, and it is doubtless true that an efficient administration of the criminal side of the law is beset with difficulties. But it cannot be denied that many bankruptcies originate in the same moral turpitude that lies at the basis of ordinary theft or robbery. The ruder offenses of this nature tend to decrease in number with the advance of civilization, and the complexity of modern trade relations furnishes a fruitful field for the exercise of the same baneful ingenuity, the employment of which in other directions has been slowly and gradually repressed by the arm of the law. Society cannot with impunity neglect to guard itself from its more secret and insidious enemies, whose offenses cannot be comprehended within the rude and simple criminal provisions of an earlier age. The effects of offenses of this character, it may also be said, are rendered infinitely more pernicious and far-reaching by modern conditions, especially by the credit system which they do so much to destroy. Much may be done toward their eradication by a cautiously and clearly framed law firmly administered. It is the difficult problem of framing such a law which is attempted to be solved in the Lowell bill, with how much success experience under its administration alone can decide.

It was not necessary for us to deal with the subject at this length in order to make known our position in relation to bankruptcy legislation in general or to the Lowell bill in particular. That is sufficiently well known to our readers. What we wish to do is to show how the very carefully elaborated bill in question anticipates the abstract criticism of a leading financial authority, which represents at its best the commercial sense of a great trading nation, and also to urge again upon Congress the

necessity of the passage of a suitable bankrupt law without delay. As we have already remarked, the opposition to such a measure will be found to be confined mainly to those who in one way or another derive a profit from confusion. Opposition of such a character, we need scarcely observe, should furnish a ground for the action of Congress rather than an excuse for its supineness.

MERCANTILE FAILURE REPORTS.

Among other endeavors to serve the business and general public, this journal is engaged in the work of reporting the statistics of mercantile failures in the United States and Canada. As is well known, weekly, quarterly, half yearly and yearly reports are issued. The idea of reporting the number of failures in the United States from week to week, as an index to the condition of trade, had its origin in these columns. Beyond this, for the first time the attempt has been made to bring together statistics showing actual assets as nearly as the difficulties of the work will permit. This in addition to the customary return of liabilities. The *Pall Mall Gazette*, of London, has been led to make question as to the degree of accuracy attained in the work of reporting these statistics in the United States. For this reason it has been thought wise to define as nearly as possible what we consider to be mercantile failures and the conditions which tell for and against approximate accuracy. A failure in the United States and Canada is that of a trader or manufacturer whose business standing has to be taken into account as a matter of ordinary record in the proper conduct of the regular business of a mercantile agency as understood and practiced in the United States. This definition excludes savings banks, but includes all other banks. It should be noted that insurance companies are excluded from our statistical record of failures. It follows from the above definition that the failure of every trader, banker or manufacturer the character of whose operations while solvent it had been necessary to record in the proper conduct of the agency business, should enter into the statistics of mercantile failures. The traders of whom a record is made in the conduct of such business are all those having a distinctive place in the trading community. This said, it has to be added that for every one of the 7,635 failures reported by this journal as occurring during the year 1882 the name and place of doing business had already been given in the columns of the journal itself, save a comparative few at the close of the year, and the details regarding these have since been published. It is believed that the return for 1882, as we gave it out, is as complete as is possible to make it without a general law compelling the registry of traders. It is certain that we can furnish a voucher—*i. e.*, we can give style, location, line of business, etc., of each one of the 7,635 failures reported as occurring in 1882. As to the degree of accuracy attained with respect to liabilities and assets, we can only say that the diligence which reports all the failures for the year coming under the above designation, and is prepared to furnish vouchers for each one, insures the best results obtainable as to the actual condition of the failing trader's affairs. There is no general bankruptcy law in the United States at present. In its absence about two-thirds of the failures occurring are registered under the state insolvency laws. As regards these failures the facts as to liabilities and assets are of record, and are, therefore, officially accurate. The facts as to the remaining third of the failures are obtained from the creditors and others in a position to know. It is believed that the results thus brought together are approximately accurate; as accurate, indeed, as is possible without compulsory registration of all traders.

RECENT GROWTH OF OUR FOREIGN TRADE.

In his report on the foreign commerce of the United States for the latter half of the calendar year 1882, Mr. Joseph Nimmo, Jr., Chief of the Bureau of Statistics, makes the announcement that the value of our exports of merchandise exceeds that of the latter half of 1881 by $17,434,080, and that the value of the imports of merchandise are likewise in excess of those of the corresponding period of the preceding year, the amount being $28,201,571. The change is naturally enough ascribed to the augmented crops during the past year. This source of the ready growth of exports is fully explained by the fact that 80 per cent. of our exports consist of agricultural products or produce derived therefrom. Returning for a moment to the record of the foreign trade in the latter half of 1882, it is noted that the excess of the value of exports of merchandise over that of imports during the same period was $54,572,222. During the whole of the fiscal year ended June 30 last the excess of the value of exports over imports was but $25,902,683. The Chief of the Bureau of Statistics, in commenting on the influence of the crops of 1882 on the past six months exports, points out, on data furnished by the Agricultural Bureau and the National Cotton Exchange, that there was 22.8 per cent. increase in the yield of cotton over the crop of 1881, 32.2 per cent. increase in wheat and 36 per cent. in corn. The value of the exports of cotton and breadstuffs during the latter six months of 1881 and 1882 show heavy gains, while those of provisions do not. The total value of cotton exported from July to December, 1882, inclusive, is given at $124,265,602, against $99,438,155 for similar exports in the latter six months of 1881, the gain in 1882 being $24,827,447. In breadstuffs exports the totals for the half years were $120,467,835, against $115,407,926, a gain of $5,059,905 in the latter half of 1882. The value of the shipments of provisions dropped from $67,198,271 in the six months of 1881 to $53,315,006 in the latter half of 1882, a loss of $13,883,265. Thus, while the reaction in exports of cotton and breadstuffs due to increased crops has already set in, no visible improvement is recorded in the case of provisions as yet. Mr. Nimmo ventures the prediction, however, that "an increased exportation of provisions appears to be probable in view of the largely increased crop of corn and the fact that the hay crop of 1882 was large and pasturage generally abundant." The comparative statement of imports and exports for six and twelve months ended December 31 last, is as follows:

VALUE EXPORTS MERCHANDISE IN 1881 AND 1882.

	Six months.		*Twelve months.*	
	1882.	1881.	1882.	1881.
Domestic	$416,450,424	$399,784,457	$749,905,699	$814,162,951
Foreign	9,175,147	8,407,034	18,070,638	19,380,176
Totals	$425,625,571	$408,191,491	$767,976,337	$833,549,127
Imports	371,053,349	342,851,778	752,841,145	670,209,448
Excess imp'ts.	$54,572,222	$65,339,713	$15,135,192	$163,339,679

The excess value of exports over imports of gold and silver in the latter six months of 1882 was $75,338, and in the whole of the calendar year 1882 was $33,537,221. The excesses were of imports in the latter six months of 1881, as well as during the whole of that year, the value of the former being $26,516,794, and of the latter $49,327,448.

SHARE OF THE UNITED STATES IN THE WORLD'S TRADE.

The annual reports concerning the commercial relations of the United States with foreign countries during the fiscal years ending June 30, 1881-82, have been published and distributed by the Department of State. The reports are made by the consular representatives in the different countries with which the United States has commercial intercourse. The whole is accompanied by a letter from the Secretary of State, in which he comments on the general results, and expresses views respecting the development, or the reverse, of our foreign trade. The pamphlet comprises 373 pages, and is the outcome of the series of monthly publications of consular reports, synopses of which have from time to time been presented in these columns. The title given to this publication is the "Commerce of the World and the Share of the United States Therein." This is to some a fascinating subject, and the book on inspection fully merits the first rank in the entire list of State Department consular commercial publications to date. Anything in the nature of a comprehensive synopsis of the results of the reports contained in the volume is almost out of the question in an article within the limits of this one. The subject is too large. This will be easily understood when it is explained that the foreign commerce, and the share of the United States therein, of 21 countries in Africa, 4 in North America, 13 in South America, 6 divisions of the West Indies, 12 countries in Asia, Australasia and 17 countries of Europe are comprehended with more or less detail—in all, the commercial relations of 74 countries, with particular attention to the share therein possessed by the United States, by Great Britain and by France. Statistical recapitulations are given of the general results shown in reviewing the commerce of the various grand divisions of the several continents, and last of all of the world. In the last review referred to comparisons are instituted between the aggregate exports and imports of Great Britain, France and the United States, and the totals presented are, to say the least, instructive and suggestive. A summary of the State Department's "Statistical Recapitulation of the Commerce of the World," together with the exports and imports of the three countries mentioned, will be of interest. The values given below are in thousands of dollars, *i. e.*, with three ciphers omitted, and for the calendar year 1880 for foreign countries and the fiscal year 1880-81 for the United States:

Total trade of	*General imports.*				*General exports.*			
	Total imports.	*From Gt. Britain.*	*From France.*	*From U. States.*	*Total exports.*	*To Gt. Britain*	*To France.*	*To U. States.*

* Reports of four leading countries only.
† Reports of six leading countries only.
‡ Countries arranged in order of value of imports from United States.
§ A discrepancy here explained below.

The African exhibit makes Great Britain conspicuous, and quite justifies the anxiety recently displayed by France to gain prominence in the commerce of Africa, notably in Algiers, Tunis, Madagascar, and, on the west coast, at Senegal. Naturally, the United States cuts a very small figure with a total of $4,203,000 worth of African exports, and imports valued at $6,041,000, against twenty times that value of exports to the "dark continent" from Great Britain, and twelve times the value of British exports.

In North America the United States distances all competitors in its trade with Mexico. The exports to Mexico, as shown above, more than equal those from both Great Britain and France, and our imports from Mexico are $2,700,000 heavier than the combined shipments there from the two countries compared. British North America naturally places the bulk of her foreign trade with the mother country, but the United States ranks a good second. The United States imports nearly one-half as much as Great Britain from the Central American states, and more than four times as much as France. In shipments to Central America the proportions are nearly one-half as much as Great Britain, and more than twice as much as France.

But four leading countries of South America are included in the tabular summary, those from which the United States exports over $1,000,000 worth of goods annually. In the case of Brazil, the comparison, as made above, is hardly satisfactory; for while the United States exported to the extent of but $9,200,000 worth of domestic products, against $18,648,000 sent by France, and $33,607,000 by Great Britain, she imported from Brazil that year goods to the value of $48,382,000, against $15,761,000 by France, and $25,563,000 by Great Britain. This reflects the want of efficient direct transportation between this country and Brazil, not to mention the lack of an American merchant marine, for there is a possibility of a mammoth increase of trade between Brazil and the United States.

France and the United States exported and imported goods to and from the United States of Colombia, each to an extent greater than Great Britain, though the amounts did not vary materially, being distributed with striking equality. While Great Britain's exports to the Argentine Republic—$12,349,000—more than equaled those from both France and the United States, the latter's being but $3,121,000, British imports from that country were but $5,169,000, only a trifle above those to the United States, and less than one-third of the value of those to France. The United States exported more to Venezuela than either of the other countries named, and imported one-third more than them both. The foreign trade of South America, going to Great Britain, the United States and to France, is apportioned between them, as shown by the totals above, in the order just given. While France's South American imports are considerably in excess of those of the United States, the exports from the United States to South America are nearly 50 per cent. in excess of those going there from France, and but 25 per cent. less than those from Great Britain.

The West Indies import more from the United States than from France or Great Britain, the excess over the latter being one-tenth and over the former one-third. Our imports from the West Indies are more than 50 per cent. greater than those of the other two countries combined. (For the American continent as a whole, Great Britain takes first place in both exports and imports.) France takes about 40 per cent. less South American products than the United States, and Great Britain over one-third as much as this country. The British imports from America, north and south, are four times those of France in value; but those to the United States are valued at $198,883,000, against $172,626,000 to France and $681,000,000 to Great Britain.

In the Asiatic trade, including only the six leading countries, the United States ranks third in the tabular comparison, with one exception, that being as an importer from Japan, in which she is first, France second, and Great Britain third. The Australasian foreign trade, exclusive of intercolonial commerce, shows British takings $125,000,000, and shipments therefrom $100,000,000; French, none; and the United States exports but a meagre $7,403,000, and imports $2,088,000. The table presented above shows the European countries in

the order in which they were imported from the United States. Imports to European countries from the United States vary slightly from that order, the shipments of Italy placing that nation fourth as a customer for our products, instead of sixth, which it was as an importer to this country, Belgium fifth instead of fourth, Austria-Hungary sixth instead of twelfth, Spain seventh in both cases, Russia eighth instead of ninth, and Holland tenth instead of fifth. The proportions of the total exports and of the imports of each European nation named above, possessed respectively by Great Britain, France and the United States, will be the better illustrated by the following table:

	—Imports, per cent.—			—Exports, per cent.—		
	From Great Britain.	From France.	From U. S.	To Great Britain.	To France.	To U. S.
Great Britain...	....	10.5	27.01	....	9 39	12.7

† The export percentages are arrived at after making correction in Spanish returns as explained below.

The advantage of this table, which we have taken pains to compile, is that the third and sixth columns of percentages show at a glance what proportions of the total foreign trades of the various countries named in the left-hand column are possessed by the United States, and the exhibit, as a whole, gives a clearer view of the relative holdings of the three great commercial countries specified in the trade of Europe.

The total value of exports from Spain, it will be noticed, is less than the value of the goods reported to have been shipped from Spain to France and Great Britain. Thus the table reads: total value of Spanish exports $106,680,000; value of Spanish goods exported to Great Britain $52,002,000; to France $70,888,000, and to the United States $5,433,000. The total of exports to three countries accounted for aggregates $128,323,000, which suggests an inaccuracy in placing the aggregate Spanish exports at but $106,680,000. On examining the report on the foreign trade of Spain given elsewhere in the book it is found that the total value of exports, as given in the table above, is the Spanish report as to value. The Spanish government, however, furnished no returns of "exports by countries," and so the values of imports from Spain by France, Great Britain and the United States were obtained from the records of those countries, after the cost of labor, shipment, commissions and other enhanced values had apparently been added. This explains the absurdity appearing in the table of Spanish exports, shown above, although the compiler of the table in the State Department furnished no foot-note to explain the manifest error. A further examination of the reports of Spanish exports in detail, together with values credited to them on arrival at destinations, indicates that an average excess value gained on arriving in the foreign (to Spanish) markets under discussion is 33⅓ per cent. In the table of percentages last given, therefore, without being prepared to vouch for the absolute accuracy thereof, we have reckoned the proportions of French, British and American imports from Spain, as related to the total value of Spanish exports on the basis of the foreign (to Spanish) valuation, or 33⅓ per cent. higher than the figures given in the government table's total. Thus, instead of $106,680,000 as the total value of Spanish exports, $142,240,000 is employed, which should be used in connection with the French, British and United States figures following it.

This little slip in the preparation of one of the most interesting comparative trade tables, however, suggests the importance of a subject to which the Secretary of State himself alludes—the varying valuations of merchandise and other imports between ports of export and entry. In most cases noted, the natural increased cost of the imported products is shown by substantial gains in totals of valuation at the port of entry. There is a marked exception, however, in the case of the aggregate of French imports during the past ten years. The totals read thus:

	Value exports from the	Value when exported.	Value at end of journey.	Increased value.
U. S. to France.....		$547,706,000	$841,598,000	$293,892,000
France to the U. S....		648,930,000	520,302,000	*128,628,000

* Decrease.

The Secretary of State quite pertinently remarks that the radical difference here shown between the French and American valuations of customs "would seem to deserve investigation."

The points covered by this article comprehend those of the report under discussion, which are, perhaps, of the broadest character only. There remains, however, a mine of valuable data concerning the foreign trade of "all nations," and the relative share of them credited to the leading competitors for the same. Side by side with the annual reports of the Bureau of Statistics this consular report on "the commerce of the world," even though possessing evidences of hurry or a want of proper care, may well be given a place as a work of reference.

OCCASIONAL NOTES.

Mr. Joseph Hatton, who has been contemplating the commercial situation at Manchester, writes to the New York *Times*, enforcing the views of Consul Shaw in regard to industrial education, and says that in all the trade centers which he has recently visited there is apparent a careful preparation of the young for the great industrial race they will have to run when they are men. England, he says, has fully estimated the new conditions of competition which will characterize the future, and there is evidence on all hands of a vigorous and intelligent preparation for the coming work. This with reference to industrial competition between the United States and England. The writer gives some particulars of an interview had by him with Consul Shaw, of Manchester, in which the latter, in response to Mr. Hatton's questions, expressed the opinion that the United States could afford to make a considerable reduction in the tariff on cotton goods. In considering a manufacturing competition with Manchester, he said the United States would have to take into account the special advantages of that place in the production of cotton goods. There were several reasons why Manchester could manufacture better and cheaper goods than the United States. One of these was the humid atmosphere of Manchester, which was an advantage not possessed by the United States. Another advantage is the employment of "half-timers," or children under the age of fourteen, who work part of the day in the factories, and who early become skilled workmen. Still another advantage on the side of the English manufacturer is that the mills descend from father to son. They conduct the business themselves, and do not depend on managers. An allowance of from 17½ to 20 per cent. should be enough, however, to equalize the differences. Mr. Shaw said that he found everywhere evidence of an increase in the means of production, but also noticed that trade did not advance in the same proportion financially. In regard to the chances of American success in competition Mr. Shaw expressed the opinion that, if the United States is to advance in competition, it must exercise a sharp oversight and a wise and persistent pressing forward in all foreign markets. He recommended the adoption of the English system of having certain members of a firm resident among its foreign customers. In this way he thought the tastes and needs of distant localities could be best ascertained, and a basis established for a safe and lucrative foreign commerce.

According to recently published statistics the wine harvest of last year was one of the worst ever known in France. The showing made by the figures, except in one particular, is very bad, it appearing that the production of wine was but little more than half the average for the two decades between 1858 and 1878, and was about a third less than the average for the decade immediately preceding last year, a period during which the production fell off greatly in consequence of the ravages of the phylloxera. France, which used to be an exporter of wine, became an importer last year. The results, of course, have been serious in the extreme, and, taken in connection with the prevailing agricultural depression, have not been without influence upon the political situation. Much of the feeling of discontent which prevails in France is attributed to the depression under which this interest and other industries connected with it have suffered. The one encouraging fact developed by the figures is that last year the area under vines in the departments where the phylloxera prevails increased, from which it is apparent that the disease has been checked.

At the first annual meeting of the London Chamber of Commerce, which was held recently, much satisfaction was expressed at the prosperous issue to which most of the measures proposed by the chamber had been brought. Mr. Tritton, in moving the adoption of the annual report, said that the efforts of the chamber in endeavoring to secure the establishment of a ministry of commerce had been so successful that in a short time the appointment of a minister to take charge of that department might be expected. Sir George Chambers, in seconding the motion, expressed the hope that the establishment of the chamber would lead to the settlement of commercial disputes by arbitration instead of by law. Mr. S. Morley agreed with those who thought it a great mistake that a chamber of commerce had not been established many years ago in the city of London. He pointed out the extent of the influence which such chambers exercised through the circulation of information, the discussions which took place at their meetings, and the legitimate pressure which they brought to bear on members of legislative bodies in connection with commercial questions. He spoke of his own efforts to bring about an amendment of the bankruptcy law, and said that his experience of late years had been that creditors had shown a tendency to neglect their duty, and that, although the act of 1869 gave creditors power to take into their own hands the liquidation and distribution of assets, they had, as a rule, divested themselves of all interest in the matter, and the result was that professional trustees had secured their own election and determined their own emoluments. He said there could be no doubt that it was the intention of the government that in the next session a reform should be brought about in the bankruptcy laws, and added that it was intended to try in one of the large committees, to be appointed by the House of Commons, the experiment of having the question disposed of by a committee which would be essentially commercial, though, of course, it would have legal assistance.

The opinions expressed by Mr. Tritton, concerning the probable establishment of a ministry of commerce, was confirmed by some remarks of Lord E. Fitzmaurice, M. P., in response to the toast "Her Majesty's Government," proposed by the governor of the Bank of England at the annual dinner of the chamber. He said that there had never been a time when commercial legislation and commercial questions had occupied a more prominent place in the public mind than at present. The last session was regarded by those who simply thought of great party questions and measures as having been a lost session, but, even in that session, disappointing as it was, some measures of great interest to commercial bodies were passed. The next session, he continued, was likely to see a reform of the law of bankruptcy and the first step taken toward the codification of the commercial law, a matter of vital interest to the commercial world. The members of the chamber were likely to hear a good deal about the establishment of a ministry of commerce and of agriculture, or of one ministry for both. He added that by an alteration of the standing orders of the House of Commons a certain standing had been given to the Chamber of Commerce with regard to private legislation. The speaker's remarks may be regarded as authoritative, for the reason that he succeeded to the post of Sir Charles Dilke at the head of the commercial department of the British Foreign Office when the latter was promoted to a seat in the cabinet.

SPECIAL CORRESPONDENCE.

THE SILVER QUESTION AT WASHINGTON.

Washington, February 8.—There is a renewal of the silver-dollar agitation in Congress. This is due to the letter of Secretary Folger calling attention to the fact that it will be necessary for Congress to construct some more vaults, or to stop the coinage of the silver dollar, and to the pendency in the House of different resolutions and bills which propose the issue of additional silver certificates. The agitation thus far is mainly restricted to the rather narrow limits of the House Committee on Coinage; but the Senate Finance Committee has before it the resolution of Mr. Morrill, which proposes to put into effect the spirit of the letter of Secretary Folger by suspending the coinage of silver dollars. The deliberations in the House Coinage Committee illustrate the density of the ignorance which still prevails upon certain fundamental economic questions in the ranks of both parties, and also the peculiar methods by which the present organization of the House was effected. Mr. Keifer, in order to make himself Speaker, was compelled to resort to many "deals," not the least extraordinary of which was the one which resulted in making Fisher, of Pennsylvania, a monometallist, chairman of the Committee on Coinage, while the majority of that committee was composed of the most extreme silver men and greenbackers.

But, as a practical fact, this silver-greenback majority of the Committee on Coinage represents the views of the majority of the members of the House much more accurately than does Mr. Fisher, the monometallist, and, much as some of the extreme views of the majority members of this committee may excite the ridicule of those who believe in sound theories of finance, as a matter of practical legislation those views are not to be disregarded. It is not to be inferred from this statement that the extremist opinions of the silver men will result in any enactment tending still further to increase the volume of an inflated currency; but the opinions of these gentlemen are of sufficient importance to allow the deduction to be made that the contrary views entertained by Secretary Folger, the administration and the majority of the eastern Republicans, are not likely to prevail. The practical result will be that, whether or not more vaults shall be erected for the storage of the silver dollars, no resolution will be adopted providing for the discontinuance of the coinage of those dollars. Mr. Morrill, chairman of the Senate Finance Committee, is very confident that the resolution for the discontinuance will be adopted by his committee, and it is very possible that such a resolution could be passed through the Senate; but there is no probability that the House would approve it.

This agitation has called attention rather more sharply than before to the existing volume of money. The Director of the Mint, Mr. Burchard, himself a bimetallist—who, however, agrees with S. Dana Horton, secretary of the International Monetary Conference, that the cause of bimetallism will be promoted by a suspension of coinage in the United States until an international standard can be adopted—has prepared a statement showing the condition of our circulation on February 1, 1883. The statement is of a character to attract the attention of those who have not yet been able to solve the problem as to the indefinite continuance of a threefold system of currency. The total amount of circulation on February 1 was $1,659,239,583. This is $1,000,000,000 more than a few years ago was supposed to be necessary for all the commercial requirements of the country. Of this total circulation all except $375,245,582 is in active circulation. This volume of bullion and currency is distributed as follows:

Gold bullion	$51,149,382	Silver certificates.	$72,745,470
Silver bullion.....	3,761,958	U. S. notes.....	346,681,016
Gold coin.....	527,378,992	Nat'l bank notes..	361,459,151
Silver dollars.....	135,405,080	Fractional cur'cy.	7,018,093
Other silver.....	80,563,501		
Gold certificates..	72,776,940	Total.....	$1,659,239,583

The statement permits an accurate understanding of the extent of the silver-dollar circulation. The total amount of silver dollars coined is $135,405,080. The amount in banks and active circulation is $37,874,111. The amount in the Treasury is $97,530,969. But a popular misconception has arisen from the careless reading of the Treasury statements as to the amount of silver dollars in the Treasury. While it is true that there are 97,530,969 silver dollars in store, it is also true that there are outstanding $72,745,470 silver certificates, of which $68,438,820 are in active circulation. These silver certificates are only issued against silver dollars, so that the whole amount of silver dollars in the Treasury, against which silver certificates are not outstanding, which, therefore, may be considered as a surplus fund to be paid out or hoarded, is about $29,000,000. The $68,438,820 are in active circulation, in use, interchangeably, with paper legal tenders.

The only surplus of silver dollars in the Treasury, therefore, available for immediate use, is about $29,000,000.

The average amount of coinage monthly is still restricted to the legal minimum of $2,000,000, so that, at the end of the calendar year, if none of the silver dollars should be paid out, or silver certificates be issued against them, the amount of silver dollars then in possession of the government against which silver certificates would not have been issued would be 53,000,000. But silver dollars are being used much more generally by the government in its ordinary disbursements than is supposed. In speaking of silver dollars, it must always be borne in mind that, so far as practical Treasury uses go, silver certificates are meant. The first experiment in resumption was begun under Judge Richardson, Secretary of the Treasury, when, possibly, a tumbler-full of ten-cent pieces was disbursed from the Treasury cash-room in a day. Then followed the percentage system of disbursements, under which the treasurer paid out 10 per cent. of all disbursements in silver coins. Since the issuance of the silver certificates, however, in the latter part of Secretary Sherman's administration, the discrimination against the disbursement of silver has been abandoned, except as to the payment of the principal and interest on the public debt. The Treasury Department very properly considers the bonds a

sacred obligation, and, notwithstanding the demands of the bimetallists, that the letter of the law only calls for the payment of the bonds, principal and interest, "in coin," it is very certain that the present Republican administration of the Treasury will not pay the principal and interest of the public debt in anything but gold.

Of all other disbursements, however, silver certificates now form an important part. They are used indiscriminately with paper legal tenders for the payment of salaries in the government departments, for the payment of salaries of congressmen, and in the ordinary disbursements on warrant. It is estimated at the Treasury that, in the last fiscal year, some $40,000,000 in silver and silver certificates were paid out by the Treasury in the ordinary course of its business. There were $20,000,000 paid out over the counters of the mints, and a larger sum was expended in the purchase of silver bullion. If the ordinary disbursements of the Treasury shall continue substantially as they are, therefore, at the end of another fiscal year the amount of silver dollars against which silver certificates will not have been issued will not be appreciably larger than it now is. The store, however, against which the silver certificates will be issued will of course increase, and additional vault room will have to be provided.

Meanwhile, the ultimate solution of the silver-dollar problem is not to be found by this Congress, and will be again postponed into the indefinite future. The bi-metallists themselves offer no better explanation of the final outcome than the statement attributed to Tabor, the Colorada bonanza king, who has just taken his seat in the Senate. He is quoted as saying that he is not prepared to discuss the silver question on its merits, but that it is an absurdity for the government to maintain that there is not room enough on the Pacific coast to build any more vaults to store silver.

THE FINANCES AND GOVERNMENT OF LONDON.

London, January 25.—If it had fallen to the lot of any legislators to establish the form of local government in this metropolis it is very certain that they would not have established it upon the lines now existing. Nothing remains in London as it was originally planned. The city has, so to speak, outgrown its clothes many times over, and at last, when it was found that the original garments could no longer be distended, they were left to enwrap the central portion and new ones were provided for the suburban districts. These suburbs have since then practically become part of the city, and yet we find that the systems within and without the old city boundaries differ in a remarkable degree. Within a certain boundary, of which there are no outward or visible signs, but which a householder would not be long in discovering, the Lord Mayor, his court of aldermen, and the host of the common council hold their sway, while around them on every side a comparatively modern body — the Metropolitan Board of Works—holds supreme authority, and as is not unnaturally the case, the two do not work harmoniously together. To say the least of it, there is a great deal of friction showing itself most prominently upon really trifling matters. For instance, the time-honored corporation of London, when they demolished practically their final landmark in the destruction of Temple Bar, naturally sought to commemorate that ancient obstruction by a patriotic and emblematic memorial. It may have been that that memorial was more costly than beautiful, but that is no reason why the Metropolitan Board of Works should have refused them permission to place a lamp-post upon the west side of it, because it would have extended a couple of feet or so without the city boundary. The position is this: the newer organization does not scruple to avow itself superior to the great city magnates, and even in the city itself people are a little shamefaced in respect to their titled ruler, who, all things considered, dispenses justice and hospitality at the Mansion House and the Guildhall not so very badly after all. Not but that there are a great many abuses in the City of London, as there are in many more modern corporations. There are many instances of comparatively worthless plots of land, bequeathed to guilds three or four hundred years ago, being now worth pounds sterling per square foot, and the purposes for which they were originally intended having in many cases been utterly lost sight of, the emoluments derived therefrom go to swell the assets of the city guilds, which, indeed, would long since have ceased to exist had it not been for these ancient bequests. Still, of late years, much has been done to remedy abuses of that class, and though their charities, of which there are many, are wastefully managed and offer many pickings to those behind the scenes, they are nevertheless of considerable importance. The schools especially, established by some of the city guilds, are particularly well managed, and if the city companies were abolished, it would be a difficult question to decide as to what should be done with their numerous properties. All this serves to show that in remodeling the system of government within the metropolis the present ministry have a difficult task before them. If people are a little inclined to make fun at times of "my lord mayor," it is different with them when it is proposed to abolish him altogether. In fact, the city dignitaries, much as they are abused, have occupied for some centuries a position which it would be well-nigh impossible to reproduce in another body. There is probably no more useless ceremony extant than that of presenting the "freedom of the city in a suitable casket," yet it really in this country has a recognized significance, and if the funds for the jeweled casket and the necessary banquet are provided from sources which we do not know much about, there are many people in this country who would be sorry to see this hospitality curtailed. The Metropolitan Board of Works, with all their superiority, would hardly be a fitting body to do honor in this way to the ministers of the crown or the distinguished strangers who regularly accept the invitation of the lord mayor.

Turning however from the sentimental to the financial and administrative sides of the question, there is certainly much to be desired. Every improvement which encroaches upon the inner or outer domains has to be specially arranged for, and in numerous instances these public works have been assigned to the Metropolitan Board, while a money contribution has been demanded from the corporation. In this way the debt of the Metropolitan Board has grown much more rapidly of late years than that of the city. At the present time the debt of the former body may be stated at £21,000,000, while that of the corporation is about £5,500,000, making together £26,500,000 levied upon property which is assessable at an annual value of £31,000,000, consequently the entire debt of the corporation and Metropolitan Board does not nearly amount to a year's rental upon the properties liable. If the debts of the metropolis have grown quickly in recent years the growth of wealth has been even more remarkable, as the following figures will show:

	Metropolitan Board.	*City Corporation.*
Assessable value, 1870	£18,700,000	£2,400,000
Assessable value, 1883	27,800,000	3,450,000
Increase	£9,100,000	£1,050,000

In the past thirteen years, therefore, the assessment value has increased by more than £10,000,000, and it is well known that the actual growth of the rental is considerably in advance of that figure. The whole of the money raised by loan, and a very large sum raised by rates in addition, have been expended upon works of improvement, mainly roadways, parks, drainage, the Thames embankment, markets, artisans' dwellings and the School Board, and in this way upward of £35,000,000 has been appropriated in the past twenty-five years, during which the Metropolitan Board of Works, in its present form, may be said to have existed. Some of this outlay brings in a moderate revenue, including the artisans' dwellings and the street improvements, while the corporation of London derive a considerable income from their various markets and the Royal Exchange.

With regard to the revenues of these two bodies, it appears that the income of the Metropolitan Board in 1882 amounted to £1,288,880, of which £285,000 was received from the coal and wine dues, small charges which the board is entitled to levy when those goods enter the precincts of the metropolis. A further £33,000 was derived from the fire-insurance offices and the government towards the maintenance of the fire brigade, the insurance offices paying at the rate of £35 per million of insurances. Rents derivable from properties produced £81,000, and interest upon loans to local vestries, district boards, and, above all, to the School Board, brought in £148,000. There were also a number of trivial items for testing meters, inspecting of buildings, etc. But the most important item of all was the amount raised by the metropolitan consolidated rate, which brought in the sum of £716,000. This rate, which amounts to about 6¼d. in the pound, or rather to over 2½ per cent., is levied by the Metropolitan Board upon the various parishes, and is left to be collected by the parish authorities in conjunction with their own rates. These rates, consisting of poor rates, highway rates, School Board rates and police, of course raise the total to a point far in excess of the 6¼d. already named. In fact, in different parts of the metropolis the rates vary materially. In this respect the city is not heavily taxed. Here in 1882 the total rating amounted to 3s. 6½d. in the pound, of which the odd 6½d. was absorbed by the School Board, leaving the 3s. to be apportioned as regards 1s. 3½d., or 6½ per cent., for poor relief, 5d., or 2 per cent., for police, and the balance for sewerage and other purposes, including the contribution to the Metropolitan Board. In some parts of the metropolitan area the rates are upwards of 5s. in the pound, or 25 per cent. on the assessment value, and it is to be regretted that they are not rendered more uniform over the entire area. The local vestries and guardians who are thus made to do duty by the Metropolitan Board are to a large extent composed of tradesmen who are interested in the contracts and expenditure they incur, and although there is a rigid audit and supervision maintained it is impossible to prevent abuses from creeping in.

It is to be hoped, therefore, that, if during the coming session the government make up their minds to deal vigorously with the divided management in this city, they will be able to unify the financial administration while interfering as little as may be with the prestige which in certain ways the corporation possesses. This, it appears probable, will be the line taken, and if the entire metropolis is to be managed by a reformed corporation which shall embrace the Metropolitan Board and silence opposition the gain will be great.

NOTES FROM THE ANTIPODES AND HAWAII.

San Francisco, January 24.—The Pacific Mail steamship City of New York arrived on Monday night from Sidney and way ports. In New South Wales the principal interest centered in the signal defeat of the Parkes ministry in Parliament and at the polls, and the resignation of Sir Henry Parkes and his colleagues, which subsequently took place. The point turned upon the Land bill. Parkes had abandoned his old democratic principles and was bidding for the support of the squatters; he had, moreover, alienated several million acres of public lands in the last four years without increasing settlement, and the country had got tired of his dictatorial manners, trickiness and vulgarity. The new government is a strong one. Sir Henry Parkes visited this country last year in a semi-official capacity, but on his return he never communicated to the governments of the other colonies, who had commissioned him, nor to his own colleagues, the result of his American visit. What Americans are interested in, however, is the renewal of the Pacific Mail service; but on this subject Sir Henry Parkes has been as dumb as an oyster. I am credibly informed that the question had not even been considered by his administration, and I know that no sign could be extracted from him on the subject by the New Zealand government, which desires its renewal. Such are the advices by the last mail.

Business is good in the Australian colonies, without speculation. There has been showery weather in New South Wales, and the yield of wheat harvested is unusually heavy. The Union Steamship Company of New Zealand has the virtual monopoly of the inter-colonial trade, and is about to run large steamships between Melbourne and Fiji, employing smaller vessels to collect freight among the islands of the Fijian archipelago. Its vessels, likewise, run between Fiji and Sydney as well as from Fiji to New Zealand direct. This inter-colonial trade is rapidly expanding. A large sugar refinery is to be built at Auckland to treat Fiji sugar.

The efforts made to concentrate the wool sales at the chief cities of the colonies, instead of shipping to London and waiting returns from the regular series of wool sales there, are promising to be successful. The attendance of English and foreign buyers is increasing, and the future outlook is good. This local demand is a great advantage to wool-growers. The wool clip in South Australia is $750,000 short of last year's value. The partial failure of the $5,000,000 South Australia loan in London causes uneasiness in Melbourne, the Victorian Parliament having passed a $20,000,000 refunding loan bill. This loan is to be placed on the London market early this year. New Zealand has also a $15,000,000 public works loan to place. It is by far the most energetic community in the South seas, and has greater predilection for the United States than any of the Australian colonies.

The attempt to lift the sunken steamship Austral, in Sydney harbor, by means of pumps, has been suspended by orders from the directors in London, who fear that this plan would break her back. A coffer-dam is to be built around the vessel, which will be a tedious process. She was one of the magnificent new steel steamships of the Orient line.

The New Zealand government offer a bonus of $100,000 a year for a steam service to England, the vessels to be fitted up with refrigerating compartments, and to make the voyage in not over fifty days. The New Zealand Shipping Company has tendered for the service, and contracted in England for the building of steel steamships, of 4,000 tons gross register and twelve knots rate of speed, to undertake it. Meanwhile the British King, 3,559 tons register, was chartered by the company and was advertised to sail from London as the pioneer boat of the line on January 20. This line expects to make the voyage in forty-five days. Business is somewhat dull in New Zealand, with the banks curtailing credit. The Brush electric light has been widely introduced in the colonies. A fine granite graving dock has been opened at Port Lyttelton, New Zealand.

Honolulu reports are uniformly favorable. Everything is progressing, business is good, and people are confident that the reciprocity treaty will not be abrogated. The total export value for 1882, from the islands, was $8,085,931.54, as against $6,671,026.38, showing an increase of $1,414,904.96 for the year. During 1881 the sugar export was 93,789,483 pounds; in 1882 it was 114,177,933 pounds. Rice increased from 4,486,775 pounds in 1881 to 7,682,700 pounds in 1882. The wool export was about equal each year. The Honolulu press regret that the exports are being narrowed down to a few commodities, but if these pay best there is no cause for grumbling. A sugar crop of 68,000 tons is anticipated in 1883.

A labor vessel, which had been sent to the New Hebrides, in the South seas, was soon expected to return with colored labor. This is one of the islands which suffered by the labor agents of Queensland and Fiji. The natives, according to the statement of the Rev. Mr. Macdonald, a missionary, published in London, do not leave their homes there willingly, but the Hawaiian Planters' & Labor Supply Company may have greater powers of moral suasion than the Australians.

LETTERS TO THE EDITOR.

BULLION CERTIFICATES.

To the Editor of BRADSTREET'S.

SIR—Certain facts respecting the monetary condition of the United States invite the attention of statesmen, men of business and economists, very imperatively to the necessity of some present appropriate modification of the existing monetary laws. Thus, in the first place, the amount of bonds in the hands of the public available for the security of our national bank circulation is rapidly being reduced to a point at which the maintenance of the system is endangered; and, in the presence of the prevailing public sentiment respecting debt payment, it would be impossible even were it desirable to secure its perpetuation by continuing the bonded obligations.

Much more pressing than the banking question, however, is the question that arises on account of the plethora of silver in the Treasury vaults. The request from Secretary Folger for an appropriation with which to provide additional storage capacity if the existing coinage laws are to be maintained, as well as various propositions, both in and out of Congress, indicate the imperative nature of the problem. It is also well to remember, in connection with this, that the Allison amendment, which now regulates silver coinage, was never intended to be anything but a temporary regulation. At the time it was passed the project of international coinage was under consideration, and it was hoped that independent control would quickly give way to international treaty; the advocates of this scheme, however, failed to achieve their purpose, and the question now presents itself, What shall be the independent policy of this nation?

As a suggestion for the possible solution of this problem, Mr. I. W. Sylvester, of the United States Assay Office in this city, has prepared the text of a bill, to which he invites the attention of Congress, having for its purpose the use of bullion certificates as currency. In his own words, this bill is "a proposition to issue certificates against deposited bullion; to make gold bars legal tender; to issue certificates for weights of metal equivalent in value to ordinary gold coins; to make bars of silver legal tender at their market value, and to issue silver certificates for amounts of silver bullion approximately equivalent in value to gold." The plan by which this is to be accomplished is extremely simple. Gold and silver bars are to be manufactured at the public mints or assay offices and a stamp placed upon them to evidence their weight and fineness. The national government is

then to provide convenient centers at which these certified bars are to be accepted on deposit, and in return for them the depositor is to receive a certificate which will be legal tender in payment of debts. There is, however, to be this distinction between silver and gold certificates: gold is regarded as the metal to which all prices are graded, and is to be legal tender according to the quantity of fine gold deposited. Since the certificates are to be in the denomination of dollars no inconvenience in their use will arise. Silver, on the other hand, is accounted an inferior metal, and the certificates issued upon it are to be legal tender only to the extent of their market value computed in gold. In order to obviate the manifest objection that there will arise disputes as to what the paying power of silver at any time may be, the project further provides that the Secretary of the Treasury shall upon each business day ascertain the relative value of gold and silver at the New York market, and that the ratio thus declared shall be the legal ratio for the day following.

Such, in brief, is the plan for providing a safe and convenient currency. So far as gold is concerned, it is practically the adoption of the English rule of note issues, and, with regard to both metals, it is somewhat akin to a plan offered in France a few years ago, by M. Garnier, for the remodeling of the French coinage. Objections to it in this country may be expected from the extreme advocates of the monometallic and bimetallic systems respectively. The former will deny that silver ought to be given any paying power whatever, while the latter will decry the discrimination made against their favorite metal. Now to both of these extremists three facts may be presented that ought to influence their action upon this question. First, the condition of our monetary system is such that something must be decided upon respecting it before many sessions of Congress shall have expired, and the longer this decision shall be deferred the greater will the difficulty become. Second, public sentiment is a fact of which legislation must take account, and in the presence of strongly-marked conflicting sentiments it frequently occurs that judicious compromise is all that either party can hope or expect. To one who holds that the money laws in political economy are independent of a nation's sentiment as expressed in its legislative enactments, this is foolishness; but to hold such an opinion is evidence of the error of reasoning from premises without an appeal to facts. But, in the third place, the monometallist should be reminded that the use of bullion certificates will not disturb the actual relation existing between the two metals at the present time in the least. Restricted coinage of one metal, even though both metals are legal tender at fixed rates, is practical monometallism until the inferior metal is coined in sufficient amount to satisfy the entire money demand. The United States is to-day upon the gold basis, notwithstanding the fact that silver is a legal tender to unlimited amounts, as will be evident to any one when he recognizes that the price of whatever he buys upon the market is the gold and not the silver price. The use of both gold and silver certificates, under the conditions of the proposed bill, will have no tendency to change this fact. On the other hand, the actual employment of silver as a paying medium will probably be increased. Under the present laws the circulation of silver is a failure and must remain a failure, if for no other reason than that its actual use is attendant with such great inconvenience. This obstacle to its use would be entirely set aside by its employment as deposited security for a paper circulation. The plan proposed by Mr. Sylvester would at least test the question, with no possibility of loss, either public or private, whether the people of this country do or do not desire silver as a part of their circulation. Among obvious advantages of the plan are: that it would tend to clear up in the minds of people the true nature of money; that it would save the expense of continual recoinage, and would also serve as a rational basis for further invitation to other nations for the establishment of monetary treatics.

HENRY C. ADAMS.

Ann Arbor, Mich., February 3.

RICHMOND OPINION ON THE SILVER QUESTION.

To the Editor of BRADSTREET'S.

SIR—The Coinage Committee of the House of Representatives have decided to report a bill providing for the payment of interest on United States bonds in silver. Is not this repudiation to the extent of 18 per cent.?

Economic questions are difficult to master; but I so construe this measure. As I understand it, this interest is due in sound money, whereas this silver money is really worth but 82c. to the dollar. The people have refused to receive these silver dollars; they lie idle in the Treasury, yet the government continues to coin them, and thus undertakes to force them into circulation. If this policy is continued violent fluctuations in all values must ensue, ending only in a commercial panic. The question is, how much of this depreciated currency our country in its vigor can stand, and how long, under the present policy, it will take to inject enough poison in our monetary system to produce the calamitous results that are inevitable? When this fiat money is sufficiently forced on the country all values must enhance to an extent equal to the depreciation of the circulating medium, and thus, as the value of money is inversely as to the value of other commodities, the purchasing power of this silver must correspondingly diminish, entailing an equivalent of loss upon its holders. This will be followed by speculation; and, high prices arbitrarily established here, Europe will pour in the products of her industry, imports will swell, exports diminish, the balance of trade be turned against us to a dangerous point, and this balance will have to be paid for in gold to its absorption. Thus a premium of 18 per cent., for a time at least, would be created on foreign products as compared to our own, since they would reap the higher price in gold, whereas the 82c. silver dollar would remain here a monument to American folly. This may or may not be a long way off; but, unquestionably, the present policy is an active force in that direction. Economical laws partake of the character of physical truths, and no country can violate them with impunity. I have not discussed this question from a moral standpoint. It is easy to prove the dishonesty of the measure. Respectfully,

L. E. G., Jr.

Richmond, Va., February 7.

THE COST OF THE CENSUS.

To the Editor of BRADSTREET'S.

SIR—Much has been said—ignorantly and foolishly said—as to the cost of the census. There has been much misapprehension, and more misstatement, concerning it. The cost of the enumeration of 1870 was nine mills per capita; the expense of this, so far, exceeds that sum by a minute fraction of a cent; and yet the scope of the work is greater by 100 per cent. In agriculture, the schedules of 1870 numbered 52; in 1880, 104, and further was added special investigations in forestry, cotton, the cereals, orchard fruits, sheep husbandry, tobacco and hops. There never has been so much work done, in proportion to cost, in any former census, and it has never been done so well. There never have been such careful inspections of returns, tests of accuracy, or revisions of work. The corrections and reënumerations in cotton changed the result 2 per cent., which varied about a hundredth part of 1 per cent. from the commercial record of the cotton movement.

Gen. Walker has been roundly abused for asking for so small an appropriation as $3,000,000, when the census of 1870 cost half a million more. His shoulders are broad, and he accepts kindly the punishment, without hinting the fact, in extenuation, that more than half the blame should rest upon Congress itself. How and why? Walker's original bill, on which was based the estimate, was changed in several provisions, between its introduction and final passage, which added perhaps a half million to the cost. And many have seriously doubted that these provisions added the value of a dollar to the work. Then the bill was delayed, and afterward the confirmations of supervisors were delayed in the Senate for weeks, and even months, in wrangling over the personnel or the politics of the appointees, so that excessive haste, by relays of clerks working night and day in the distribution of the schedules, made mistakes which caused inevitable expense in correcting. On June 1, when every enumerator should commence his work, fully equipped and instructed, many had not been appointed for want of a supervisor to set them in the field.

The same delay precipitated the sudden assembling of a thousand clerks, with little time for careful selection, at the urgent solicitation of some hundreds of congressmen, officials of all grades, and influential citizens. Yet in the handling of this crude mass there was more of business sense and true civil-service reform, in assignment of work and promotion for merit, than I have seen elsewhere in twenty years' experience in official life.

I do not hesitate to say, therefore, that the work has not been costly, and that it requires no apology, and also that Congress, responsible in part for the excess of cost above the first appropriation, cannot afford to give much heed to ignorant or thoughtless clamor.

J. R. D.

Washington, February 4.

LEGAL NOTES.

The important question, what are and what are not "inspection laws," within the meaning of the constitution was much considered in two cases decided in the Supreme Court of the United States on the 5th inst. One of these, that of The People of the State of New York, plaintiffs in error, vs. The Compagnie Générale Transatlantique, was a suit brought by the state of New York against the steamship company to recover certain money alleged to be due the state by virtue of a statute thereof passed in 1881, and providing in substance that the master, owner, agent or assignee of every vessel carrying alien passengers from a foreign port to the port of New York, should, within twenty-four hours after the entry of such vessel, pay to the chamberlain of the city of New York one dollar for each and every such passenger. As is well known, laws of this nature had been declared unconstitutional by the Supreme Court in the celebrated "Passenger Cases," and in other instances still more recent. But the state authorities based their contention on the ground that the law in question was intended to be, and in its title was expressly stated to be, in aid of the inspection laws of the state, and their position was supposed to derive support from an earlier statute of the state providing "for the inspection of alien emigrants and their effects." This act directed the Commissioners of Emigration to "inspect the persons and effects of all persons arriving by vessel at the port of New York from any foreign country as far as may be necessary to ascertain who among them are habitual criminals, or pauper lunatics, idiots or imbeciles," etc. These laws, it was argued, were inspection laws within the meaning of the Constitution of the United States. But calling statutes inspection laws does not necessarily render them enactments of that character. The court commented upon the fact that the points involved had in effect been decided before, and passed on to a consideration of the nature of inspection laws. Justice Miller, who delivered the opinion, said that what laws might be properly classed as inspection laws must be determined largely by the nature of the inspection laws of the state at the time the Constitution was framed, and declared that neither at the time of the formation of the Constitution, nor since, has any inspection law included anything but personal property as a subject of its operation, nor has it ever been held by any competent judicial authority that the words "imports" or "exports" are used in the Constitution as applicable to free human beings. Nothing, the court continued, can be exported from one country or imported into another that is not in some sense property. This word cannot apply to a free man, and therefore free human beings are not imports or exports within the meaning of the Constitution. The court also remarked that the object of the New York enactments went far beyond any correct view of the purpose of an inspection law. An inspection it declared to be something which can be done by looking at, or weighing, or measuring the thing to be inspected, or by applying to it at once some crucial test. Many matters mentioned in the law under discussion were incapable of ascertainment by inspection in this sense. For instance, how was the guilt of a criminal to be ascertained by inspection, and how could such laws properly contemplate the custody, support and treatment of diseased persons and the retransport of criminals. The court added that these statutes differed from those heretofore held void only in that they were called inspection laws in their caption, and in that provision was made for the payment of a possible surplus to the United States. The decision of the Circuit Court declaring the law in question unconstitutional was affirmed.

The constitutionality of certain provisions of the laws of Maryland relating to tobacco inspection was in question in the case of Turner, plaintiff in error, vs. The State of Maryland. The laws under discussion provided that no tobacco raised in the state should be carried out of the state in hogsheads, except in hogsheads which should have been inspected, passed and marked agreeably to the laws of the state, under certain penalties, but also provided that nothing contained in the acts should be construed to prohibit growers or purchasers of tobacco who might pack the same in the county or neighborhood where grown, from exporting or carrying such tobacco out of the state without having the same opened for inspection; that such tobacco so carried out without inspection should be marked in full with the name and residence of the owner, and should be liable to the same charge of outage and storage as in other cases. The Supreme Court, by Blatchford, J., affirming the decision of the Maryland Court of Appeals declaring the laws constitutional, held that the charge of outage referred to above was an inspection duty within the meaning of the Constitution; that dispensing with an opening for an inspection of the hogsheads mentioned in the proviso did not, in view of the other provisions of the tobacco inspection laws of Maryland, deprive those statutes of the character of inspection laws; that it was not foreign to the character of an inspection law to require every hogshead of tobacco to be brought to a state tobacco warehouse; that the law in controversy was not a regulation of commerce, or unconstitutional as discriminating between the state buyer and manufacturer of leaf tobacco and the purchaser who bought for the purpose of transporting the tobacco to another state or to a foreign country, or a discrimination between different classes of exporters of tobacco; and, that the charge for outage was a charge for services properly rendered.

The question to what extent exceptions in a bill of lading will exempt a carrier from liability for loss occurring by reason of causes specified in the list of exceptions was before the English Court of Appeal, in the case of the Chartered Mercantile Bank of India, London and China vs. The Netherlands India Steam Navigation Company, decided January 17. The plaintiffs sued the defendants for damages for the loss of goods shipped in the defendants' ship Crown Prince, which was lost in a collision on the high seas with another ship of the defendants, called the Atjeh. It appeared that the latter vessel was mainly in fault in causing the collision, but that the Crown Prince was in some degree to blame. The bill of lading under which the goods were shipped contained conditions exempting the defendants from loss through collision, or negligence of their servants. In the court below the defendants were adjudged liable for the whole of the loss of the goods, but this judgment was reversed in part in the Court of Appeal, where it was held that the terms of the bill of lading exempted the defendants from liability so far as regarded the Crown Prince, the vessel in which the goods were shipped, and that as the rule of the Admiralty Court was that where both ships in collision were to blame each was liable for one-half the loss, the defendants were liable in respect of the Atjeh for one-half of the damage sustained by plaintiffs.

The case of Crawford vs. The West Side Bank, decided by the New York Superior Court, at General Term, on the 5th inst., involved an interesting point concerning the liability of banks for the loss of money deposited with them and paid on altered checks. It appeared that the plaintiff, intending to be absent from the city of New York for some days, made out a check for $700 on Thursday, April 20, 1882, dated it two days ahead, and gave it to his bookkeeper, directing him to draw the money and pay his (Crawford's) employés on the Saturday following, in case he had not by that time returned. On the next day, Friday, the bookkeeper altered the date of the check, presented it at the West Side Bank, obtained the money on it, and absconded. The plaintiff then brought suit against the bank for $700, on the ground that it must bear the loss of the money for having paid it on a forged check. The bank had judgment below, the judge holding that the forgery was not one on which the bank could be held liable for the loss of the money. This judgment was reversed at General Term, it being there held that the bank was liable, for the reason that the date was an essential part of the check, and that it was incumbent upon the bank to discover that it had been changed, and to ascertain why the change was made before paying the money.

The Supreme Court of Tennessee, on Jan. 27, decided the case of Baker *et al.* vs. The Louisville & Nashville Railroad Company, involving the question to what extent railroad companies are responsible for representations made by their agents concerning the carriage of goods, in the absence of special contracts upon the subject matter of the representations. The defendant, it seems, received live stock for shipment with the understanding from its agent that they would reach their destination by a certain time, but no particular contract of that nature was made with the agent. While the cattle were on the way the train was delayed on account of a train being discontinued with which it was to connect, and the stock failed to reach the market on the day expected. The plaintiffs sued the company for the loss arising from the delay. The court held that under the circumstances the railroad company was only bound to ship the stock within a reasonable time, and that the mere understanding with the agent that the connection would be made, and that the stock would get to their destination at the expected time, was not a contract to ship in a specified time.

BUSINESS NOTES.

There were 226 failures in the United Kingdom reported to *Kemp's Mercantile Gazette* for the week ending January 20, against 221 in the preceding week, 247 in the third week of January, 1882, and 269 in that week, 1881. England and Wales had 215 against 224 and 258 respectively in the third weeks of January 1882 and 1881; Scotland 11, against 18 and 7; and Ireland none, as compared with 5 and 4.

There is no improvement to record in the so-called labor market at the leading trade and manufacturing centers in the United States. The suspension of the Union Iron & Steel Company, of Chicago, and the Kansas Rolling Mill, at Kansas City, threw a considerable number of men out of work. The starting-up of two furnaces along the line of the Reading Railroad, however, furnished work for several hundred men who have been idle for some time.

Business at the leading French woolen industries at the middle of January had recorded no special improvement. It will be recalled that, in the report on their condition for January 1, they were stated to be exceedingly depressed. At Elbeuf sales, especially of new goods, have been very moderate. In the north of France the woolen spinners have had to reduce working time to eight hours a day in many mills. A like reduction has been made in the working time at many of the French carpet mills. Four mills report a stagnant trade. The woolen spinners are perhaps the best situated, having thus far enough to do to keep employed twelve hours daily.

The British labor market, as reported by the London *Labour News* of January 24, continues the improvement chronicled during several weeks preceding that date. In Cornwall, however, the stoppage of a number of tin-plate factories has caused much distress among the employés, and a subscription has been started for their relief. The exports to America from Hull are noticeably brisk. The strike of the railway employés on the Caledonia line has interfered with travel and commerce. The *News* adds that owing to the railway strikes in the north the Welch coal trade has received an impetus, and many collieries are hardly able to keep pace with their orders. The shoe trade at Northampton, Stafford and Norwich is more active, and makers are advertised for. A similar report comes from London.

In an article on the subject of the production of coal in the United States, published a few weeks ago, the recent discovery of extensive deposits of anthracite coal in Colorado was alluded to, and some figures relating to the output of that variety in 1882 were furnished. The Trinidad (Col.) *News*, of recent date, announces that the first anthracite coal-breaker in Colorado was started up at Crested Butte a few days ago, and adds that it is "a matter of no small importance to Colorado." In Gunnison county, Col., it is reported that "an abundance of coal of this character is found," but it has hitherto been impossible to bring it into the market "in good shape for want of machinery to prepare it properly." The *News* enthusiastically expects that Colorado will in the future "divide with Pennsylvania the market in this coal."

Varying reports have been heard from all sections of the far west respecting the effect of the recent severe storms on the cattle. Late telegraphic advices from San Antonio, Texas, state that word had been received from a number of points in that state that the loss in sheep was from 15 to 20 per cent. As to losses of cattle no trustworthy figures are at hand. The Wyoming Stock Growers' Association state officially that although the storm has been unusually severe along the line of the Union Pacific Railway, it has been less so on the ranges which lie to the north, and that the cattle in Wyoming are in much better condition than they have been for years. The superintendent of the Yellowstone division of the Union Pacific Railway, after careful inquiry among the Montana ranges, says all the cattle are doing well, and that there have been no losses of stock.

The generation of electricity by means of heat has long been a practically unsolved problem so far as utilitarian results are concerned. A recent foreign exchange, however, notes that Dr. Brand, of La Rochelle, has made an important advance in this direction by means of an electro-generative candle, which yields a current of electricity in the act of burning. This torch or candle is prepared by making a paste of coal dust and molasses, and molding it into a stick, which serves as the inflammable wick of a candle. This rod is then covered with asbestos in a thin sheet, and dipped into fused nitrate of potash until a good thick coating of the nitrate adheres. The wick being ignited it burns away, and a current of electricity is drawn from the candle by wires inserted into the nitrate and the coaly wick. The results obtained of course are not now applicable to any practical purposes, but are important as demonstrating the possibility of electro-generative fuel. It is pointed out that, if one had a fireplace so constructed that on burning any ordinary fuel in it so as to give heat, it would, at the same time, develop an electro current sufficient to ring electric bells or charge an accumulator, and thus give light also.

The following national banks have been organized: The Fultonville National Bank, N. Y.; capital $50,000; John H. Starin president, Lorenzo V. Peck cashier. The Detroit National Bank, Mich.; capital $1,000,000; Henry B. Baldwin president, C. M. Davison cashier. The First National Bank of Central City, Neb.; capital $50,000; Joseph N. Osterlind president. The Third National Bank of Chattanooga, Tenn., has elected D. E. Rees president in place of J. H. Warner. The Delaware County (Ohio) National Bank has elected S. Moore president in place of W. D. Heim. The Potters' National Bank of Liverpool, Ohio, has elected William Brunt president in place of William Brunt, Jr. The First National Bank of Deadwood, Dak., has elected O. J. Salisbury president in place of C. R. Lake. The Farmers' National Bank of Danville, Ky., has elected J. C. Caldwell president in place of T. McRoberts. The Second National Bank of Freeport, Ill., has elected Jacob Krohn president in place of H. W. Hance.

The following figures referring to British blast furnaces have been published abroad:

	1882.	1881.
Number furnaces built	963	968
Number furnaces in blast	575	555

Scotland shows the greatest increase in number of furnaces in blast, 113 out of 148 built in 1882 having been in blast, against 105 at work in 1881—increase of 5 furnaces. In Cleveland there was a decrease of 3 furnaces in the number built in 1882, but 100 were at work against 96 in 1881. There were 5 less furnaces built in East Worcestershire in 1882 than in 1881, but there were 50 in blast in the former year against 46 in the latter. In Glamorganshire 4 more furnaces were in blast last year. The above furnish the whole of the increase of those blowing in 1882. There was a falling off of 4 furnaces in blast in northeastern and northwestern England. Some of the older furnaces now out of blast will never be blown in, as the methods by which they are operated are too expensive to compete with their younger rivals.

The recently-published returns of French imports and exports in 1882 have caused some anxiety among those in France who read their meaning carefully. The values, summarized, are as follows:

	Francs.	
French imports.	1882.	1881.
Food	1,686,860,000	1,690,365,000
Raw materials	2,314,203,000	2,320,694,000
Manufactures	673,503,000	574,702,000
Miscellaneous	297,504,000	277,773,000
Totals	4,972,070,000	4,863,408,000
Increase in 1882	108,662,000	
French exports.		
Food	866,513,000	871,618,000
Raw materials	695,120,000	671,347,000
Manufactures	1,857,499,000	1,836,109,000
Miscellaneous	177,032,000	182,430,000
Totals	3,596,164,000	3,561,504,000
Increase in 1882	34,660,000	

The noteworthy feature of the increased imports is the excess of 98,000,000 francs worth of manufactures. *Le Temps* (Paris) is of the opinion that the French market for domestic manufactures is being narrowed both at home and abroad, and that paper calls on employers and employés for a joint effort to offset the tendency referred to.

The London *Grocer* states that the demand for foreign fresh and preserved meats in the United Kingdom in 1882 remained strong, despite the decreased supply, and much more would undoubtedly have been consumed had it gone into the British market. The falling away in arrivals of "compressed beef" was made good in part by increased receipts from Australia and New Zealand, although, as indicated above, the aggregate supply did not fully meet the demand. It is added that the success attained in shipping fresh meats from the antipodes to England by the refrigerating process promises an abundant supply in the future. The receipts of American life stock were of course much less than in 1881, owing to decreased supplies in the United States and Canada and the higher range of prices on this side. The importations of sheep into the United Kingdom, however, nearly equaled those of 1881, and an expansion is looked for. The following are the British figures of imports of fresh and preserved meats into the United Kingdom in the years named:

	United States, Australia and New Zealand.		*Brazil and S. America, Continent,*	
	cases.	*tons.*	*cases.*	*cases.*
1882	892,521	9,135	36,248	30,886
1881	1,028,980	10,848	41,643	40,451
1880	1,092,909	12,134	12,249	15,306
1879	921,969	13,524	5,234	10,257

There were 81,455 head of cattle imported in 1882, against 144,253 in 1881, and 126,525 head of sheep, against 128,380 in the year preceding.

The British mineral oil trade of 1882 is discussed in the *Oil Trade Review* supplement to the London *Grocer* of January 6. It is pointed out that the British trade in American petroleum has been remarkable chiefly for three things: immense stocks and augmented deliveries, and also for the close approach to low prices, which was only prevented by the contagious nature of the fever of speculation in petroleum which broke out in the United States last fall, and which naturally communicated itself to dealers abroad. About the middle of 1882 the stock of American refined in London was very large, or about 275,000 barrels, against only 47,000 barrels at a like date in 1881, and the value "was lower than ever known before," or 5¼ @ 5½d. per gallon for prompt deliveries to 6⅛ @ 6¼d. for deliveries in the last four months of the year. It appears that London dealers lost confidence in the bull reports from America, in the latter months of 1882, that the supplies of petroleum here were rapidly approaching exhaustion, or that daily consumption was equal to or exceeding production. Prices thereupon declined from the height to which they had risen consequent on the speculation and manipulation of prices here during September and October. London deliveries are said to have been rather moderate until late in 1882, and for that year aggregate 58,000 barrels larger than the clearances in 1881, the heaviest year preceding. The total London imports were likewise in excess of 1881, the difference being 11,000 barrels in favor of 1882. The position of petroleum and petroleum products in London for 1882, with comparative stocks on December 31, are thus given:

Landings.

	1882.	1881.	1880.
Petroleum oil, barrels	610,119	599,260	399,929
" " cases	....	2,093	1,462
Crude petroleum, barrels	19,675	11,850	11,668

Deliveries.

	1882.	1881.	1880.
Petroleum oil, barrels	568,718	510,579	409,304
" " cases	1,623	1,821	824
Crude petroleum, barrels	17,639	9,869	12,099

Stocks.

	1882.	1881.	1880.
Petroleum oil, barrels	218,616	179,471	87,392
" " cases	106	1,850	1,215
Crude petroleum, barrels	7,804	5,804	4,051

The arrivals of petroleum, etc., in the United Kingdom during the twelve months ended December, 1882, were as follows:

Petroleum oil, barrels.

	1882.	1881.	1880.	1879.
London	552,891	600,906	356,927	457,742
Liverpool	254,361	266,636	161,879	195,042
Bristol	109,119	105,182	96,882	96,230
Hull, etc	71,688	90,625	56,165	68,362
Totals	988,059	1,063,409	681,853	817,376

Petroleum spirit, barrels.

	1882.	1881.	1880.	1879.
London	53,837	70,602	67,135	73,082
Liverpool	49,563	34,855	16,958	34,133
Bristol, etc	37,412	30,460	33,620	34,141
Totals	140,812	135,917	117,713	141,356

During the same period the imports of residuum into Liverpool alone were 93,125 barrels, against 60,229 barrels in 1881, 41,572 barrels in 1880, and 83,998 barrels in 1879.

In writing the financial history of the year 1882, the author of the introductory chapter to the supplement to the London *Statist*, at the outset refers specially to the collapse on the Paris Bourse early in the year, which extended throughout France, and which is attributed to a decline of business in France after a season of great prosperity. Another financial hurricane was that on the London Stock Exchange several months later, due to the trouble with Egypt and the possibility of a breach between England and France. The effect of the Paris collapse is believed to have been sedative, and there is now a slow reaction in France against the influence of the past few years. Judged by ordinary tests the commercial year 1882 is believed to have been fairly prosperous, but the writer in the *Statist* feels impelled to characterize it as "rather peculiar," because none of the events he looked for, following a period of great speculation, appeared. While the traffic returns, exports and imports and other commercial reports, indicate a good year's trade, particular attention is called to the gradual but steady decline in values and decrease in quantity of goods handled as well as exported, beginning after the stock exchange troubles referred to and continuing to date. The checked railway construction and pause in material development in the United States are also given as causes of the British commercial decline during the latter part of the year. Owing to this reaction the view is held that the year 1883 opens less promisingly than its predecessors for at least three seasons past.

MR. HEWITT AND THE DUTY ON IRON ORE.

The following is an extract from a letter of Mr. Abram S. Hewitt to Representative Cox, which was read in the House of Representatives on the 6th inst.:

"If there be any man in this country who would be injured by the removal of duty from iron ore or from scrap iron, I am that man. I am very largely engaged in mining iron ore in various parts of the United States, but more particularly in New Jersey, where I am interested in mines of magnetic iron ore nearer to the seaboard than any other in the country. I am, therefore, more directly in competition with foreign iron ore than any one else, and the removal of the duty would injure me if it would injure anybody; but the fact is that no foreign iron ore is sold here at less than $6 a ton, while I am selling my ore, equally rich, for $4 per ton. The removal of the duty will not, therefore, affect the price of my ore, as there is a margin of $2 per ton in my favor now, and if ore be made free I shall still have a margin of $1.50 a ton. The reason why foreign ore comes in is because we do not produce enough ore low in phosphorus for the manufacture of pig iron required for the Bessemer steel process. Last year, because the country did not produce this ore and did not produce enough Bessemer pig, we imported over 600,000 tons of foreign ore and nearly an equal quantity of foreign pig iron. If the ore had been free the pig iron which we imported would have been manufactured here out of foreign ore, which would have given a large additional opening for American labor, and would not have reduced the output of American ore one ton. It is plain, therefore, that free ore would be a benefit to the whole country, as well as to the iron industry in which I am engaged.

"So in regard to scrap iron. Its free introduction is opposed on the ground that it will interfere with the manufacture of pig iron. If this be so I would be greatly injured, as I am a large producer of pig iron; but, as a matter of fact, cheap scrap and pig iron are friends, and not enemies. They can be most advantageously and cheaply worked in combination with each other, and the cheaper the scrap can be had the better price the buyer can afford to pay for pig iron, and the larger will be the demand when the business has adjusted itself to the more favorable conditions thus produced. I am aware that the ironmasters as a body do not agree with me in my views; but they and the gentlemen who represent them in Congress are making a mistake. They think that we are suffering from foreign competition, whereas the depression in the iron business is due solely to domestic competition. Localities in which iron cannot be made cheaply are yielding to the superior advantages of other regions in this country where the conditions of production are more favorable. No addition to the tariff can prevent this competition or interfere with the inevitable result of driving inferior concerns out of existence. The process is disagreeable, but it is necessary and healthy. The duties on iron ore and scrap iron are unnecessary impediments to the cheapening of the cost of iron, and they should be at once abolished.

"The people understand that the iron business cannot exist in this country with wages at their present level without countervailing duties sufficient to make up for the difference in the wages paid here and abroad. But they will object to the imposition of duties which are simply prohibitory and which have no effect whatever in putting up the wages of labor, but simply add to the cost of iron to the consumer and produce a loss to the community for which there is no compensation whatever. I therefore urge upon the representatives of the iron interests on the floor of the House not to seek to raise duties, but diligently to find out every item which can be made free, or upon which duty may be reduced, without injury to the business, and not be deceived by the outcry which proceeds from ironmasters who have works located in unfavorable positions, and whose final extinction from domestic competition is only a question of time. I have had to abandon such works myself, and I expect to abandon more of them, and I should be ashamed as an ironmaster and as a representative to ask the people of this country to indemnify me against my folly or against the inevitable and healthy progress of the age."

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

The stock market this week has been witness to a process of liquidation which at times threatened to run into a small panic, and again to desperate struggles on the part of the operators who were selling out to stem the downward course of prices and strengthen the market upon which they had to unload. The struggle has been rather aptly compared to the retreat of an expeditionary force pursued by the light troops of the enemy, against whom the retreating party has now and again to make a determined stand to prevent retreat from degenerating into wild rout. The retreating party is the combination of "reformed bears" who started out at the opening of the year to work up a "January boom." The pursuing forces are the miscellaneous crowd of "unreformed" big and little bears. The events of the past week may be said to have demonstrated the utter failure of the attempt referred to. It is now only a question with the members of the late combination how much of loss each shall escape with; for if the market were turned now, and prices put back to a higher level than they were when the movement was begun, yet the bull operators would lose heavily, for they have had to sell a very heavy proportion of their holdings at figures much below what the stocks cost them. It was said before that a combination to direct the market which included in it neither Mr. Gould nor Mr. Keene was something unusual in Wall street, and not promising of a successful outcome. The event has justified the doubts entertained by many observers from the start. Mr. Gould seems, in his usual Mephistophilean style, to have aided the combination in loading up with stocks; that is, he sold them all he had to part with at the lower prices, laughing quietly at the expected result and talking mysteriously of the favorable state of affairs for working up a bull market. That he has been just as active as Mr. Keene in breaking down prices and compelling the combination to unload, every one in Wall street knows. It is his heavy hand which broke down Union Pacific and spread terror thereby through the street. Whispers have begun to be heard of revenge long delayed having at last been had on Mr. Belden, who was so heavily loaded with this stock, which he bought from about 115 up to 130. It is said that Mr. Gould sent a message to him through a third party, and the conjectures are many as to what was its tenor.

The first bad break in the bull movement was originally made by the Union Pacific, when about two weeks ago it dropped back suddenly from 104¾ to 103, while the rest of the market was dancing up in the liveliest way, and next day it had another decline. This called a halt; and soon after came a tumble in Denver, so bad as to throw everything into confusion. There was a long fight over this stock, but though in the end the price recovered, the strain of putting it back seemed to weaken the bull combination most dangerously. They had to buy so much that it crippled them considerably. This week the whole force of the bear operators was thrown against Union Pacific, and it went down under the assault in the most alarming style. The closing price of the stock last Friday was 97⅜, and this was thought to be extraordinarily low—a rock-bottom price. On Wednesday it had fallen to 91, dropping 3 per cent. that day. To make matters worse, there has been a serious and quite inexplicable decline in Chicago, Burlington & Quincy, which is one of the solid investment stocks, and, like Union Pacific, a favorite with the Boston people. It really appeared that there was serious trouble over there from some cause. Parenthetically, we may say here that the statement alluded to last week, of the wish of the Boston stockholders in Union Pacific to "remove the stock from the demoralizing influences of Wall street," was misunderstood. It appears it was not meant that it should be taken off the New York Stock Exchange, but that the control of the property should be transferred to Boston by electing a board of directors composed mainly of Boston stockholders. This is a horse of another color. In the opinion of people well qualified to speak on such a question, this scheme is a good one. There is too much stock manipulation in the Union Pacific management to satisfy conservative investors. Nevertheless, Boston ought to be able to take care of its favorite C., B. & Q., which just now seems to be getting in a bad way here. That stock has been nearly all held over there.

Wednesday was the bluest day of the week for the bulls. The market rallied a little at the close, Union Pacific reacting from its abysmal price to 92⅝; but the rally did not appear to promise much improvement. However, there was one stock which resisted all the efforts of the bears to depress it, and its strength on Thursday caused a general improvement of prices. This was Lake Shore. It has been made plain to all by the events of the past few days that most of the "market stock" of this company, that is the stock not locked up in the safes of permanent investors, is held by a few men. Who they are is not publicly known. Some say it is the Vanderbilt boys; others declare that they have only light holdings. Be this as it may, the men who are long of it "called in" all their stock; and when their holdings were taken out of the loan market, it created such a scarcity that a premium was bid for the use of the stock to make deliveries. Some sellers could not borrow, and the stock was bought in under the rule for their account by the brokers to whom they had sold it. Of course the effect of this was to advance the price about two per cent.; the small shorts were compelled to cover their sales, and, a general alarm being spread that the same tactics would be employed in other stocks, there was a very general closing out of short contracts on Thursday, whereby the whole market was considerably stiffened, and Union Pacific bounded up to 94½. Such expedients as these are necessarily only temporary in their effects. "Calling in" stock is one of the recognized stratagems for forcing the covering of short sales, but it can be effective only where the amount called in is sufficiently large to create a scarcity of the stock in the loan market. That a stock like Lake Shore, $150,000,000 in amount, should be held in such heavy blocks as it is now discovered to be was a slight surprise to the street. It is not considered to be a recommendation for its purchase by outsiders. The holders have bought not to keep, but to sell at a profit; and there is no knowing when they may have to sell anyway, profit or no profit. As a piece of strategy, however, for holding up the market and scaring off the increasing crowd of small bears, it was good, and for the time most effective. An incident of the week deserves mention for its novelty. The Canadian Pacific Company, which recently listed its stock here, took a good way to get it into the hands of investors. Instead of attempting to sell it on the market in the usual way, for which the times are unpropitious, the company advertised ten millions of it for sale at 60, opening subscriptions in London, Amsterdam, Montreal and New York. The subscriptions were closed on Wednesday, and the amount sold was nearly nine millions, which, considering the state of the stock markets at this time, is more than could be expected. Amsterdam was the largest buyer.

The supply of loanable funds is as large as ever, and the rate on call loans this week has averaged 3½ per cent. on stock collateral. On government bonds the rate is lower. The banks are not likely to run low while trade is dull, and the stock market is declining, thereby reducing the demands for loans. The exchange market indicates considerable trading between this city and Europe in our securities, but it is entirely speculative, and mostly done by the arbitrageurs, who scalp fractional profits on the daily differences between New York and European quotations for the same stocks. Posted rates are $4.83 and $4.87. Actual rates yesterday were $4.82¾ @ $4.83 and $4.86 @ $4.86¼.

There has been but slight activity in the government bond market this week. The following were the closing quotations yesterday:

	Feb. 2, bid.	Feb. 9, bid.	Feb. 9, asked.
U. S. 4s extended (3½ p. c.)	103¾	103	..
U. S. 6½s 1891, registered	112½	112½	112¾
U. S. coupon	113⅜	113½	113⅝
U. S. 4s 1907, registered	119¼	119⅜	119⅝
U. S. 4s 1907, coupon	119⅛	119⅜	119⅝

The bank statement of Saturday showed a loss in the surplus reserve of $2,332,500, leaving it at $7,840,050, but this is $1,458,225 more than was held by the banks at the same time last year. The following are the comparative totals of the statements of January 27 and February 3:

	January 27.	February 3.	Differences.	
Loans	$316,905,400	$316,460,800	Dec.	$444,600
Specie	63,937,700	61,605,200	Dec.	2,332,500
Legal-tenders	23,351,400	23,030,400	Dec.	321,000
Deposits	309,126,100	307,182,200	Dec.	1,943,900
Circulation	10,985,800	16,645,200	Dec.	340,600

The proportion of total reserve to liabilities is now 27.55 per cent., as against 27.02 per cent. at the corresponding date of 1882.

The following extract relating to the income of the railroads of the country is taken from an interesting digest of the census report on railroads appearing in the *Railroad Gazette:* "The gross earnings of the railroads of the United States were $580,450,594, or $6,688 per mile of road; the working expenses were 60¾ per cent. of this amount, or $4,065 per mile, and the net earnings $2,623."

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

The commercial situation in the United States, as reported by telegraph to BRADSTREET'S, gives evidence of improvement during the week. At business centers rates of interest have been tending downward, which suggests increased activity. Wheat has advanced between 2c. and 3c. per bushel as the result of a variety of causes, viz.: the continued strength of the foreign markets, the reports of damage to the winter wheat in Indiana, Illinois and Missouri, and the decrease in the arrivals at the principal western points. Corn has advanced about 1c. per bushel in response to the higher prices in foreign markets. Provisions are slightly higher on account of the decrease last week in arrivals of hogs at the west, but, on the whole, prices are not generally changed. The iron market generally is weaker. Pig is lower, concessions having been made in recent sales. Quotations are unchanged, but it is likely that contracts could be made at New York for No. 1 foundry at $24.50@$25, which is fully 50c. under current rates. Bar is weaker and lower also. Tank is a little firmer, but no sales of moment are noted. Steel rails are also lower, offers having been made to deliver large lots at tide-water for $40. This means the lowest net price yet noted. Coal is quiet. Rates are cut by many outside operators, and there is no prospect for improvement for some weeks to come. Petroleum is higher and firmer. This is directly due to reports that the gushing wells on Cooper tract in Forest county are not now doing over 1,400 barrels daily, against 4,500 barrels daily when at the maximum. Ocean charters have been freer for petroleum and grain, but chartering rates for the week have been only spasmodically easier. The exports of petroleum, in equivalent of crude, from January 1 to February 3, are over 4,000,000 gallons in excess of the corresponding period in 1881. The wool trade is active, and the market is decidedly firmer, with an upward tendency on desirable clothing and all long staple fleeces, which are in small supply. There were 256 failures in the United States reported during the past week—20 less than the preceding week, 97 more than the corresponding week of 1882, and 106 more than the same week of 1881.

BREADSTUFFS.

The foreign markets for breadstuffs have again advanced since last week in consequence of the advance in American markets, which are just now the controlling markets of the world because a greater part than usual of the world's surplus is here. In the present situation in Europe there is a certainty that next summer all European countries will be more dependent on foreign wheat than ever before. The prospect for crops there does not improve; on the contrary, each report makes the condition in the United Kingdom more unfavorable, while on the continent there has been no material improvement. In England the weather has not only been too wet to enable farmers to make any progress in wheat sowing, but it has prevented threshing. At least, this is the cause assigned for the falling off in farmers' deliveries. For the week to January 14 the total deliveries in the 150 market towns of England were only 32,388 quarters, which were 31¾ per cent. less than in the corresponding week of last year, whereas, if the estimate of 10,000,000 quarters for the crop of 1882 is to be sustained, the farmers' deliveries in the 150 towns would require to be at the average rate of 37 per cent. over last year. Advices from Mannheim, Germany, up to January 18, say that "the firm feeling which had characterized the wheat market had become more pronounced." "There appears to exist a confident feeling that prices may improve, but cannot possibly decline at present nor scarcely during the coming spring." According to the last official reports Germany continues to import wheat largely. In November the imports were 493,408 quintals (220 pounds) and the exports were 106,296 quintals, and of flour the net imports were 101,180 quintals. In all cases these figures were more than double those of the corresponding time last year, the total net imports of wheat and flour in the eleven months to November 31 being 2,441,000 quarters against 1,386,500 quarters in the corresponding period of last year.

The exports of wheat from India continue to be on a very moderate scale.

It was understood in England until within the past few weeks that a large stock of wheat had accumulated at Odessa, which would, of course, come forward as soon as navigation was resumed in the spring. The official report, however, of the stock of wheat in store at Odessa on December 31 has come forward, and shows the total to be 873,656 quarters, against 847,296 on December 31, 1881, and 538,400 on the corresponding date of 1880. This showed considerably less accumulation at present than was generally believed it would.

The net imports of wheat and flour into France for the eleven months to November 30, 1882, were equal to 49,261,523 bushels, against 48,000,413 in the same time in 1881. This rate of imports is still maintained, as is shown by the fact that the imports in the week to January 2, were 1,344,000 bushels of wheat alone.

The situation in California at the end of January is given as follows in a private circular: "The Produce Exchange estimates of stock is 242,000 short tons for export, against tonnage capacity in port; 165,000 short tons, to arrive in thirty days; 45,000 short tons, to arrive thereafter up to July 1, 1883; 190,000 short tons, from which it will be seen that any material improvement is precluded until next harvest. The conditions are so far favorable to a large crop in 1883. Early and abundant fall rains enabled a large acreage to be sown. Winter rains, while not up to expectations, have not admitted of any loud complaints from farming districts, and with a moderate quantity during the coming month, and an average for the spring months, a large yield will be secure."

AMERICAN WHEAT MARKETS.

The wheat markets both in New York and Chicago have been excited, and fluctuated widely during the week, but, on the whole, had advanced only about 2c. per bushel on all options in the week to Thursday, 8th. The exciting causes have been, first, the reports of damage to the winter wheat in Indiana, Illinois, Missouri and Kansas, caused by the storms, and particularly by sleet. These rumors caused an advance of from 2c. to 2½c. per bushel in Chicago. The correctness of these reports have since been denied by parties who have traversed the districts in which the damage was said to have been done, and the advance would not have been maintained had it not been for the large decrease in the arrivals at the principal western points. The total receipts at St. Louis, Chicago, Milwaukee, Detroit, Toledo, Indianapolis and Peoria, in the week to February 7, were only 487,891 bushels as against 574,018 bushels of arrivals at the same points, without St. Louis, in the week to January 26. As compared with the average in December the arrivals at these western points are only about one-third as much now as they were then. To a considerable extent this diminished movement from farmers' hands has been due to the snowstorms and the consequent obstruction of traffic in the northwest. But it is more largely due to the indisposition of the farmers to sell at present prices. As mentioned in the statement of the foreign situation, the advance on this side has caused an advance there, but it would not affect the foreign markets so promptly if the situation in Europe were not in favor of higher prices regardless of the advance here. During the next year Europe will be more dependent than usual upon the United States for the necessary supply of foreign breadstuffs, and the foreign markets will follow the American more closely.

The visible supply of wheat in the United States and Canada, on February 3, showed an increase of 380,318 bushels, as compared with the previous week.

CORN.

Corn had advanced an average of 1½c. per bushel in the week to Thursday. This was partly in sympathy with the advance in wheat, but more largely on account of the continued foreign demand and the advance in the foreign markets. The arrivals of corn at the principal western points, St. Louis, Chicago, Milwaukee, Toledo, Indianapolis and Peoria, for the week to February 7, were 1,765,900 bushels against 1,154,755 at the same points, without St. Louis, in the week to January 26, and 1,278,280 at the same latter points in the week to January 19. The change in the volume of arrivals at these principal western points has, therefore, been slight. But there is a continued active legitimate demand for the corn, not only for consumption in the eastern state markets, but abroad, and the firmness of the price has disappointed even the parties in Chicago who cornered it for January. It is believed that when they started into the January deal they did not intend to attempt a perfect corner in that month. At least they showed their lack of faith in the prices to which they advanced it for January by selling largely at the same time for February; and it is reported from Chicago that they have persistently stayed on the bear side of the market, and had been selling until the present week, in which they have been trying to cover their shorts. Notwithstanding their efforts to depress it, the prices of all options for corn were over 1c. per bushel higher on February 8 than on February 1, and nearly 8c. per bushel higher than on January 1. The general feeling throughout the west seems to be that if we had anything like so large a crop of corn in 1882 as estimated by the Agricultural Department the demand for it has increased in proportion. The stock in store at Chicago continues light, being 3,794,000 bushels on February 3, against 5,919,000 on the corresponding date of 1882, when the crop of 1881 was acknowledged to be short.

The general manager of the Chicago, Burlington & Quincy says that there are 1,800 cars of corn side-tracked at various points on that road on account of the storms, and it is estimated that on other Chicago roads there are at least 1,200 cars more, making a total of from 1,000,000 to 1,500,000 bushels of corn that have been storm-stayed in the past week between Chicago and Missouri river points.

On Friday the markets for corn were a fraction lower in New York but a fraction higher in Chicago, and 1d. per cental higher in Liverpool.

The visible supply of corn in the United States on February 3, as compared with a week previous, was increased 1,150,154 bushels.

PROVISIONS.

The course of the provision market has been to some extent governed by the daily receipts of hogs at Chicago, as will be seen by the following daily prices of pork at Chicago, as compared with the daily receipts of hogs since January 27, viz.:

	Receipts of hogs.	*Price of Feb. pork.*
January 27	22,237	$17.42½
January 28	27,237	17.25
January 29	23,554	17.35
January 30	22,298	17.47
January 31	25,177	17.72½
February 1	18,799	17.87½
February 2	19,743	18.02½
February 3	20,827	18.20
February 5	10,847	18.17½
February 6	12,665	18.25
February 7	33,790	18.05
February 8	25,611	17.97½
February 9	25,725	17.90

Taking the price of February pork as the index of the market, it shows an extreme range of a dollar per barrel, which is not large. The decrease in arrivals of hogs at Chicago to the minimum on February 5 was understood to be due to the delay of trains on the railways on account of storms, and was not viewed as any index of a changed condition of the provision market generally. The general condition of the market remains substantially as reported last week, viz., that the receipts of hogs are increasing as compared to the corresponding time of last year. The aggregate receipts at Chicago, Cincinnati, St. Louis, Kansas City, Peoria and Indianapolis in the week ending February 8 were 190,679, against 254,000 in the previous week, and 238,133 in the corresponding week of 1882. The decrease in the week to February 8, as compared with the preceding week, was largely due to the obstructions by storms before referred to, and therefore should not be accepted as a change in the movement until the effects of that temporary cause have been overcome. The decrease in those few days at Chicago alone was nearly equal to the decrease of arrivals at all the points for the week. Nevertheless, the stocks of provisions in store everywhere are still light, and prices in the foreign markets show the same upward tendency for provisions that they do for breadstuffs. These are sufficient reasons for the maintenance of comparatively high prices.

THE PROVISION MARKETS BY TELEGRAPH.

From Cincinnati, Ohio: Provisions are a trifle easier, though no change in prices is quotable.

From Chicago, Ill.: Pork held steady; holders not offering, and bears inclined to wait developments regarding supply of hogs; estimated receipts for week, 128,000; same last year, 137,000; predictions of a large increase next week if weather is good. Lard shade firmer; active demand; foreign shippers are the largest buyers for future. Meats firmer; liberal foreign reports by packers who report property sold on other side.

From St. Louis, Mo.: Most of the week provisions have been very active and advancing, but are now quieter. Cattle in good supply, but a little dull. Hog receipts quite light on a brisk market.

From Wilmington, N. C.: Provisions active at full figures.

From New Orleans, La.: Provisions are firm and slighty higher.

From Memphis, Tenn.: Hog products are firm, with an upward tendency.

From Nashville, Tenn.: Provisions firm with an upward tendency. Cattle receipts moderate; demand good; prices steady.

THE NEW YORK DRY GOODS MARKET.

The good trade developed last week in the New York dry goods market has not continued according to expectation. There is a class of croakers who never do have good business, just as, on the other hand, there is a set who, to believe what they say, are constantly coining money. The opinions of such worthies leaves one in doubt whether the trade is really good or bad. Those whom we consult, however—the shrewd and constant observers of the tone of the market—say that trade is undeniably dull this past week, though it showed an improving tendency towards the close. Last week trade was good and this week was looked forward to as likely to be better; the falling off is therefore felt all the more. Expectations not realized always cause disappointment. It is not at all expected, however, that trade is going to be dull for the entire season. On the contrary, a very fair volume of business is expected. Buyers are only acting cautiously, and if purchases are not as large as usual it will probably be found that they will be more constant as the season advances. The marketings of imported goods for the past week show an increase of $1,000,000 over the previous week, which no doubt importers thought would be necessary to meet the requirements they expected. Next week will probably show a falling off. The importations and marketings are as follows:

	No. of packages.	*Value.*
Total imports of dry goods during past week	9,086	$3,411,427
Total amount of dry goods, duty paid, for past week	11,942	3,506,404

THE BRITISH COTTON GOODS MARKET.

[By Cable to BRADSTREET'S.]

London, February 9.—Manchester goods show a fair trade, at low prices, with all principal markets. Home trade slack.

THE DRY GOODS MARKETS BY TELEGRAPH.

From Portland, Me.: The dry goods trade continues quiet and sluggish.

From Boston, Mass.: The dry goods jobbers report a fair trade for the week, and some report an increase so far over last year's business. Commission houses report even a better trade than the jobbers. Woolen goods are quiet. Collections are good, and the outlook all that can be reasonably expected.

From Providence, R. I.: The print cloth market is very firm, the sales being light; 64s are quoted at 3¾c.x1 per cent., and 56x60s at 3¼c. The stock on hand is about the same as last week. The cotton market is steady, the amount of sales being moderate; middling uplands are quoted at 10⅝c., and middling gulfs at 10⅞c.; there are about 5,000 or 6,000 bales on hand.

From Philadelphia, Pa.: There is a better feeling in this market. Jobbers' sales are increasing and agents are getting fair orders for spring goods and booking some business in heavy woolens for future delivery. Leading brands of staple cottons are firmer. Woolen goods are opening at low prices as compared with last year. The storms and transportation difficulties in the west retard trade to some extent, but the general demand is improving and the outlook is favorable.

From Pittsburgh, Pa.: The dry goods market continues quiet, and some houses report collections a little slow.

From Cincinnati, Ohio: There has been but little change in the condition of the dry goods trade.

From Cleveland, Ohio: The dry goods trade is fairly active, and, though a little backward in spring demand, compares favorably with other years.

From Columbus, Ohio: Trade in dry goods still only fairly active, but as good as anticipated, although merchants are disposed to buy cautiously. Some complaints are heard regarding collections.

From Chicago, Ill.: Dry goods selling fairly to south and southwest; no demand from northern sections.

From Peoria, Ill.: In dry goods trade is good, with prospects of a good trade during the month, as country dealers in this vicinity are but lightly stocked.

From Detroit, Mich.: In dry goods volume of business has been light and only to keep up assortment.

From St. Louis, Mo.: The dry goods trade quiet, especially on orders from the southwest. Prices steady and firm.

From Burlington, Iowa: Dry goods movement confined to staples and notions, but satisfactory for the season.

From St. Paul, Minn.: Dry goods quiet; prices steady. Country retailers have a light trade, though cold weather has facilitated working off winter fabrics. The aggregate sales since January 1, despite blizzards, equal in value last year's for the same period. Traveling agents delayed by bad roads; their orders are light.

From Minneapolis, Minn.: Dry goods dealers report very light sales, but are now receiving their early spring stocks, and, as soon as communication with the country is opened, anticipate an active demand for goods.

From Omaha, Neb.: Dry goods rates are still light, but said to be slightly more active.

From San Francisco, Cal.: The dry goods trade has undergone no material change, but preparations are being made for an active spring trade.

From Baltimore, Md.: The sales in the dry goods trade the past week were fair, and the prospects for an improvement in this branch of business in the near future are thought to be good. Collections are also a little better.

From Richmond, Va.: The dry goods trade shows considerable improvement over last week.

From Norfolk, Va.: Trade generally not active; weather yet unsettled. Dry goods jobbers filling some orders from travelers.

From Wilmington, N. C.: The dry goods jobbing and retail trade is firmer, and more business doing.

From New Orleans, La.: The influx of Mardi Gras visitors has stimulated the week's movement in dry goods.

From Memphis, Tenn.: There is a decided improvement in the dry goods business this week, and collections continue good.

From Nashville, Tenn.: Dry goods jobbers are making active preparations for the spring trade.

COTTON.

The total receipts of cotton at all the ports since September 1, are 4,485,216 bales, which is an increase of 663,008 bales over the receipts of last year for the same time. The total at each port since September 1, is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	620,617	359,542
New Orleans	1,217,189	1,021,280
Mobile	268,963	221,446
Savannah	667,595	637,835
Charleston	479,559	431,552
Wilmington	107,494	120,297
Norfolk	603,425	491,019
Baltimore	39,664	23,116
New York	112,130	132,346
Boston	118,369	151,540
Philadelphia	44,607	37,589
Other ports	210,008	211,955

The receipts at the ports for the week were 163,577 bales, against 169,054 last week and 86,744 for the corresponding week last year.

The receipts at the twenty-four interior towns usually reported were 54,647 bales, against 60,056 bales last week and 24,963 bales for the corresponding week last year. The shipments for the week were 62,990 bales, against 68,140 bales last week and 34,855 bales for the corresponding week last year. The stocks for the week were 394,351 bales, against 319,990 last week and 350,220 for the same week last year. The New York cotton market has been higher for spot middling uplands, the price having advanced to 10¼c. The sales for the week have been for export 98 bales, and for consumption 610 bales, making a total of 708 bales; included in the above are 200 bales to arrive. Below will be found the closing quotations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
Ordinary	7 9-16c.	7½c.	9 1-16c.
Strict ordinary	8	7 15-16	9⅝
Good ordinary	8 13-16	8¼	10 7-16
Low middling	9¾	9 11-16	11 5-16
Middling	10¾	10 3-16	11¾
Good middling	10 9 16	10½	12⅛
Middling fair	11 5-16	11¼	12⅝
Fair	12 1-16	12	13⅝

The New York market for spot cotton closed quiet and steady.

The New York future market has been higher, the price having advanced an average of 14 points for near months and 15 points for later months. The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
February	10.28c.	10.15c.	11.67c.
March	10.39	10.24	11.78
April	10.53	10.38	11.96
May	10.67	10.52	12.13
June	10.81	10.66	12.30
July	10.94	10.79	12.43
August	11.05	10.90	12.54
September	10.73	10.62	12.09

The New York future market closed steady.

The Liverpool market for spot cotton has been firm, and prices have remained unchanged for middling uplands and for middling Orleans.

The sales for the week at Liverpool were 72,000 bales (of which 44,000 were American), against 60,000 bales (of which 45,000 were American) last year. The stock in port is 862,000 bales (of which 604,000 are American), against 655,000 bales (of which 473,000 were American) last year. The total imports for the week was 103,000 bales (of which 76,000 were American), against 92,000 bales (of which 73,000 were American) last year, and the amount afloat 340,000 bales (of which 275,000 were American), against 366,000 bales (of which 232,000 were American) last year.

The Liverpool future market has been quiet. Below will be found the closing quotations at Liverpool on Friday of middling uplands for delivery.

	To-day.	*Last week.*	*Last year.*
February	5 47-64d.	5 38-64d.	6 30-64d.
February–March	5 46-64	5 38-64	6 30-64
March—April	5 48-64	5 40-64	6 34-64
April—May	5 53-64	5 43-64	6 38-64
May—June	5 53-64	5 47-64	6 40-64
June—July	5 57-64	5 51-64	6 44-64
July—August	5 61-64	5 56-64	6 48-64

The Manchester market has been firm.

COTTON REPORTS BY TELEGRAPH.

From Columbus, Miss.: The weather since last report has been wet, disagreeable and unfavorable for planters' work. Cotton receipts are good for the week.

From Wilmington, N. C.: The weather has been changeable. Cotton receipts are increasing, and the market is firm, with a steady demand.

From Helena, Ark.: There has been three days of favorable weather. The remnant of crops is worthless.

WOOL.

There has been a more active inquiry for wool in all the seaboard markets during the past week, and the situation at the close is decidedly stronger all around. Combing wools are especially wanted, and some choice lots have brought 1@2c. advance. Holders' views are generally 1@2c. higher on fine and medium clothing fleeces, and stronger for all descriptions of unwashed wools. The rising tendency of prices is due to the growing scarcity of desirable clothing and long staple wools. Supplies have been much reduced in all markets, and, as there is no stock of foreign of any moment to fall back upon, both manufacturers and dealers are beginning to anticipate a shortage in the supply of certain grades before clip time. Upward of 120,000,000 pounds were imported in the fiscal year 1879–80, and so much of it was sold at a loss that importations since that time have been comparatively insignificant. Meantime these foreign stocks, which for two or three years past have served to make up for the deficiency in the domestic clip, have been gradually exhausted, and as consumers' requirements are in excess of the home output, it is evident that all the wool now available will be wanted at fair prices. The London sales of colonial wools will open about the close of this month, and if prices are not unduly advanced by the competition it is likely that some American orders will go abroad. The favorable position of the eastern markets has encouraged a stronger holding of the unsold wools in the interior, and sellers are now very indifferent. Texas and similar wools, on which holders have been unable in many cases to realize cost for some time past, are selling more freely, and show an improving tendency in common with the general market.

NEW YORK CITY TOBACCO TRADE.

The market for western leaf during January was quiet, sales having reached about 2,000 hogsheads. Of these 1,600 were for export. Prices were unchanged, holders evincing much firmness in their views, consequent upon the small salable stock on hand here. The stock of old goods is almost exhausted, while new leaf is coming to this market slowly by reason of the unfavorable weather.

In seed leaf there was some slight improvement, which was brought about by holders accepting lower prices than they had previously asked for their goods. The sales were about 2,000 cases, of which nearly 1,000 cases were 1880 Ohio, at 6 to 7½c. The prevailing cold weather and the high prices asked by growers are preventing extensive operations in the 1882 crop. The majority of sales that have been made in the country thus far have been at lower prices than prevailed in former years.

Trade in Sumatra and Havana tobaccos was fairly active, with prices well maintained.

In the cigar trade there was great complaint of dullness, but the inactivity was but little greater than that which marked business during January, 1882. Tax was paid on 50,046,000 cigars, 30,578,000 cigarettes and 406,045 pounds of chewing and smoking tobacco and snuff, against, in January, 1882, 53,963,000 cigars, 25,531,000 cigarettes and 429,983 pounds of chewing and smoking tobacco and snuff.

IRON.

No improvement has been recorded in the general iron market during the past week. Various leading members of the trade in different lines do not talk encouragingly. While the two houses of Congress continue so wide apart in their views as to the metal schedule of tariff duties the outlook for a conclusion of tariff agitation is, of course, unfavorable. The continuance of uncertainty as to the outcome is the principal cause of the existing depression. A special session of Congress during the summer means a prolongation of the situation. No final action on the tariff until after the opening of the next session in December next might permit a revival of business in the meantime—but will bring with it the certainty of a recurrence of the evils complained of. The prospect for the iron trade during the year, therefore, according to the views put forth by members of the trade themselves, is anything but encouraging. This version of the situation, however, on consideration appears too one-sided. Iron will be required during the year and in large quantities. It will therefore be sold and must be manufactured. The conclusion is therefore forced that the situation is colored a little too darkly by those immediately interested. The market for American pig continues quiet and comparatively dull. The season for making the year's contracts is close at hand, but it is possible that it may be delayed to await the adjournment of Congress. The nominal price for No. 1 pig at New York is $25@25.50, but it is probable that contracts could be made at $24.50@$25. A few sales have been made at Philadelphia during the week at concessions to buyers, and the market may therefore be declared slightly weaker, with but little business doing. Scotch remains about as last week. The arrivals amounted to about 1,200 tons, of which about half went into store. One lot of Glengarnock was sold at $22, a low price, probably for special reasons making that figure preferable to storing. The sales were about 600 or 700 tons, a part to arrive. The market abroad is somewhat weaker. American bar iron is weaker; ordinary is quoted at 2.1@2.2c., and refined bar at 2.25@2.35c. There is but little demand. Tank is firmer, and there has been some in request of late. Steel rails are again weaker. A few small contracts have been taken. One offer is learned of for $40 at tide water.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, February 9.—Iron very flat. Makers and merchants accept less for pig. Finished iron averages 2s. down. Exports in railroad sorts for January to the United States were 21,000 tons less, but total exports show an increase of 10,000 tons.

DOMESTIC IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: The general situation and outlook, from a local standpoint, have not materially changed. Trade is quiet in nearly all departments, and there is a good deal of irregularity in prices, owing to tariff uncertainties; but with the settlement of this vexed question it is generally believed that a brisk business is in prospect.

From Pittsburgh, Pa.: The iron trade shows no improvement since last week, and continues very dull. A number of mills have been compelled to shut down owing to encroachments of high water in the rivers.

From Cincinnati, Ohio: There has been but little change in the state of the iron trade.

From Cleveland, Ohio: The iron market continues dull, sluggish and unsatisfactory, differing little, if any, from its condition for the last quarter. The delayed legislation regarding the tariff schedule adds to the general unsettled condition of the trade. Beyond purchases for immediate consumption there is comparatively little doing.

From Chicago, Ill.: Hardware, metals, tinners' stock, bar-plate, pig-irons, and nails dull. Stocks ample.

From Detroit, Mich.: The iron market has been unsettled; demand light, prices low.

From St. Louis, Mo.: The demand for heavy hardware and manufactured iron is greater than at this time last year. Inquiry for foundry grades of pig iron is improving. No material change in price.

COAL.

In coal circles business continues quiet. Considerable coal has been shipped down the Ohio river. The half-time arrangement at the anthracite mines goes into force once more. Prices are, except on contracts, largely on private terms among individual operators. The schedules exist, but are of little force at present. There is little to report respecting either the bituminous or anthracite markets at present. The weekly output of anthracite for the first four weeks of the new year, with comparisons, has been as follows:

	1883, *tons.*	1882, *tons.*
Week ending January 6	422,875	374,998
Week ending January 13	585,243	594,829
Week ending January 20	366,486	391,129
Week ending January 27	398,556	321,814
Total for January	1,723,160	1,682,770

—or a gain in the output this year to January 27 of 90,390 tons.

PETROLEUM.

Very few evidences of disturbing influences in the speculative petroleum market have been visible during the past week. There have been several rumors flying about as to this or that new well, but the severe decline in the production of recently completed "gushers" has counted out all probable new-comers in Forest county as bearing on the market quotations. The market sagged off a little on Saturday. Trading was fairly active. The price at the opening was $1.02; the highest paid was ¼c. better; the lowest was at the close, when $1.01 was bid. On Monday the various petroleum speculative markets were very dull. The only news received of importance was that the new wells were falling away seriously as to production. The opening sale was made at $1.01⅛, which was the lowest price paid during the day. The highest was $1.02⅛. At the close $1.01⅜ was bid. On Tuesday the market had, apparently, recovered a fairly satisfactory bull tone and transactions were numerous, the advance in prices as compared with those of the evening preceding being 3¼c. The revival of strength in values was attributed to reports that three new wells had come in dry. Prices opened at $1.02, the lowest was $1.01⅞, the highest $1.04⅞, and at the close $1.04⅝ was bid and ⅛c. more asked. Wednesday developed no new features; prices were fairly well sustained and a brisk business was transacted. The opening price was $1.05, which was the highest point touched. The lowest figure was the price bid at the close, $1.03¾, a drop of 1¼c. on the day. Thursday there was less animation and fewer sales were made. The situation appeared to belong to that variety wherein everyone is waiting to see what will happen next. Oil sold at the outset at $1.04, and dropped to $1.03⅛. The highest was $1.03¾, and the closing price was $1.03⅜ bid, a loss of ⅝c. on the day.

The market was firmer on Friday. It opened at $1.03¾ in the morning, and advanced under reliable reports of the steady decline in the total daily production of the Cooper tract in Forrest county, where the new gushers are located. The afternoon session opened with $1.04⅜ bid for certificates and a continuance of the morning's firmness. The daily production of the Cooper tract is now placed at but 1,400 barrels, against about 4,500 barrels daily when at the maximum. The closing price last evening was $1.04@$1.04⅛, against $1.02¼ bid last week Friday at the close, an advance of 2¼c. on the week.

The market for refined petroleum has been dull during the week, although full quotations have been maintained. The demand for cases has been more active. Crude has been in light request. The closing prices of certificates of crude petroleum and of petroleum products last evening, as compared with those of Friday, February 2, were as follows:

	February 2.	*February 9.*
Certificates of crude	1.02¼bid	$1.04@1.04⅛
Refined petroleum, 110°	7¾	7¾
Refined petroleum, 70°	7⅞	7⅞
Crude, in barrels,	7@7½	7 @ 7½
Case oil, plain brands	10½	10½
Naphtha	6¾	6¾

The increase in the total quantity of petroleum (crude equivalent) exported from the United States

since January 1, reported to January 27, was further augmented during the succeeding seven days. From January 1 to February 3 the total quantity shipped abroad was 47,915,571 gallons, against 43,829,791 gallons in a like period of 1882, an increased exportation in favor of 1883 of 4,885,780 gallons against an increase of 3,327,397 reported one week previously. For the week ending February 3, the shipments were 12,011,819 gallons, against 10,499,054 gallons in the preceding week. New York city's exports of petroleum from January 1 to February 3, amounted to 42,239,741 gallons (leaving but a little or 5,500,000 gallons for all other ports), against 33,268,857 gallons in a like period in 1882. The gain in shipments from New York in five weeks of the new year therefore was 8,970,854 gallons. The following table shows how the exports from the United States of petroleum and petroleum products (in crude equivalent) have progressed thus far during the year.

Exports from United States	1883.	1882.
Week ending January 6	6,099,349	5,858,289
Week ending January 13	9,639,427	13,120,406
Week ending January 20	9,665,922	5,674,342
Week ending January 27	10,499,051	7,923,308
Week ending February 3	12,011,819	10,453,456
Totals to February 3	47,915,571	43,029,791

Some interesting statistics and computations as to petroleum were published in a late issue of *Stowell's Reporter*. That journal places the total production of crude for 1882 at 30,053,500 barrels. The export trade took 15,281,507 barrels (crude equivalent) and the home trade 6,895,085 barrels. The remainder, 7,876,908 barrels, was added to the stocks in tank. The daily average production for the year was 82,303 barrels; daily average exports, 41,867; daily average home trade, 18,856; daily average increase in stocks, 21,580. The daily average production for December is placed at 61,210 barrels. By taking the average demand of last year, Stowell makes it appear that the overproduction is now but 487 barrels a day.

OCEAN FREIGHTS.

There has been a noteworthy call for tonnage for petroleum since last report. On Saturday last a number of grain charters were disposed of at concessions on previous rates for future arrivals. A number of petroleum vessels were also secured at less than they were previously obtainable for. Later during the past week some quite reasonable petroleum charters were secured. This points to a continuance of the very heavy shipments of petroleum. For several days of late, however, charters have been very dull, the two reactions referred to being in favor of oil and grain. Freights in the berth have been in good demand for merchandise, grain and provisions, and rates have been at fair figures in most cases.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: There has been a slight improvement in the grocery business. Fish in fair demand. Lumber operations prosperous. No change in discount.

From Boston, Mass.: The boot and shoe trade continues quiet, perhaps a shade better than last week. Buyers have not increased, and many of the larger jobbers who have arrived are here mainly to hurry up the manufacturers on previous orders. Shipments for the week to places outside of New England, 57,473 cases, against 53,727 cases the sixth week in 1882. Total shipments since January 1, 279,891 cases, against 241,637 cases same time last year.

MIDDLE STATES.

From Philadelphia, Pa.: Trade in some lines is more active, but the general movement continues quiet. The stormy weather and floods in the west have checked receipts of wool, grain and general produce, and have delayed demand for many kinds of manufactured goods for distribution in the interior. Export trade is increasing in volume, and the outlook is favorable for greater activity next month. About fifteen steamers and a number of sailing vessels have been chartered to arrive to load grain, and are now on their way to this port. This movement in ocean freights is largely speculative, in anticipation of a good export demand during March and April, which now seems probable, as foreign markets are steadily following the advance on this side, and orders are more frequent both for wheat and corn, though as yet mostly under sellers' views. The upward tendency of grain values has stimulated more active trading on speculative account. Petroleum is dull. Wool is active and advancing, but there is very little doing in cotton. Provisions are in good demand and generally higher. Farm products are in lighter supply and firmer, with a good general demand. Dairy produce rules dull.

From Pittsburgh, Pa.: Trade generally is inactive, and recent floods have interfered materially with shipments.

WESTERN STATES.

From Cincinnati, Ohio: The continued rise in the Ohio river has produced a depressing effect in several lines of trade. The receipts of grain and produce are small. The distribution of manufactures and merchandise is restricted by the damage to the transportation lines, and the attention of not a few of our merchants being given to the protection rather than to the sale of their goods. Grain is nominally unchanged, while flour is quiet. Whisky and cotton are without change. Little speculation prevails. Business at banks quiet. The only notable event is the rumor that a new bank will soon be started.

From Cleveland Ohio: The general merchandise markets are in fair shape, although the volume of business being done is not as large as at this time a year ago, and the spring trade, it is thought, will be nearly a month later than usual, except in some special line. There is an active demand for money, yet no special complaint is noticeable as regards country collections. The damage and loss on Sunday last in the lumber and manufacturing district, caused by the overflow of the Cuyahoga river, which runs through it, was large, in a few instances entire stocks of lumber being swept away and lost, while machinery in many manufacturing concerns on the flats suffered severely by the flood. The rains and flood were general throughout the northern portion of the state, and the losses to property lying along the streams are reported very heavy.

From Columbus, Ohio: Buggy manufacturers commencing to work full force. Groceries quoted quiet the past week, and trade, as a whole, up to the general average, while some report considerable of an increase over last year at this time.

From Toledo, Ohio: Trade unusually good for the season, the continued cold weather making a demand for heavy goods. Collections fair.

From Evansville, Ind.: Trade during the past week has been generally dull. The stagnation of the whisky trade at Owensboro, Ky., where it is said some 75,000 to 100,000 barrels are in bond, causes a sympathetic stringency in other lines throughout the Kentucky counties upon which a great deal of our trade is dependent. The weather has been cold and rainy; the Ohio is booming and the prospect is for a big overflow. A large lot of corn in the bottom lands is in danger of destruction.

From Indianapolis, Ind.: Trade is still quiet and not much doing. Collections are somewhat slow. The weather has been very unsatisfactory, being cold and stormy; the floods in the streams are doing much damage to property, and interrupting travel and trade. Business will be quiet until the weather improves; however, a good spring trade is anticipated. The price of wheat has been stronger, a fact which, it is thought, will increase the movement of the same. Banks are well supplied with funds.

From Chicago, Ill.: Drugs slow. Staple groceries selling fairly. Sugars scarce; firm. Coffee firm. Stocks fair. Salt fish good demand; scarce. Lumber quiet; demand slow. Wheat dull, less local speculation and outside orders; shrewd operators show disposition to hold off. Corn very dull; no pressure to sell; buyers holding off; shippers say it is impossible to forward property; nearly all cars loaded past week; side tracked in suburbs.

From Peoria, Ill.: The severe storms through this section have to a certain extent affected trade, but not materially, having only inconvenienced the shipping facilities.

From St. Louis, Mo.: General trade has suffered from the severe weather and difficult transportation, but is otherwise in good condition. Leaf tobacco is improving, and the old stock is greatly reduced. Exporters are taking cotton here again, and receipts and shipments are both heavy. All grains in small receipt. Wheat and corn have been advancing and very active, but the market is unsettled now. Horses and mules are in large receipt and excellent demand, with tendency upward.

From Detroit, Mich.: Business of the week has been generally light, though there is some improvement noted in collections. Considerable complaint from the interior on account of heavy snow, impassible roads and consequent blockade of railroads in some quarters.

From Grand Rapids, Mich.: General trade is a little more brisk than last week, although collections are reported slow. Money is in good demand.

From Burlington, Iowa: City trade and general country business has been better than for the corresponding time last year. Jobbers report no great demand as yet; country orders very conservative, but satisfactory; collections fair, and interests unchanged.

From Milwaukee, Wis.: The general business of the city is only fair, and jobbers have many of their travelers at home awaiting more steady weather and clearer sailing, having experienced no little trouble by extreme cold and heavy snowstorms. Collections are of course only fair, and local banks report business quiet, though demand for loans is unabated.

From Minneapolis, Minn.: Rail and country roads have been so blocked by snow for two weeks that trade has been at nearly a standstill, especially in all departments of jobbing. Collections have been only moderate, as little produce has been moving. Reports from northern Minnesota and Dakota indicate a large increase in the acreage planted to wheat the coming season. The crop of 1882 has been mainly marketed. It is estimated generally that not over one-fourth to one-third is still back. It is generally conceded that there is not enough to keep the mills supplied until the next crop comes in. Receipts of wheat are light, and market firm at $1.10@$1.12 for No. 1 hard. Shipments of flour for the month of January were 374,500 barrels; market firm at $6.50@$7 for good to choice fancy. There is more demand for lumber, and were the railroads open trade would be active. Money market easier, but the demand is fully up to the supply.

From St. Paul, Minn.: Banking is very dull. There is an increased supply of loanable funds, and the demand is light. General merchandise is quiet. In boots and shoes there is nothing doing. Hardware is dull. Lumber slow and weak. Drugs and groceries moderate sales. Rail receipts and shipments have increased lately.

From Omaha, Neb.: Milder weather has served to make trade somewhat better, and merchants are as a rule very hopeful respecting an early spring trade. The bulk of last year's crop is still in the state, and is sure to move with an early spring.

CALIFORNIA.

From San Francisco, Cal.: Wheat and flour strong, at higher prices. Barley advancing, with speculative demand. Light rain and snow since last report. More rain wanted in southern counties, but condition of crop generally favorable. Most lines of business are dull, owing to present dry weather and Chinese New Year. Quicksilver advanced in consequence of proposed duty. The grocery trade is fairly active.

SOUTHERN STATES.

From Baltimore, Md.: There has been a slight improvement noticeable in general business the past week, and the spring trade appears to be gradually opening. The movement in grain was animated, and has stimulated the flour market, in which there are tendencies for higher prices. Western wheat advanced ½c. late in the week, and the market has a strong bearing. Southern and western corn were firm, and prices higher. Transactions in coffee have been active on the basis of 8¾ @9c. for fair; holders are very firm in their views. Buyers of cotton are taking hold sparingly, and the market is rather dull; about 100 bales recently sold at 9¾ @ 9⅞c. The recent advance in grain has checked the demand for ocean charters, and the freight market is quoted dull and rates nominal. Money continues in good demand.

From Richmond, Va.: The weather has been more favorable, and considerable improvement in general business is noted. Orders are increasing, and merchants hopeful.

From Norfolk, Va.: Wholesale groceries fairly active. Cotton coming in moderately. Collections are small. Health of city good.

From Wilmington, N. C.: Grain and breadstuffs active at full figures. Naval stores steady; demand fair. Timber continues scarce; lumber and shingles firm. Freights, foreign firm; coastwise nothing doing.

From Savannah, Ga.: The weather continues heavy and has a depressing effect on trade, which has not improved since last report. Collections reported slow.

From Columbus, Miss.: The roads are in bad condition and trade is only moderate.

From New Orleans, La.: Sugar ruled fairly active and firm. Molasses has dragged. Under a good demand flour is firm and slightly higher. Money continues easy. Stocks remain strong, owing to the union of old and new gas companies; former sold at 86½c., and is now twenty-five points higher than last week. Proposed old and new ice companies have improved; stock firmer. Consols and premiums have been without material change. The influx of Mardi Gras visitors has stimulated the week's movement in hardware, groceries, fancy goods, notions, etc.

From Memphis, Tenn.: Everything in the way of supplies has stiffened in value, except hay. Corn scarce and in demand at higher prices. Potatoes tending upwards, and all arrivals find ready takers at full figures.

From Nashville, Tenn.: Trade for the week quiet and steady, but little doing. Flour firm, with a tendency to higher prices. Wheat firm and higher. Corn steady and in good demand. Country produce steady; demand active; receipts light. Banks report business dull.

TRADE EMBARRASSMENTS.

There were 256 failures in the United States reported to BRADSTREET'S during the past week, 20 less than the preceding week, 97 more than the corresponding week of 1882, and 105 more than the same week of 1881. Compared with the previous week, the middle states had 45, an increase of 1; New England states 26, a decrease of 20; southern states 75, an increase of 3; western states 92, an increase of 8; Pacific states and territories 18, a decrease of 12; Canada and the provinces 34, a decrease of 12. The failures were mainly of the average trader, the important ones being those of Ferry & Brother, lumber, Grand Haven, Mich.; Pelton, Pomeroy & Cross, pianos, Chicago; Sumner, Reed, Williams & Co., wholesale cloths, and Richard Salembier, laces, New York city; J. B. Carprew, wholesale dry goods, Norfolk, Va. In the principal trades they were as follows: General traders 65; grocers 30; dry goods 18; shoes 17; liquors 17; drugs 10; hotels and restaurants 8; tobacco and cigars 7; hardware 7; millers 6; manufacturers 6; jewelers 4; furniture 3; produce and provisions 2; commission 2.

ALABAMA.

PICKENSVILLE.—F. P. Ezelle & Brothers, general store, have assigned.

ARKANSAS.

EUREKA SPRINGS.—B. B. McAdams & Co., drugs, have failed. Liabilities about $1,500; assets about $1,000.

FALL RIVER.—J. H. Earle, hats and caps, owes about $9,000; actual assets $7,500.

NATICK.—F. Donovan & Co., florists, have suspended.

NATICK.—John Sweeney, grocer, who recently failed, owes $1,900; nominal assets $1,700.

NEW BEDFORD.—The estate of S. G. Nye, grocer, is reported offering to compromise at 75 cents. His estate inventoried $7,615; liabilities $7,159.

NEWBURYPORT.—C. N. Ballou & Son, clothing, have failed, and offer to compromise at 30 cents. Liabilities $5,650; actual assets about $2,000. They offer 30 cents.

NEWTON.—Asa P. Doane, fish, is offering 25 cents.

PITTSFIELD.—The troubles of McEnany & Cooney, liquors, recently attached, are said to be due to differences between the partners. The assets are said to equal the liabilities.

SALEM.—A. J. Philbrick, manufacturer of bicycle boats, is reported to have failed, and offers 15 cents. Liabilities about $5,000.

SPENCER.—The liabilities of W. F. Comins, grocer, are reported at about $5,700; nominal assets $4,300.

WARE.—At a meeting of creditors of Joseph E. Lawton, clothing, the statement showed liabilities $15,045; nominal assets $15,202. A committee was appointed.

WEBSTER.—George D. Bates, shoes, offers 25 cents.

WEST MEDWAY.—Elbridge G. Ware, grocer, is reported to have failed. Liabilities $2,500; assets small.

WORCESTER.—Michael B. Walsh, grocer, has been attached.

MICHIGAN.

CLIO.—Wilson & Depper, grocers, are reported to have been closed by the sheriff.

CRYSTAL FALLS.—Leopold & Co., general store, have assigned.

DETROIT.—A. J. Kastner, tailor, has assigned to A. R. Metcalf. Liabilities $1,505; actual assets about $1,700.

EVART.—J. F. Mann, saloon, has been closed up under chattel mortgage.

GRAND HAVEN.—The embarrassment of Ferry & Brother, lumber manufacturers, causes no little excitement in financial and political circles, Senator T. W. Ferry, senior member of the firm, being a prominent candidate for re-election. They are interested individually and as a firm in several different concerns, among which are The Michigan Barge Company, a corporation which claims a paid in capital of $200,000; The Ottawa Iron Works Company of Ferrysburg, of which T. W. Ferry is principal partner, and S. H. Lasley & Co., general store, Montague, of which E. P. Ferry is the company. Paper made by these firms, with the indorsement of Ferry & Brother, has gone to protest frequently of late, and holders have pressed for additional security, which in many instances has been given, especially to the largest creditors. This security is in the shape of a combined chattel and real estate mortgage of $50,000 on The Ottawa Iron Works Company, a bill of sale of logs and property in Michigan, and a transfer of their Chicago yard and lumber, which property was valued at $250,000. Besides the above securities, collaterals in the shape of barge company and mining company's stocks have been turned over. Attachments have been levied upon the firm's property at Grand Haven. Ferry & Brother decline making a statement of their financial condition until after the senatorial election, so that extent of liabilities is merely a matter of conjecture. It is thought from present indications that the figures will reach $500,000. The firm were owners of valuable property, which has pretty generally been turned over to creditors. They are known to have invested largely in Utah silver mines for several years past, and this, together with inattention to business resulting from the deadlock in the senatorial election, is believed to have precipitated the trouble.

GRAND RAPIDS.—A. R. Brewer, dry goods, gave a chattel mortgage for $2,041, and assigned.

GRAND RAPIDS.—J. Fitzgerald & Co., dry goods, have been closed on a chattel mortgage. Liabilities estimated at $30,000; assets $20,000.

GRAND RAPIDS.—D. B. Van Buren, druggist, has been closed up by attachment on a claim of $450.

HARBOR SPRINGS.—The stock of F. Thayer, grocer, has been taken by mortgagee.

IRON MOUNTAIN.—W. E. McClintock, general store, has been attached.

JACKSON.—H. H. Case, grocer, has given chattel mortgages for $3,000 and a bill of sale of his entire stock.

PONTIAC.—James T. Barbour, agent, marble, is reported to have left town, and his father has taken possession of the stock.

SAULT STE. MARIE.—N. Bradley & Son, grocers and bakers, have assigned.

YPSILANTI.—G. L. Foerster, tobacco and cigars, is reported to have left town, and the stock taken by mortgagees. Liabilities about $3,200; nominal assets $1,600, on which the chattel mortgages are $1,500.

MINNESOTA.

BRAINERD.—F. W. Krause, shoes, has been closed out by creditors.

ST. PAUL.—Schefers Brothers, tailors, have assigned.

MISSISSIPPI.

BROOKHAVEN.—J. M. Meek, general store, has assigned. Liabilities $4,900.

BURN CITY.—Gidden & McRae, general store, who recently sold out, have been attached.

GREENVILLE.—J. Heidensfelder, general store, has assigned.

LOUISVILLE.—H. Herrman & Co., general store, have sold out and been attached.

MERIDIAN.—William Pappenheimer, furniture, has failed and sold out. Liabilities about $6,000.

MISSOURI.

KANSAS CITY.—Johnson, Reed & Co., wholesale grocers, have failed, and the stock is in possession of a trustee.

KIRKSVILLE.—Aaron Solkey, clothing, has turned over his stock to two of his preferred creditors, and has been attached by others.

MALDEN.—Tatum & Bragg, general store, have assigned.

MEMPHIS.—S. L. Evans, dry goods and clothing, has sold the bulk of his stocks and been attached.

MOBERLY.—O. F. Chandler, groceries and brickyard, has assigned.

RICH HILL.—A. M. Carpenter, saloon, gave a chattel mortgage for $2,500, and is reported to have assigned.

ST. JOSEPH.—The liabilities of Kuechle & Greiner, brewers, who recently sold out to John D. Huber & Co., their indorsers, are reported at $52,000.

ST. LOUIS.—Louis Peters, furs, has assigned to William E. Fisse. The stock is valued at $2,500.

ST. LOUIS.—The Windsor Hotel Company has been sold out under a deed of trust.

MONTANA.

BILLINGS.—Silverberg & Peaslee, liquors, are reported in the hands of the sheriff.

NEBRASKA.

BLAIR.—J. H. Richards, grocer, has failed. Liabilities about $1,500; actual assets $300.

JUNIATA.—W. E. Searing, livery, is reported to have left town. Liabilities $500. He was covered by a chattel mortgage.

NEBRASKA CITY.—C. A. Simon, shoes, has assigned. He recently succeeded Simon & Drain.

NORTH LOUP.—M. S. Rolls & Co., hardware, have sold out to a creditor.

NORTH LOUP.—S. C. Terry, general store, has been attached. Liabilities $1,100; actual assets about $200; preferred claims $600.

OMAHA.—Jacob Netzer, gents' furnishing goods, has failed.

OMAHA.—Agatha Spoerrie, restaurant, has closed up.

STEELE CITY.—Charles Dagney, drugs, has failed.

WYMORE.—J. B. Lininger, general store, has assigned.

NEVADA.

RENO.—Manning & Berry, general store, sold out to D. B. Boyd and Henry Berry for $35,000, the invoiced value of the stock, and assigned their book accounts to the First National Bank of Reno.

WELLINGTON.—Z. Pierce, general store, has failed.

NEW HAMPSHIRE.

DOVER.—E. T. Trafitter, dry goods, has been attached by his father.

GORHAM.—F. C. Stevens, grocer, has failed.

NEW JERSEY.

BORDENTOWN.—E. B. Hancock, agricultural implements, has called a meeting of creditors.

JERSEY CITY.—Daniel Donovan, saloon, is advertised to be sold out by the sheriff.

MOORESTOWN.—Richard Crean, shoes, who recently failed, owes about $500; actual assets $215. He has moved away.

TUCKERTON.—Jesse C. Ridgway, general store, has failed.

NEW YORK.

ALBANY.—The Ransom Stove Works offer to compromise at 20 cents—5 cents in sixty days, 15 cents unsecured notes long time.

BROOKLYN.—William Maupai, brewer, asks an extension of six months. The liabilities are reported at $38,000.

CANANDAIGUA.—The schedules of Culver, Fisher & Co., dry goods, show liabilities $7,898; actual assets about $4,300.

CONSTABLEVILLE.—R. S. Miller, groceries and liquors, has assigned.

CORNWALL.—E. P. Roe, nursery, who recently assigned, owes about $18,000; actual assets $8,000.

CORNWALL.—The liabilities of J. G. Roe, hotel, who recently assigned, are reported at $34,000, and the actual assets about $1,000.

FRANKLINVILLE.—F. M. Metcalf, meat market, has failed.

HUDSON.—Whitbeck & Power, iron bridge builders, have assigned to Frederick Jessup, giving preferences for $5,000. Liabilities about $16,000, which they expect to reduce to $9,000 by the transfer of some contracts; this, however, is not assured; assets about $3,000, in material. They attribute the failure to losses on a contract with the Catskill Mountain Railroad Company.

LITTLE FALLS.—C. B. Townsend, grocer, has assigned.

LUDLOWVILLE.—Nelson E. Lyon, general store, has assigned.

MIDDLE GROVE.—J. W. Waite & Son, hotel, have been closed by the sheriff. Liabilities about $5,000.

NEW YORK CITY.—At a meeting of the creditors of M. Armstrong & Son, leather and findings, the statement showed liabilities $363,000; real assets about one-third of that amount. The firm made no offer, but the creditors present concurred in a proposition to accept 33 1-3 cents.

NEW YORK CITY.—Matthew Bruce, furniture, has been placed in the hands of S. B. Hamburger, as receiver, on the application of the Chicago Furniture Workers' Association. His liabilities are about $7,000.

NEW YORK CITY.—The schedules of John J. Conner, shoes, show liabilities $13,351; nominal assets $7,052; actual assets $5,348.

NEW YORK CITY.—The schedules of Charles DeRouge, liquors, show liabilities $4,213; actual assets $3,454.

NEW YORK CITY.—The schedules of Louis Greenbaum, manufacturer of cigars, show liabilities $4,483; actual assets $2,986.

NEW YORK CITY.—The schedules of Sarah L. James, hats, show liabilities $5,755; nominal assets $1,766; actual assets $170.

NEW YORK CITY.—Richard Salembier, importer of laces, assigned on the 3d inst. to Paul D. Lavigne, giving preferences to P. D. Lavigne $4,500; Wilmerding, Hoguet & Co. $10,101; A. Richard $4,250; L. Rheims $1,020; M. Belgium $1,010; total $20,881.

NEW YORK CITY.—The schedules of William R. Smith, hardware notions, show liabilities $1,254; nominal assets $1,139; actual assets $590.

NEW YORK CITY.—J. Stebel, butcher, has been placed in the hands of a receiver in supplementary proceedings.

NEW YORK CITY.—Sumner, Reed, Williams & Co., wholesale cloths, assigned on the 9th inst. to A. Richmond Hunt, giving preferences to John S. McClure $4,422; John H. McClure $3,836; N. E. Mead & Son $1,933; James Adair $2,357; total $12,548.

NEW YORK CITY.—Edward W. White, of the late firm of Gilchrist, White & Co., ship chandlers, is reported to have absconded and to be a defaulter to the firm, which owes $110,000 through his operations, of which $55,000 is in notes made by him in the firm name to obtain money. The remaining assets are $47,000, with $8,000 uncertain. Mr. Gilchrist has so far compromised $90,000 of the firm's debts, paying 50 cents, which has been freely accepted, and he is released. A new firm will probably be made up.

NEW YORK CITY.—J. H. Whitson & Son, horse dealers, assigned on the 7th inst. to Benjamin Albertson, without preference. The senior partner has been in the business over twenty-five years, and owned real estate which he valued at $65,000, mortgaged for $36,000.

NEW YORK CITY.—Henry Wilson, trading as W. Wilson & Co., wholesale wines and liquors, assigned on the 9th inst. to Charles H. Morgan, giving preferences to Libbie S. Russell $1,500; Eliza S. Hillyer $1,100; H. Van Lehe $1,000; Henry Hartshorn $1,000; Henrietta A. Wood $1,000; Peter Harmony, Nephews & Co. $1,899; Carrie L. Wilson $1,734; Grace E. Wilson $1,078; Louise M. Wilson $2,400; total $12,711.

SYRACUSE.—Edward W. Thomas, drugs, has assigned.

TROY.—William H. Potter (agent), brewer, has been sold out by Mr. Manning, of Buffalo, who, it is said, owned everything, which leaves Mr. Potter without anything to meet his obligations, which are stated to be less than $5,000.

TROY.—The schedules of Potter & Co., stove manufacturers, show liabilities $99,286; assets $107,909.

VICTOR.—The schedules of Moore & Powell, cigars, show liabilities $18,174; nominal assets $15,659; actual assets $4,423.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 17, 1883.

NOTES OF THE WEEK.

Telegraphic advices received yesterday afternoon indicate that the crisis in portions of the flooded regions of the Ohio valley was not past. At Cincinnati the situation was less critical, for the waters were receding, and had got down to about the highest preceding high-water mark, 64 feet and 3 inches, recorded 51 years ago. Still, the sky was threatening, and rain was not among the impossibilities. A slight wind was blowing also, which boded ill to the barges and other craft in the river. Relief corps had been organized, and vigorous efforts were being made to relieve the suffering. While the loss of life at Cincinnati has been considerable it has not been as large as might be expected. The loss in property, which has been enormous, has not been estimated, and it is doubtful whether it will soon be accurately known. Wholesale trade there, cut off from outside communication, except by wire, is completely interrupted. Jobbing houses have in many cases countermanded orders recently placed in the east. Retail trade is largely suspended, except in the line of groceries, provisions and other necessaries. Louisville has suffered less, and expects to escape the widespread disaster which visited Cincinnati. The former, however, has sustained some loss of life and property, and, to crown all, the backwater from the river coming through the sewers has caused a large amount of sickness, which threatens to spread. Lawrenceburg, Ind., where two hundred houses were turned over, and Jeffersonville, which likewise suffered much, are now in receipt of relief. At most large cities subscriptions are being made to relieve the distress caused. The outlook, however, is for further trouble from high water in the lower Mississippi valley. No data are available as to the quantity of live stock and growing grain destroyed in the flooded region.

Our Washington letter unfolds the state of affairs regarding the prospect of legislation at this session of Congress. It appears that if any tariff bill becomes law it will only come about through a conference committee of three from each house. So that, after all the debates in both houses, the resort in the end promises to be to legislation by joint committee. Nothing could better illustrate the extreme difficulty of dealing effectively with so complex a subject as the tariff by a popular assembly. As pointed out by our correspondent, the prospect of securing the enactment of any business measures of importance at this session is exceedingly slim.

There is little to be said of the stock market this week, save that the process of liquidation goes on. Everybody seems to want to sell stocks, and the buying appears to come from those who have sold short, and purchase to cover their contracts. Rumors of new "deals," consolidations, leases, guarantees, etc., start up from time to time, only to fall flat on the public ear. The trading in the market is left entirely to the professionals, and Wall street generally feels gloomy. February is always looked upon as a "bear" month, and, with the floods and snowstorms it is giving us now, it has proved a very bear month, indeed.

The need of checking the debt-making proclivities of cities and towns in the United States has been generally acknowledged since 1870. To this end various amendments to state constitutions have been adopted forbidding municipalities to contract debt beyond a given percentage of assessed valuation. Illinois was among the first of the states to adopt such an amendment. The Illinois Constitutional Convention of 1870 was an exceptional representative assembly. It foresaw the evils which would arise from the unchecked use of the borrowing power as a feature of local government. With the view of correcting the evils the Illinois amendment provided that no legal indebtedness should be allowed "in any manner or for any purpose to an amount, including existing indebtedness, in the aggregate exceeding four per centum on the value of the taxable property." Taking the state as a whole it now appears that this prohibition has not had the desired effect. It was expected that under it the local indebtedness of the state would speedily decrease. The recent report of the Auditor of Illinois shows that at the end of June, 1882, the aggregate municipal indebtedness of Illinois—$51,727,283—was in round numbers barely one million less than when the limitation on debtmaking was enacted. It appears from the report, says the Chicago *Times*, that "in very few instances has city or village indebtedness been reduced to any considerable extent; but in many cases it has been increased, though it exceeded the charter limitations before the increase was added. That is to say, in many cases the incorporated villages and embryo cities of Illinois have managed somehow to contract illegal debts." This, in spite of the fact that by a decision of the Supreme Court of Illinois a part of the debt of Chicago was declared void because of its being in excess of the legal limit.

The facts as to the working of the Illinois law go far to establish the soundness of the position taken by BRADSTREET'S, namely, that the only certain remedy for the evil of excessive municipal borrowing is absolute prohibition: the entire discrediting of a city's promises. The more the subject is looked into the clearer will it be seen that local government authorities should be compelled to rely upon direct taxation as the sole means of obtaining funds.

The Queen's speech at the reassembling of Parliament on Thursday was not unusually noteworthy. After expressing satisfaction at her maintenance of friendly relations with foreign powers, she records her gratitude to her forces for their prompt suppression of the "rebellion" in Egypt. The interference of the English in the last Eastern imbroglio has been a somewhat delicate subject for discussion, and unkind critics of the course of the government have not failed to take advantage of the occasions of attack afforded by the use of words hinting at the status of England in relation to proceedings in the Nile country. They now ask against whom this "rebellion" was waged. Against England as sovereign in Egypt? If not, they inquire what right had Great Britain to interfere to put down rebellion, or to reorganize Egypt after the rebellion was crushed. Earl Granville, in the House of Lords, stated that England in her Egyptian policy was acting in the interests of France and of all the other powers as well as her own, and added that it was indiscreet to announce when the troops in Egypt would be withdrawn. The Marquis of Hartington, in the House of Commons, said that Russia was not unfavorable to the efforts being made to reorganize Egypt.

The greater part of the speech was taken up with foreign affairs, less than one-third of it being devoted to matters of internal concern. In regard to Irish affairs, the speech states that the improvement in the social condition of Ireland continues, that agrarian crime has sensibly diminished, and that the law has been everywhere upheld. The Queen is of opinion that Parliament has, in recent years, devoted its time liberally to the most urgent needs of Ireland, and that the claims of general legislation, and of other parts of the kingdom, now demand regard. She trusts, nevertheless, that Parliament will be able to deal with some of the legislative wants of Ireland for which provision has not yet been made. It may be, however, that the very inconvenient and turbulent Irish party will derange some of these calculations. They will certainly do so unless they are summarily choked off by some of the "resources of civilization." In fact, notices have already been given of the introduction of two bills affecting Irish interests, one amending the land act and the other abolishing the viceroyalty. A much more significant and promising utterance in relation to the Irish situation than any contained in the Queen's speech, was that reported to have been made by Mr. Gladstone to M. Clemenceau, at Cannes, on Sunday last. The Premier said that the curse of Ireland had been centralization; that he desired to decentralize the administrative authority there, and that it would be the endeavor of his ministry "to make the humblest Irishman realize that he is a governing agency, and also that government will be carried on for him and by him."

The state of uncertainty in France still continues. The Chambers have as yet failed to agree upon any measure looking to the expulsion of the princes. In the course of the debate upon the Expulsion bill in the Senate M. Barthelemy St. Hilaire said that he regretted to see the republic depart from the path of tolerance. To this M. Deves, the Minister of Justice, replied that if the government shut its eyes to the machinations of the royalists it would be deserting the republic. Two days later a proposal, submitted by M. Waddington, was adopted, providing that any prince found guilty of furthering pretensions endangering the state should be banished after trial. On the day following all the members of the cabinet resigned on account of the action of the Senate on the Expulsion bill, but President Grévy, unable to persuade M. de Freycinet to undertake the formation of a cabinet, requested the ministers to remain at their posts for a time. On the 14th inst. M. Waddington's proposal was unanimously rejected by the committee of the Chamber of Deputies, and on the 15th Senator Barbey's proposal rendering the princes liable to expulsion by the decree of the President of the Republic, with a modification placing the princes under half-pay instead of depriving them of their military rank, was adopted by the lower Chamber. It is understood that a conciliation cabinet is to be formed under the presidency of M. de Freycinet, with M. Leon Say as Minister of Finance.

NEW YORK CITY'S GOVERNMENT.

In discussing last week the new charter for New York city, sent to Albany by Mayor Edson, we pointed out that under such a law both the legislative and executive authority would be vested in one man—the mayor. As is generally known, the Board of Apportionment, which is made up of certain executive officers, constitutes the real legislature of the city; that is to say, the taxing power. By the proposed charter the mayor would appoint the officers constituting said board, thus centering in himself, as stated, both the legislative and executive authority of the city. During the week the daily journals of the city have busied themselves in extracting interviews from prominent citizens, giving their opinions as to the expediency of the measure. So far as we have seen, very slight account has been taken of the full meaning of the proposed legislation which is to entirely do away with such a thing as a local legislature; to put away altogether the representative body once honorably known as the Common Council of the city of New York. On Tuesday the Board of Aldermen, who have little more authority left them than that of formulating and adopting futile resolutions, protested against the proposed charter for the reason, among other things, that it would "deprive the legislative department of the municipality of the last vestige of power which a series of usurpations has left it." Barring some idle declamation which enter into the resolutions, their soundness is, or should be, unquestioned. Instead, however, the *Evening Post* endeavors to characterize the resolutions as merely proceeding from a desire of the Board of Aldermen to retain their hold on such patronage as they now control. The *Evening Post* of Thursday says:

> To any one who lives in New York, or is familiar with the actual working of the government of the city, the idea that the Aldermen represent a fundamental principle of government is so absurd that the resolution has attracted little but derisive attention from the press here. The fact is that when we talk of "local self-government" of cities in modern times, what we mean is not local legislation, * * * but simply the management of the business interests of the corporation. Local self-government does not involve the idea of legislation at all. The only part of the government which is or can be local is that which relates to making streets, to paving, lighting and mending them; to supplying the inhabitants of the city with water, building docks and piers, laying out and maintaining parks, and *to raising and disbursing the money required for these purposes.*

It is necessary to once more direct attention to the manner in which the seat of government of New York was gradually removed from the city to Albany. When through the demoralizing influence of the credit system and the deficient interest on the part of the people in the conduct of local affairs the conduct of city business became notoriously bad, certain wise people thought to check the resulting evils by securing from Albany certain devices in the shape of boards and commissions. This was in the years preceding 1860. The point of departure in the removal of the seat of government to Albany is perhaps best marked by the passing of the Metropolitan Police bill of 1857. The sentiment of the time is illustrated by the opinions of leading journals. On February 18, 1857, the *Evening Post* thus concluded: "As a general rule, the more municipal officers we have the more heavily we are taxed and the more lavishly our money is spent." The general tone of this journal, which now seeks to make merry at the idea of a responsible Board of Aldermen, from the beginning of 1857 to the first months of 1858, was one of impatience and disgust at the crude working of the city government and an avowed preference for patent devices at the hands of the Legislature. On February 25, 1858, the *Evening Post* said: "The way to give popular sovereignty to the city of New York in reference to all minor local affairs, paradoxical as it may appear, is to take it away; in other words, vest it in the governor and Senate, who would be capable of appreciating the needs of our people, and who would be disposed to give proper heed to their complaints." This in 1858. The demands of the *Evening Post* were carried out. The city of New York was made a dependency of the governor and Senate at Albany. The results are known of all men. But now, instead of profiting by past errors, the *Evening Post* and those for whom it speaks would do away entirely with the notion that a local population of 1,200,000 stood in need of anything in the nature of a representative body as the distinguishing feature of its government. It is proposed to abolish the Board of Aldermen entirely. For perhaps the first time it is announced that the levying of taxes is not an act of legislation. The highest symbol of sovereignty is the right of taxation and appropriation. The growth of legislative power has been mainly due to the necessity of submitting questions of taxation to representatives of the people. The direction of New York city's affairs necessarily involves acts of legislation. The *Evening Post* would do away with local legislation and obtain everything of the sort from Albany. Its position is but one remove from advocating the appointment of an autocratic mayor of the city by the governor. As opposed to this, the true position is to advocate giving full executive authority to the mayor, while returning to the local legislature the power of taxation and appropriation. This done, responsibility could be fixed. Under the system which the *Evening Post* recommended in 1858 responsibility has been lost.

LIGHT WANTED ON THE TARIFF.

The Philadelphia *Press*, which is distinctly the spokesman of the protected industries of Pennsylvania, in a conspicuously printed leading article two days ago called the attention of Congress to the attitude of the business interests concerning revenue legislation. Those interests, it said, "prefer and ask for a just tariff bill, which shall fairly revise the rates, settle the question and end the destructive uncertainty that now prevails. They regard the Commission bill as going to the verge of prudence and safety for the present. If they can have that measure, or one closely approximating it, they are ready to accept its reductions; if not, they want no legislation save the abrogation of internal taxes." The position of those interests it declares to be clear, radical and conservative. "It is not an attitude of objection to just fiscal reform, but it is opposition to a violent and disastrous change, and it is a measure of self-defense and of the common defense." The business interests for which the *Press* speaks are declared by it to be as anxious for a conclusive settlement of the present disturbing agitation as any body of men can be. They appreciate the importance of removing the existing incongruities in the tariff, and they know the readjustments demanded by the advances and the changes that have been made in twenty years. "They understand that it is idle to cry peace when there is no peace, and that there can be no peace until this revision is equitably made." But they deprecate any sudden and extreme reduction as being more injurious than the uncertainty of leaving the question open, with the time thus secured to prepare for the change. So much as to the formulation of general principles.

Regarding the very important question, how to proceed in order to arrive at the desired revision, the *Press* is silent. Even in reference to the end itself to be attained, it has nothing to offer beyond the advocacy in a general way of the bill proposed by the much criticised Tariff Commission. The *Press* is understood to be thoroughly well informed as to the needs of the interests championed by it. It is therefore natural both for Congress and the country to look to the *Press*, and journals of like character, for the suggestion of a clue out of the labyrinth into which they have been led by the agitation of the tariff question—of some intelligible principle capable of ready application upon which the business of revenue revision might properly and safely proceed. Such a principle is not set forth in the article to which we refer. Has the *Press* any such principle in mind, and if so, will it state it for the benefit of Congress and the public?

PETROLEUM PRODUCTION AND REFINING IN 1879–80.

In the compendium of the tenth census, just published, the report on the production of petroleum contains the statement that the exact production of mineral oil during the census year cannot be accurately given, and that the exhibit furnished is at least but an approximate estimate "believed to be practically correct," inasmuch as it is "made up from all available sources of information." The receipts of oil by the pipe-line companies, private pipe-lines, the quantity destroyed by fire and that which ran to waste, are believed to have been fully and accurately reported. The possible margin for error then must lie with the figures respecting stocks at wells, and it is on this point that "estimates in the light of best available information" were rendered necessary. The details respecting the production of first, second and third sand oil during the census year are not of general interest. A summary of them is as follows:

	Barrels.
First sand oil	101,704
Second sand oil	176,766
Third sand oil	23,869,808
Beaver County, Pa., oil (amber oil)	86,803
Total production census year	24,235,081

Classifying this production by localities, instead of by qualities, the following is the report made:

	Barrels.
Northwest Pennsylvania	23,915,416
West Virginia and Washington county, Ohio	219,254
Beaver county, Pennsylvania	80,803
Glasgow, Kentucky	5,376
Grafton, Ohio	4,159
Greene county, Pennsylvania	3,118
Mecca, Ohio	900
Erie, Pennsylvania	25
Total production in census year	24,235,081

The census year began June 1, 1879, and included May 31, 1880. In connection with the above report as to production, the stocks on hand at each of the dates named is, of course, of importance. We summarize the census report of stocks of petroleum June 1, 1879, as follows:

	Barrels.
Pipe line stocks, third sand	6,538,357
Well stocks, Bradford district	812,067
Well stocks, lower country	201,600
Iron tank stocks, outside pipe lines	293,474
Other stocks	102,854
Total stocks petroleum June 1, 1879	7,948,352

On May 31, 1880, these stocks had increased as indicated in the following:

	Barrels.
Pipe line stocks, third sand	11,225,301
Well stocks, Bradford district	1,258,902
Well stocks, lower country	201,600
Iron tank stocks, outside pipe lines	532,318
Other stocks	81,104
Total stocks petroleum May 31, 1880	13,299,225

The totals of the two summaries last given point to an accumulation of 5,350,873 barrels of petroleum during the census year, over and above the home and foreign demand. As the total production of petroleum during the census year, shown above, was 24,235,081 barrels, the consumption of oil that year must have been 18,884,208 barrels, or an average of 1,573,684 barrels per month, or, reckoning thirty days to the month, an average of 52,456 barrels per day, against an existing estimated average daily consumption of about 63,000 barrels, or a gain of about 11,500 barrels average daily consumption of petroleum in the home and foreign trades in three years. A summary of the statistics of the investment of capital and the employment of labor in the production of petroleum during the year ending May 31, 1880, is as follows:

OPERATIONS DURING THE CENSUS YEAR, BY DISTRICTS.

	Bradford.	*Lower country.*	*Franklin.*	*W. Virginia and S. Ohio.*	*Others.*	*Totals.*
No. wells drilled	3,086	335	120	120	35	3,696
No. dry holes	53	79	15	...	..	147
No. rigs built	3,516	335	120	120	15	4,106
COST OF OPERATING THE WELLS.						
Cost of rigs	$1,274,550	$121,437	.....	$30,000	.....	$1,425,987
Cost of boilers and engines	619,000	100,500	.....	.....	.....	749,500
Cost of drive pipe	462,900	50,250	.....	.....	.....	513,150
Cost of casing	618,060	70,360	.....	15,000	.....	733,420
Cost of tubing	925,800	67,000	.....	9,000	.....	1,001,850
Cost of torpedoes	925,800	.....	.....	.....	.....	925,800
Cost of labor	2,166,000	252,000	.....	54,000	.....	2,472,000
Cost of wells, "total"	8,280,160	690,497	$48,000	120,000	$11,300	9,149,957
Diff. bet. "totals" and agg'te of 7 items.	1,228,050	29,400	.....	12,000	.....	1,328,300*

* Total sum unaccounted for in the exhibit; or, aggregate of differences between the real totals of each column and the items of the census given as "total."

From the last table it will be noted that the list of expenses incurred in obtaining oil, while fairly complete, does not include all the items of the cost of production. For on adding up the various columns it is found that the footings described as "total cost of wells" were larger than the aggregate of the items appearing above them. We have therefore taken the liberty to insert the figures giving the difference between the cost as accounted for and the cost given as the total, which in the aggregate, in the right-hand column, it will be seen, amounts to $1,328,300 less than the reported total cost, $9,149,957.

The figures furnished as to the number and classes of men employed, and amount of wages paid, are as follows:

TOTAL NUMBER MEN EMPLOYED.

Bradford district	5,968	W. Va. and S. Ohio	288
Lower country, Pa	4,944	Other districts	107
Franklin, Pa	170		
Total men employed			11,445

The above were divided as follows: Number of skilled workmen 2,111, of which 1,851 were in the Bradford district, 208 in the lower country, and 52 scattering; number of unskilled workmen 8,784, of which 3,617 were in the Bradford district, 4,686 in the lower country, 263 in West Virginia and southern Ohio, 155 in Beaver county, Pa., and 63 at Grafton, Ohio; and 550 wood-choppers, of whom 500 were in the Bradford, and 50 in the lower country re-

gion. The average rate of wages in all the districts reported was, for skilled labor, from $2.50 to $4.00 per day, except in the West Virginia and southern Ohio districts, where it was from $2.00 to $2.50 per day; for unskilled labor $1.50 to $2.00 per day, with the exception as above, where it was $1.00 to $1.50 per day. Woodchoppers received 90 cents per cord. Of the 5,968 men employed in the Bradford region, 3,000 are returned as engaged in drilling and 2,000 in caring for wells; out of 4,944 in the lower country region, 350 were drilling, 4,500 caring for the wells; in the West Virginia and southern Ohio districts, out of 288 men but 25 were engaged in the first, and 250 in the last of the two occupations. The following is a recapitulation of the total number of men employed in each district reported, and of the aggregate amount of wages paid them in each:

	No. men employed.	*Am't wages paid.*
Bradford, Pa	5,968	$4,212,120
Lower country, Pa	4,944	3,012,300
Franklin, Pa	170	102,000
Beaver county, Pa	75	45,000
Grafton, Ohio	10	6,000
Mecca, Ohio	15	75,000
West Virginia and southern Ohio	288	173,160
Glasgow, Ky	7	2,940
Totals	11,477	$7,561,020

There were 67,732,000 feet of lumber used in building rigs in the census year, in five districts, as follows: Bradford, 59,772,000 feet; lower country, 5,695,000 feet; Franklin, 600,000 feet; Beaver county, 225,000, and in the West Virginia and southern Ohio district 1,440,000 feet. There were 335,900 cords of fuel used in drilling in the two leading districts, or 302,400 cords in Bradford and 335,000 cords in the lower country. On that very interesting subject, the "cost of raising oil," the report says: "Flowing wells in the Bradford district, 6 to 8 cents per barrel; pumping wells in the lower country, 60 to 80 cents; pumping wells in Franklin district, $3 per barrel."

The statistics of the petroleum-refining industry for the census year are also included in the Compendium. It appears that there were at that time 86 firms or corporations engaged in refining petroleum, having an aggregate invested capital of $27,395,746. The number of "hands employed" is reported as follows: Average number of men, 9,498; average number of women 25, and of children 346, or, total average number employed 9,869. The total sum paid in wages was $4,381,572. The total value of materials is given at $34,999,101, out of which it appears that $16,340,581 was paid for 731,533,127 gallons of crude oil, or about 93.6 cents per barrel; the average price of crude in tank in 1879 was 86 cents and in 1880 94 cents. The next largest item in cost of materials was for barrels, of which 9,717,306 were purchased for $11,618,307. There were also 23,841,089 tin cans at $2,793,997; 45,813 tons of sulphuric acid at $1,206,052; 6,451,801 cases for $906,911; bungs, paint, glue, etc., $645,412; 504,667 tons of bituminous coal for $580,983, and 179,997 tons of anthracite at $446,922. Other items of fuel, chemicals and varieties of packages comprised the remainder.

The value of the products of the refineries is given thus:

Products.	*Quantities.*	*Values.*
Rhigoline, barrels	5,868	$29,117
Gasoline, barrels	289,555	1,128,166
Naphtha, barrels	1,212,626	1,833,395
Illuminating oil, barrels	11,002,249	36,839,613
Mineral sperm, barrels	16,544	202,725
Reduced petroleum for cylinders, barrels	26,018	371,020
Reduced petroleum for journals, barrels	204,841	1,024,017
Deodorized lubricating oils	70,415	611,572
Paraffine oil, barrels	79,465	468,023
Residuum, barrels	229,133	297,529
Paraffine wax, pounds	7,889,620	631,944
Petroleum ointment, harness oil, etc		328,097
Total value of manufactured products		$43,705,218

The average daily wages of the 9,498 male employés of the petroleum refineries compare very unfavorably with the sums earned daily by the employés of the producing interests, as shown above, being nearly $1 lower on the average. Considering the total sum paid in wages by the refineries as divided among the men alone, the average daily wages of each amounted to but $1.54.

This report on the refining interests does not make clear where the "enormous profits" are. The total amount paid in wages, added to the cost of materials used, aggregate $39,380,673. The value of manufactured products are returned as $43,705,218. This leaves a margin of $4,324,545, out of which must have come, of course, charges of "interest on investment," "depreciation in value of plant," rentals, etc. What remained constituted the year's profits on refining, but will hardly harmonize with the visible evidences of what the profits must have been.

GROWTH AND CHARACTER OF OUR EXPORTS.

There has been much exclamation and congratulation over the vast increase of the foreign trade of this country during the last dozen years, especially in exports, inasmuch as to the statesmen of the period increasing imports (unless in specie) are a sign of poverty, and an occasion for interposing "a wall of peaceful duties." Let us see what this increase in foreign trade has been:

Year ending June 30.	*Exports of domestic mdse.*	*Merchandise imports.*
1860	$316,242,000	$353,616,000
1865	136,940,000	238,746,000
1870	455,208,000	435,958,000
1871	478,115,000	520,224,000
1872	476,421,000	626,595,000
1879	699,539,000	445,778,000
1880	823,946,000	667,955,000
1881	883,926,000	642,665,000
1882	733,240,000	724,640,000

This development of exports is marvelous, but unanalyzed and unexplained statistics are apt in deceiving, and so let us proceed to ascertain of what this increase in goods exchanged chiefly consists. The imports figures given herein are, of course, specie values; the exports are in mixed specie and currency values, except for 1860 and since 1879–80. Specie values could be given for the totals, but as the details are given in mixed values only it was necessary to have the rule uniform; the effect is to make the exhibited increase in exports less than the real, but as this inaccuracy applies alike to all articles it is of no consequence for the purpose of comparison. The following schedule covers the principal articles:

Year ending June 30.	1870.	1881.	1882.	*Increase in 1881 over 1870.*
Raw cotton	$227,027,624	$247,695,746	$199,812,614	$20,668,122
Wheat and flour	68,340,822	212,745,742	140,304,773	144,404,920
Corn and meal	2,233,251	51,072,860	28,810,631	49,749,618
Other breadstuffs	1,086,860	5,613,008	3,525,724	3,927,048
Bacon and hams	6,123,113	61,161,205	46,075,744	55,038,092
Pork	3,253,137	8,272,285	7,201,270	5,019,148
Butter, cheese and lard	15,407,560	57,862,847	45,599,447	42,455,287
Fruits	542,502	4,330,710	1,750,395	3,897,217
Living animals	1,015,099	16,412,306	9,630,186	15,397,350
Other food products	4,391,729	24,231,931	20,870,263	19,587,065
Mineral oils and oil cake	36,088,242	46,599,473	57,435,585	10,511,725
Animal and vegetable oils	1,474,528	2,758,216	2,046,876	1,283,718
Leaf tobacco	21,100,420	18,737,043	19,067,721	*2,363,387
Other tobacco	1,604,805	2,141,841	2,362,148	537,036
Raw wool	11,393,497	14,305,899	18,511,410	2,907,402
Coal	1,306,388	2,831,460	3,092,755	1,525,102
Raw copper	923,320	838,350	644,810	*84,961
Furs, skins and hides	2,306,351	6,354,883	6,107,681	4,048,532
Leather	111,077	7,133,714	7,747,544	7,022,637
Manures	115,010	612,941	1,022,369	497,931
Seeds	98,478	1,062,766	4,219,600	964,288
Tallow	3,814,861	6,800,628	4,615,708	2,985,767
Spirits turpentine	1,357,302	2,414,719	3,798,934	1,057,417
Total food	$105,949,321	$441,668,737	$341,891,295	$336,019,416
Total above list	414,676,100	803,001,032	673,266,583	388,324,932
Total goods exports	455,208,000	883,926,000	733,240,000	428,718,000

* Decrease.

The $150,000,000 decrease in goods exports in 1881–82 as compared with 1880–81 is more than accounted for by that in the few items of cotton, wheat and flour, corn and meal, and bacon and hams; as the total in 1880–81 is the highest ever reached, we use that year for comparison. It being understood that "wheat" includes flour, etc., the following will show of what the increase since 1870 mainly consists:

	Increase in 1881 over 1870. Amount.	Per ct.	*Percentage of items to total exp'ts in* 1870.	1881.	*Percentage of increase of items**
Wheat	$144,404,920	211.30	15.01	24.07	33.69
Corn	49,749,618	2,237.90	0.49	5.88	11.52
All breadstuffs	198,681,586	274.16	15.87	30.58	46.20
All food	336,019,416	317.18	23.29	50.00	78.39
Cotton	20,658,122	9.11	49.88	28.00	4.82
Food and cotton	356,687,538	107.12	73.17	78.00	83.21

* This column gives the percentage of the increase in each item to the increase in total exports in 1881 over 1870.

It thus appears that one-third of the increased exports is wheat; that nearly one-half of it is breadstuffs; that nearly eight-tenths of it is food; and that 83.21 per cent. of it is food and cotton. Now to food and cotton add the five articles of oils, leaf tobacco, wool, furs (including fur-skins and hides) and tallow, and we have $409,160,000 in a total of $455,208,000 for 1870, and $785,321,000 out of $883,926,000 for 1881; thus 89.88 and 88.84 per cent. of the exports of those years respectively are accounted for by those seven articles; moreover, of the increase in exports in this term, 87.75 per cent. is covered by those seven articles; seven-eighths of the increase in exports thus consists of seven raw materials, which also comprise nearly nine-tenths of the total. But these seven do not quite complete the detailed schedule above given, and that schedule does not include all the raw materials. Adding to the total of that schedule a variety of such articles as ashes, tanbark, bonedust, hair, hemp, hay, hops, ice, lime and marble, naval stores, beeswax, quicksilver, rice, wool, argentiferous ore, sugar, spices, distilled spirits, zinc, sheet and pig copper, bricks, etc., with a lumped amount in unspecified raw materials, we have an aggregate of $424,170,000 out of $455,208,000 total exports for 1870, and $818,602,000 out of $883,926,000 total exports for 1881. What may be claimed as raw materials, therefore, formed 93.18 per cent. of the exports in 1870, and 92.61 per cent. in 1881; although the remaining $31,038,000 in 1870 did become $65,324,000 in 1881, the ratio of this increase to the whole increase was barely 8 per cent., while raw materials formed 92 per cent. of that increase.

Of what do the exports of manufactures, or 7 or 8 per cent. of the total, chiefly consist? The following are the principal items:

	1870.	1881.	*Increase.*
Firearms	$5,015,732	$1,173,222	*$4,842,510
Cutlery, tools, files, etc	486,017	1,172,286	685,669
Ingots, bars, sheets and wire	5,755	37,634	31,879
Railroad bars or rails	.....	6,976	6,976
All manufactures of steel	5,613,754	2,798,436	*2,815,318
Locomotives	341,794	893,123	551,329
Unspecified iron	2,402,652	5,245,366	2,842,714
Unspecified machinery	1,913,484	4,037,899	2,124,515
Total iron	5,389,148	11,389,814	5,930,666
Sewing machines	2,233,326	1,982,324	*251,002
Agricultural implements	1,088,476	2,420,318	1,331,842
Cars, cars and carriages	1,116,542	1,557,685	441,143
Clocks	584,673	1,146,753	562,080
Cotton manufactures	3,787,282	13,671,387	9,784,105
Wool manufactures	124,159	331,083	200,924
Drugs and dyestuffs	2,360,561	3,671,987	1,311,426
Glass and chinaware	571,603	879,199	307,596
Wood manufactures	2,336,431	4,294,403	1,957,972
Hemp manufactures	285,531	1,185,622	*900,091
Clothing	424,170	533,961	109,791
Leather manufactures	562,254	954,731	392,477
Musical instruments	267,400	974,982	707,582
Cordage	251,343	421,732	170,389
Books, etc	341,080	690,350	349,270
Unspecified	606,777	6,928,099	6,321,322
Total above	25,821,740	55,694,865	.....

* Decrease.

The decrease in the item of firearms is explained by the special demand from Europe in 1869–71, which ran the exports in 1870-71 up to $13,400,000. The detailed showing above gives protected interests the benefit of the best showing they can make, although a few "infants" are omitted because their figures are trivial, notwithstanding their ratio of increase is large. On the other hand, the imports of the following seven classes of articles—all of which, except those of silks, which seem to be too small for separate statement, are included in the schedule just given—may be contrasted with the exports of the like classes:

	1870.	1881.
Cotton manufactures	$23,380,053	$31,219,329
Clothing	2,573,333	1,813,881
Glass, china, etc	8,546,405	19,217,883
Iron and steel	30,150,174	37,709,286
Wood manufactures	9,682,077	8,320,968
Wool manufactures	37,490,669	31,156,426
Silk manufactures	23,904,048	32,056,701
	$135,732,759	$161,494,474
Exports of same, except silks	18,236,547	33,778,283

To this might be added the fact that not only did foreign vessels secure all of the increased carrying trade, but that American vessels carried $9,646,000 less imported goods and $63,650,000 less exported goods in 1880 than in 1870.

OUR NEW SUGAR INDUSTRY.

To any one who is aware of the magnitude of our sugar consumption, and of the enormous amount of sugar and molasses imported into the United States as compared with the amount of our production, it will not seem surprising that any industry which promises to diminish the bulk of this importation, successfully to those engaged in it, should meet with the enthusiastic support of our farming community. Within three years, thanks to ex-Commissioner of Agriculture General William G. Le Duc, and his assistant, Professor Collier, the chemist of the department, such an industry has been developed, and is rapidly attaining such proportions that the commercial world will soon be obliged to take cognizance of it.

Our readers have probably divined that the industry to which we refer is the raising of amber-cane and other varieties of sorghum at the north. A series of experiments made by Professor Collier during the past year shows that these canes are almost if not wholly as rich in sucrose as the sugar-cane of Louisiana. The southern cane yields from 100 to 115 pounds of sugar to the ton of cane, while the yield of amber-cane has thus far been only from 60 to 65 pounds of sugar per ton. But the manufacture is as yet only in its infancy, and last season is known to have been an unfavorable one; so that those who are interested in the most successful factories are confident of being able to obtain 100 pounds of sugar to the ton of cane with improved methods of manufacture. But even at the yield already assured it has proved to be a remunerative business. Like the yield of hops, there is a wonderful difference in the amount of cane obtained by various people upon various lands. It ranges all the way from 3½ to 17 tons per acre; but a fair average growth is from 10 to 12 tons. A sandy loam, or what would be considered a poor land for general farming, and consequently a cheap land, is best adapted for the growth of cane. The value of the seed pays all the expense attending its growth down to the time of cutting the cane; and it will readily be seen that if an acre produces 10 tons of cane containing 60 pounds of sugar to the ton, or 600 pounds to the acre, at 8c. per pound, with the cost of manufacturing only $1.75 per ton, the land is paying much better than it will pay in any other general crop.

The figures representing our imports of sweets have been given so often that we will only refer to them briefly for the sake of comparison. The most recent statistics show that in 1882 our consumption of raw sugar amounted to 1,177,949 tons, of 2,240 pounds weight, in comparison with 1,008,932 tons in 1881. Only one-eighth of this was produced at home, the remaining seven-eighths being imported. The value of our importations in 1881 was as follows:

Sugar and molasses	$88,432,003
Duty on same	47,984,033
Total	$136,416,036

Now the director of the United States Mint estimates the gold and silver product of this country in 1881 to be:

Gold	$36,500,000
Silver	42,100,000
Total	$78,600,000

Thus we paid out for sugar and molasses alone $57,816,036 more than the total amount of our gold and silver production. Of course, its value is by far the the largest of any commodity which we import; representing one-sixth of all the goods brought into the country. The importance therefore of an industry which will enable us to keep a constantly increasing amount of this money at home among our own citizens can hardly be overestimated. France furnishes an example in point. In 1811 a French scientist obtained 1-3 per cent. of sugar from

beets at a cost of 80 cents per pound. A month afterward Napoleon, who saw the infinite value of this discovery, providing it could be made practical, established six stations for making experiments on beet sugar, and granted 1,000,000 francs for their support. At that time France was consuming annually 30,000,000 pounds of sugar. From that period onward there was a steady increase of beet sugar in France. In 1850 the production was 76,000 tons; in 1860 it was 120,000 tons; in 1870 it had risen to 282,000 tons, and in 1882 it amounted to 410,000 tons, or twenty-seven times the amount of the annual consumption in 1811.

Now, there is no reason why the United States should not do far more than duplicate the experience of France. Within a comparatively short time we ought to be producing a considerable proportion of our consumption of sugar and sirup. More or less sorghum has has been raised during the last year in twenty-eight states of the Union, including twelve of the southern states. The returns are by no means complete, but they show that 12,898,098 gallons of sirup were made, and 509,731 pounds of sugar. Kansas leads in the amount of sirup and New Jersey in the amount of sugar. New York state produced over 100,000 gallons of sirup and over 90,000 pounds of sugar. With these results before us, in an industry which is not more than four years old at the most, we are warranted in predicting grand and speedy accomplishments. The sugar has sold readily at 8c. per pound and the sirup at 40c. to 60c. a gallon, according to locality. In five years more we expect to see cane-growing one of the leading agricultural interests of the north. Wherever it has been entered upon its cultivators are enthusiastic, and propose to increase their acreage. During the present winter conventions have been held in several of the states most largely interested. It is the belief of its advocates that it will not only succeed in largely diminishing the amount of our imports, but will give a vastly increased value to lands that are now comparatively worthless.

In a subsequent article we shall speak of the proceedings of some of the conventions and give an account of some of the larger sugar establishments in the north.

OUR IMPORTS IN THE LAST FISCAL YEAR.

An elaborate and exhaustive report on the imported merchandise entered for consumption in the United States, with the rates of duty and amounts collected, for the fiscal year ending June 30 last, and for preceding years, has been issued by the Bureau of Statistics. The total value of the imports of merchandise, including that withdrawn from warehouse during the fiscal year referred to, was the largest for any one year in the history of the country, amounting to $716,213,947.50. Of this amount the value of the dutiable merchandise imported was $505,491,996.66, and of that entered free of duty was $210,721,980.84. The total amount of duty collected was $216,138,916.09. This sum amounts to nearly 30.2 per cent. of the total value of all merchandise imported and to 42.75 per cent. of the value of the dutiable goods only. The heaviest year's importations of merchandise preceding the fiscal year under discussion was 1873, when the total value of goods received was $663,146,657, of which the value of those entered free of duty was a little over one-third, or in about the ratio of 17 to 48. The total duty collected was $184,929,042, which amounted to an average *ad valorem* duty of 38.15 per cent. on the value of the dutiable importations, and to 27.88 per cent. on the aggregate value of free and dutiable goods received for consumption. Thus, while the net increase in the value of the aggregate importations over that of the fiscal year ending June 30, 1873, was about 7½ per cent., the increase in the average rate of duty paid on the value of dutiable goods was 4½ per cent., and on free and dutiable goods 2.1 per cent.

The tabular classification of the leading articles imported free of duty, arranged in order of values, is an interesting exhibit. As stated above, the total value of these goods entered for the year ended June 30, 1882, was $210,721,980.84. Six articles comprise 70.3 per cent. of this total in value, none of which are looked upon as luxuries. Regarding value of imports solely, coffee comprised 21.8 per cent. of the total value of free importations; chemicals, drugs and medicines 13.1 per cent.; hides and skins, other than fur skins, 13.1 per cent. also; tea 9.1 per cent.; india rubber, crude and milk, 6.7 per cent.; and silk, cocoons, raw, waste, etc., 6.5 per cent. Next in order come imports from the Hawaiian Islands, about 3.3 per cent., following which are paper, tin and manufactured wood. The only articles in the list which under the most rigid classification would come under the head of luxuries, are fruits, including nuts, uncut diamonds, paintings and statuary, in all aggregating about $1,500,000 in value. Coffee was imported to the value of $46,076,998.86, and the second on the list, chemicals, drugs and medicines, to the value of $27,744,804.26. Hides and skins, other than furs, came in of nearly the same value; tea to the value of $19,390,425.68; india rubber, crude and milk, of $14,207,212.42, and silk, cocoons, raw, waste, etc., $13,879,356.

Under the head of dutiable articles imported there are thirteen different classes of imports, each of which are in the aggregate valued at two figures in the millions. The appended abstract gives the values thereof, amounts of duties collected, average *ad valorem* duties collected, and per cent. of total duty collected on each commodity of the thirteen varieties specified. The total value of dutiable articles imported was $505,491,966.66, the total amount of duties collected was $215,617,669.02, and the average *ad valorem* rate 42.66 per cent. The first thirteen in the list are as follows:

Dutiable articles imported.	*Values.*	*Duties collected.*	*Average ad val. rates of duty.*	*Per ct. of total duties collect'd*
Sugar, molasses and confectionery	$94,523,797	$19,207,279	52.05	22.82
Wool and mfrs. of	47,618,182	29,253,016	61.43	13.57
Silk and mfrs. of	98,328,251	22,633,137	59.05	10.50
Cotton and mfrs. of	31,285,306	12,227,103	39.08	5.67
Iron and mfrs. of	28,307,305	11,430,611	40.38	5.30
Steel and mfrs. of	25,690,961	12,744,035	49.57	5.91
Flax and mfrs. of	22,182,926	7,388,055	33.31	3.43
Fruits, including nuts	18,047,937	4,427,135	24.53	2.05
Tin and mfrs. of	16,634,009	4,922,038	29.59	2.28
Breadstuffs and farinaceous foods	16,478,596	4,152,827	25.20	1.93
Chemicals, drugs, dyes and medicines	14,161,115	4,981,453	35.18	2.31
Hemp, jute, etc., and mfrs. of	12,382,186	2,414,080	19.56	1.12
Leather and mfrs. of	12,215,203	3,785,326	30.99	1.75

The agitation in Congress over the rates of duty to be fixed, particularly on sugar, wool, iron and steel, renders the third and fourth columns of this table particularly interesting. From the above it is noted that during the last fiscal year 22.82 of the total amount of duties collected, as shown, were from importations on sugar, molasses and confectionery, 13.57 per cent. was on wool and manufactures thereof, 10.50 per cent. on manufactures of silk, 5.67 per cent. on manufactures of cotton, 5.30 per cent. on iron and manufactures thereof, 5.91 per cent. on steel and manufactures thereof, and 3.43 per cent. on flax and manufactures thereof. In all, on these seven classes of commodities, there were paid $144,884,737, or 67.19 per cent. of the total sum collected on dutiable merchandise imported during the year ended June 30, 1882. In conclusion, it is shown that New York continues to receive the goods imported which pay nearly seven-tenths of the total amount of duties collected, as the following table indicates:

	Amount of duty collected.	*Per cent. collected at each port.*
New York	$149,334,077	69.09
Boston and Charleston	23,433,012	10.85
Philadelphia	11,610,326	5.37
San Francisco	8,280,125	3.83
Chicago	3,352,386	1.55
New Orleans	3,002,892	1.39
Baltimore	2,928,160	1.35
All other ports	14,197,933	6.57

OCCASIONAL NOTES.

The Foreign Exhibition Association, of Boston, are pushing forward the preliminary work of an enterprise which has been for some time under consideration, the holding of an exhibition for the display of foreign manufactures and products. At a recent meeting of the Association, at which the prospects of the exhibition were discussed, General C. B. Norton, the secretary of the Association, said that the proposed exhibition was in its main plan a novel idea. In no country, he said, has a distinctly foreign exhibition been held. All the great expositions have been international, and the products of the country where they have severally been held have naturally predominated both in mass and variety over those of other countries. This exhibition, on the other hand, is not to be a competition of American as against foreign industries, but a comparative exhibit of foreign industries calculated to contribute at once to the enjoyment and instruction of the American people, and to the commercial advantage of the foreign interests and industries represented in the exhibition. The Association has already, through its committees, sent selected commissioners to many foreign countries, with instructions to confer with the United States ministers and consuls, and have distributed circulars and documents very extensively in different parts of the world. A committee on transportation has been appointed, which has been employed in perfecting arrangements looking to the simplification of the processes of transfer, and to the securing of speedy and reliable transmission of exhibits. The committee hopes by these means to relieve shippers from many inconveniences and annoyances, and to render the expenses much less than at any previous world's exhibition.

The New York Chamber of Commerce has received for distribution a number of blank applications for space in the exhibition of arts, products and manufactures to be held at Cork, Ireland, during July, August and September next. A circular accompanying the blanks points out that the exhibition will afford a favorable opening for the introduction of American produce and manufactures in Ireland, and an opportunity for bringing the merchants and manufacturers of both countries into direct communication. The circular also draws the attention of American merchants and manufacturers to the fact that the revival in Irish manufactures creates a great opening for the introduction of American machinery. The machinery department is to be a leading feature of the exhibition, and the committee in charge intend to provide exhibitors in this department with motive power free of expense. It is promised that every precaution will be taken to protect the rights of patentees. A statement of the United States Consul at Cork is quoted as deserving the attention of American manufacturers, in which he says that almost every conceivable household, agricultural and mechanical invention and contrivance could find sale there under proper circumstances, and that the same remark would apply to fresh and dried fruits of all kinds. Among the things from America not wanted in Ireland are mentioned whisky, ale, porter, beer, ærated waters, wool, woolen goods, millinery goods, expensive clothing, hides, skins and kips, carpet goods, cheap hats and caps, printed books, poultry, burden animals, raw flax and root crops.

According to the annual report of the Superintendent of the Banking Department of the state of New York, there were on January 1, 1883, 127 savings banks in the state, being the same number reported on January 1, 1882. Of these, 114 are in active business, the remaining 13 being in process of voluntary liquidation. The total resources of the banks on January 1 were $472,927,319, as against $443,047,414 the previous year, an increase of $29,879,905. The total number of depositors was 1,095,971, an increase over the previous year of 59,865. The total amounts deposited and those withdrawn show large increases. The amount of interest credited and paid during the year was slightly in excess of that for the previous year. The surplus reached the large aggregate of $60,630,827, a sum greater than the total deposit of the state prior to 1861. The superintendent says, in reference to the money of depositors in insolvent banks, that if there is ever a time when the state owes it to depositors to expose the management of their funds to the light of publicity, it is while those funds are in the hands of a receiver, and he urges that regular examinations of savings bank funds in the hands of receivers should be made and annually reported to the Legislature. He is led by the success of the scaling process to recommend the passage of a law providing that whenever a savings bank becomes insolvent through depreciation of its securities, without fault on the part of the trustees, the Supreme Court shall have power, upon application of a majority of the trustees and the Superintendent of the Banking Department, to enter an order scaling the amount due to depositors. The Legislature, in his opinion, can and should reduce the expenses of receiverships by reducing the fees of receivers. The litigation, procrastination and attendant expenses, however, cannot, as the superintendent well remarks, be regulated by law; the best way to escape the disasters of a receivership is, as he suggests, to avoid the receivership itself, if possible.

Mr. Edward Atkinson sets a much higher value on the virtues of ensilage than was accorded to them even by the members of the Ensilage Congress lately held in the city of New York. In a letter to a director of the Southern Exposition, at Louisville, Ky., he submits as a "pet theory" that during the last twenty years three events have occurred within the United States of transcendent importance in their effect upon the material welfare of the people. The first of these was the establishment of personal liberty, without distinction of race, color or condition; the second, the consolidation and extension of the railroad service; and the third, the adoption of the rediscovered method of saving green crops in pits, known as ensilage. To the first, he says, is due the doubling of the cotton crop, and, what is more important, the growth of a diversified system of agriculture and the introduction of varied arts and manufactures in states where previous conditions had forbidden them. To the second he ascribes the saving in a single year (1881) of a sum amounting to not less than $800,000,000, or $100,000,000 more than the whole burden of national, state, city and town taxes combined. The third, he continues, will soon bring about "a change in the equation from one cow to ten acres or more to ten cows to five acres or less." He suggests that silos of various kinds be constructed near or alongside the main exhibition buildings, that special and varied crops be planted to be saved therein, and that cattle, sheep and hogs be fed upon the contents during the exhibition.

The bad crops, the phylloxera, the budget complication, and the political crisis, apparently do not sum up the measure of France's difficulties. According to recent advices, a crisis in the metallurgical industries is threatened. Some apprehension exists that notwithstanding the usual demand in the country itself, the increased production will result in a plethora. This unpleasant situation the government will probably be unable to relieve, since, as is well understood, its necessities must speedily compel a retrenchment in its expenditures for public works. Meanwhile, it appears, large new establishments have lately been erected or are approaching completion at various places in France, and these will turn into an already glutted market a large additional amount of superfluous material. The Manchester *Guardian* is striving to convince the French ironmasters that the evil with which they are soon likely to find themselves face to face is one of the inevitable consequences of the protective system, which, it asserts, induces over-production for the home market of an article which, in adopting protective duties, France has already confessed that she is unable to produce for foreign markets as cheaply as her neighbors can produce it.

The fact that the English take a less serious view of the crisis in France than Frenchmen do themselves seems to be indicated by the circumstance mentioned by the Paris *Bourse* that large purchases of French stocks and securities have recently been made for the account of English firms. The *Bourse* has some remarks not without interest in connection with the appreciation of French credit on the foreign markets. It recalls the fact that when the Empire was complained native investors bought up the rentes, whereas foreign capitalists, looking upon the *coup d' etat* with distrust, hastened to sell their French stocks and securities. On the other hand, ever since the establishment of the republic French credit has been better appreciated abroad than at home. The Paris journal finds occasion for gratification in the fact that, in spite of the semi-panic prevalent on the Bourse, and of the despair in which politicians seem to be plunged, the English do not by any means consider the French situation as grave as many of the local home journals would represent. The *Bourse* is apparently in a frame of mind to welcome light upon the existing complications from whatever quarter, and it confesses that the recent buying of French rentes by English capitalists has gone far to tranquilize it and to set its mind at rest.

A correspondent of the *Economist* sketches the attempt to deal with the indebtedness of the rural population in India, which, always oppressive under the extortion of the money-lenders, was very much aggravated by the severe and protracted famine of 1877. This terrible scourge desolated the province, destroyed its agricultural stock, and killed off a large percentage of its population. Remedial legislation was urgently demanded, and in 1879 the first attempt to deal with the difficulty was made by the Indian government. Flaws were discovered by the acute money-lenders in the act of 1879, and fresh difficulties were encountered, to meet which a revision of the first act was found necessary. This revision went into operation in 1881. The objects of the legislation referred to have been to make the courts less technical, dilatory and expensive, and to bring them nearer to the ryot, or landholder, than formerly. A great majority of the disputed cases were disposed of by the courts under the act of 1881 and in a number of cases the conciliators (a class of officers intended to bring the parties together without the technicalities of legal formalism, in order that they might talk over their disputes and settle them without an appeal to the law) have effected compromises or amicable arrangements. It was a frequent complaint under the former law that the judges had not power to go behind the bond to ascertain the real amount of the debt, and it was alleged that the money-lenders received the bond-debt with compound interest accumulated at rates which the debtor never even understood. The result of this was that the ryots regarded their debt as hopeless, neglected to defend the suits brought against them, and, when rendered desperate, plunged the country into disorder. The correspondent of the *Economist* mentions that whereas before the intro-

duction of the Relief act *ex parte* decisions were pronounced against the debtor in from 57 to 74 per cent. of all suits, and in 94 per cent. of money suits only, the proportion of these has now fallen to 6 per cent. The costs of litigation, it is said, have been reduced by 50 per cent. Among other features of the act worthy of notice are provisions allowing the debtor to sue for a clear statement of his account and to pay the decree given against him by easy installments, and the substitution of a prompt and equitable system of revision and superintendence by a special judge instead of the tedious and cumbrous system of appeal, which, under the old law, led to interminable expense and litigation. It is said that, on the whole, the act, as far as it has been extended, has cheapened justice, inspired confidence, and secured for the peasant proprietor a fair trial. As an evidence of its popularity it is mentioned that the ryots of adjoining territories not under the British rule, have repeatedly urged their native rulers to apply its provisions.

In the *Journal of the Statistical Society* for December, 1882, the first place is given to Mr. Robert Giffen's inaugural address as president of the society, "On the Utility of Common Statistics." This address, as well as that delivered by Prof. Bonamy Price before the Economic Department of the British Social Science Congress, has been already noticed in BRADSTREET'S. The other papers printed in the *Journal* are Mr. G. Sclater-Booth's address before the British Association "On Local Government in Rural Districts," and Mr. William A. Guy's paper on "The Small Pox Epidemic," read before the Social Science Congress. Among the "Miscellanea" will be found the usual report on the agricultural returns of Great Britain, including tables of area, acreage and production, with percentages, etc., and a translation of an interesting report of the Director of the French Ministry of Public Works, giving an account of the organization of government statisticai offices in the principal countries in Europe and in the United States. The index to the volume for the year is full and convenient.

It seems that even in so remote a community as Australia the question of civil-service reform is coming into prominence. From an article dealing with this subject in the *Victorian Review*, for December, it appears that some abuses similar to those with which other nearer administrative systems have been afflicted have crept into the public service there. The writer of the article, Mr. John Wisker, declares that all the public services of the colony are overgrown; that unnecessary appointments are continually made through complaisance, if not from motives of a less defensible kind, and that the need of the colony is a limitation upon the power of nomination. The discussions of the subject by the antagonists of the proposed reform apparently bristle with references to side issues, as has been the case with the utterances of the defenders of the spoils system in older countries than Australia. Competitive examination, a feature in the system of reform advocated, is attacked by the enemies of the movement as not being by any means an infallible method of securing the best moral, intellectual and physical candidates for the public service; but the writer in the *Review* urges that it is the best expedient yet discovered for keeping the service within reasonable limits and for giving everybody an equal chance. The reform will, he says, cure one great evil in the service, in that it will relieve ministers from the pressure brought to bear on them by needy aspirants. Under the system of competitive examinations a minister, it is said, would have a ready reply to importunity, since he could simply refer to the number of vacancies already existing.

SPECIAL CORRESPONDENCE.

THE PROSPECTS OF LEGISLATION AT WASHINGTON.

Washington, February 14.—There will remain, after Saturday of this week, but twelve working days of the Forty-seventh Congress, and it is still uncertain what the purpose of Congress is to be as to the most important subjects of pending legislation. It does not appear what will be done with the tariff, the bankruptcy bill, the interstate commerce bill, the shipping bill, or with all the measures which vitally affect the business interests of the country, and as to which such loud promises were made two years ago. The elections of last fall stimulated the dominant party to great energy this winter in the matter of work; but their zeal has not been well directed. There have been long, laborious hours, but no results, and the Congress is either likely to adjourn without having enacted any important legislation, or else crude measures will be adopted in the rush of the closing hours of the session which may add to existing embarrassments of trade rather than correct existing evils.

As to the tariff, the Republican managers have a very definite scheme. It remains to be seen whether they will have the votes to accomplish it. The plan is, if the bill shall pass the Senate, to take advantage of the peculiar parliamentary form in which the Senate tariff bill is found—that of a Senate amendment to a House internal revenue bill—and to non-concur in the Senate amendment, sending the subject to conference, and in that conference, which will be appointed by the presiding officers of the two houses, to frame such a tariff bill, under whip and spur, as will make, of course, very considerable reductions in the revenue and will save all protected interests from injury. There are some difficulties in the way of the execution of this plan. The parliamentary machinery of the House is a great obstacle. Added to this is the determined opposition of the Democrats to the relegation of the vast subject of the tariff to six men, three from either house. The Republicans propose to overcome this difficulty by changing the rules. This can only be accomplished by a quorum of Republicans, aided by allies recruited from the protectionists among the Democrats and the Greenbackers. The utmost care is now being taken to see to it, not only that every Republican shall be in his seat at the right time, but that he shall vote right, and the list is now being polled in advance of the critical moment, in order that there may be no slip in the programme. So far as parliamentary predictions can safely be made under such confused circumstances, it seems probable that the plan to refer the tariff subject to a conference committee will be successful, and that some sort of a bill will come from that committee and be passed by a party vote in the rush and excitement of the closing hours of the Congress. A number of accidents may intervene to prevent the successful performance of this programme. Among these accidents may be counted unexpected Republican opposition on the part of those western Republicans who are not willing to surrender the decision of the tariff question to the extreme protectionists, who will be certain to constitute the conference committee. Another possible accident may be fillibustering opposition from certain Democrats. And there is a remote possibility that the Senate bill may not be sent to the House. If a conference committee shall be appointed, under ordinary parliamentary procedure, it will be constituted as follows:

In the Senate—Morrill, of Vermont; Sherman, of Ohio, and Beck, of Kentucky. In the House—Kelley, of Pennsylvania; Haskell, of Kansas, and Carlisle, of Kentucky.

Of course there could be no question as to the kind of tariff which would be agreed upon by Morrill, Sherman, Kelley and Haskell, for they would, of course, constitute the committee, the Democratic members being powerless. While any tariff measure which that committee would be likely to report would, unquestionably, upon its face, appear to result in a reduction, it is very doubtful whether the taxpayers would notice any change in their pockets from the operations of such a conference made law. Yet that is the most that can be expected now as to any tariff legislation in the Forty-seventh Congress.

The next bill, affecting the business interests, which will be considered in the Senate after the Tariff bill shall have been disposed of there, will be the Shipping bill, which has passed the House. This bill is the fruit—and the rather imperfect and inconsequential fruit—of the labors of the joint shipping commission. The bill proposes to remedy a great many of the minor evils which now exist in our shipping laws, and does remedy them, and will be found in many particulars a very substantial relief to the shipmaster, while it will help to improve the condition of the sailor. But the bill is mainly on the surface. It does not go to the root of the matter; and any one who expects, as a result of it, to see a new impetus given to American commerce, or to see the flag floating from a single mast where it does not now float, will be mistaken.

There will be an attempt to bring up the Bankruptcy bill in the Senate after that, but it will be useless, for, even if the bill could be passed by the Senate, it certainly would never receive consideration in the House in the closing days of the session. It will be very extraordinary if any bankruptcy legislation shall be enacted by this Congress.

The same is true as to interstate commerce, as to which such a forcible demonstration was made in the beginning of the Congress. The bill relating to this subject has scarcely advanced from its initial stage. The same is also true as to the various measures proposed for reciprocity with different countries, with the possible exception of the treaty pending as to Mexico. That treaty, owing to the fact that its promoters are very influential and energetic, is now pending in the Senate Foreign Relations Committee, and, it is expected, will be favorably reported. It is not so certain what the result will be in the Senate. Senators having excellent opportunities for information on this subject doubt whether the treaty will be ratified. There is a good deal of opposition to it, particularly on the part of southern Senators, from apprehensions that the treaty will in some way affect the sugar interest of Louisiana by making it possible to bring in large quantities of sugar from Mexico, or to introduce upon the gulf coast the evils of the Hawaiian treaty by the importation of Cuban sugars through Mexico under this treaty.

The same general conclusions may properly be reached as to all the other important matters affecting business interests which are pending in this Congress. The time is passed for any intelligent consideration by the two houses of any new scheme, and the Forty-seventh Congress, so far as the commercial interests of the country are concerned, is likely to have the verdict rendered which has been rendered in the case of so many of its predecessors—nothing done.

LETTERS TO THE EDITOR.

RICHMOND OPINION ON THE SILVER QUESTION AGAIN.

To the Editor of BRADSTREET'S.

SIR—I hold these to be established truths, recognized by every student of political economy, or even casual observer of events, to wit: 1st. That the value of commodities depends upon cost of production, supplemented by the world's demand for them when produced. These two conditions constitute the law of their value, and such value must vary as these conditions vary. 2d. That money, like other commodities, is controlled by this law, be it gold, silver or paper; but, being designed to measure the value of all other commodities more than any other, stability is its first requisite; and that consideration should determine the choice of the article to be used as money. 3d. That of all fluctuations of value the fluctuations of the value of money is productive of most harm. An unstable currency is ever the fruitful parent of disaster.

Referring to the first of these propositions I point to the demonetization of silver in Europe, Mexico and South America as indisputable evidence that the world's demand for it has greatly diminished. A glance at one or two of the countries that have given up silver as money, and their relations to the commercial transactions of the earth, indicates somewhat the degree in which this demand has diminished. Take first Great Britain, the world's clearing-house. In the calendar year 1880 Great Britain purchased, or imported, as it is phrased, nearly two billions of dollars' worth of commodities from the other countries of the earth, and furnished them with a billion and a half of her own. Germany bought largely over a billion and sold about the same amount. It is unnecessary to enumerate other countries. Suffice it to say that in these immense transactions silver money found no place. Now, as to the second condition of this first proposition, it is safe to assume that the cost of silver production has been lessened by the light latter years have shed upon all our operations with nature. I am aware that it may be urged that this last fact would apply to all others as well as the silver industry, and, therefore, that condition of its value is unchanged. For the sake of fairness grant this. The obvious reply is, that cost must be joined to demand to establish value; and in the absence of this demand the cost of producing a surplus of silver simply represents an injudicious investment to those who engaged in it. The foregoing furnish, I think, a partial explanation of the depreciated value of silver to-day, while the facts cited in this explanation are themselves but the logical outcome of other and more remote causes. It is beside the purpose of this discussion to trace those original causes. The facts resulting from their operation demand our attention. When a man's house is on fire it is wiser to put it out first and ascertain the cause thereof afterwards. So now, with our financial fabric seriously menaced, and every industry in the land imperiled, the application of a remedy is the first need—the highest wisdom. That remedy is simple and apparent—the suspension of the Coinage act. When the people understand the true import of the measure, it will be erased from the statute book, and exist only to mark the political graves of its authors. I would address this question to every intelligent voter in the land: Are you prepared to exchange the product of your labor upon the basis of a dollar's worth of yours for 82 cents' worth of another's, be yours corn, or what not, and that other's silver, and ever so shiny? Are you willing to have a tax of 18 per cent. wrung from your hard-earned savings to enrich the holders of silver shares? This is the tribute to silver required of you by the Coinage act. An enlightened public opinion will quickly comprehend this fact, and then will follow the day of wrath. It will not be repealed until the people manifest their discontent. The Treasury vaults are crowded with the 82c. pieces called dollars under this act. New vaults are required to be built to store this rejected money; yet Congress insists upon adding to it at the rate of $2,000,000 a month; and the Coinage Committee of that body propose to force it into circulation by paying government obligations in it. In a former letter I pointed out what seem to me the inevitable result of such a policy. It involves an absolute disregard of the most elementary principles of political economy; of all known laws of the creation and distribution of wealth. Mr. Editor, is it ignorance, or is it depravity, or is it a composite of the two?—the foul offspring of a foul union that suggests this tampering with a nation's finances, and recklessly jeopardizes its prosperity!

In a country like ours, young and growing, with new conditions of development constantly appearing, with fields without parallel for the employment of capital and labor, and, too, with temptations to transfer the operations of these forces too rapidly from one enterprise to another, occasional disturbances must come. They are incidental to such a stage in a nation's career, as are certain diseases to childhood. Political wisdom cannot wholly avert these crises, but it can do much to mitigate their effects and lessen their severity.

This letter has grown too long to admit of a discussion of the second and third propositions specifically. I will simply add that I believe gold, more than any known commodity, fills the requirement of stability, and is, therefore, best adapted to the purposes of a circulating medium. A paper currency, redeemable in gold upon demand, is both convenient and safe. With regard to the third, I call attention to the panic of 1873, and those subsequent open conflicts between capital and labor called "the strikes," which involved such destruction of property and life. Those troubles had their origin in an unstable and depreciated currency. No one can deplore more than I do those violent and dreadful manifestations of popular discontent, yet experience shows that there are certain conditions that never fail to produce them; and it is a terrible thing to confront a maddened and an outraged people. The silver people might reflect upon this fact with profit to themselves as well as others.

Respectfully, L. E. G., JR.

Richmond, Va., February 13.

PROFESSOR SUMNER ON MONETARY SCIENCE.

To the Editor of BRADSTREET'S.

DEAR SIR—I read in your issue of to-day, in a letter from Mr. H. C. Adams:

> Second, public sentiment is a fact of which legislation must take account, and in the presence of strongly-marked conflicting sentiments it frequently occurs that judicious compromise is all that either party can hope or expect. To one who holds that the money laws in political economy are independent of a nation's sentiments, as expressed in its legislative enactments, this is foolishness; but to hold such an opinion is evidence of the error of reasoning from premises without an appeal to facts.

This is a good specimen of a kind of combined gibe and argument of which there is a great deal going about. For once I should like to just examine it, and show that the argument is a confusion in logic and the gibe unfounded, and, therefore, unbecoming. It is very much the fashion to mix things up and then deride or sneer at those who will not mix things up. To say that one has neglected facts is to make a very serious charge against a scientific man.

I am one of those who believe that the "money laws in political economy are independent of a nation's sentiment as expressed in its legislative enactments," and I believe that I understand the opinions of others who are of the same way of thinking. We do not consider it foolishness to say that "public sentiment is a fact of which legislation must take account." On the contrary, we maintain that legislation has to deal with expedient measures for dealing with the consequences of old political blunders, and with prejudices, traditions, fashions, etc. This has nothing to do with the laws of money as deduced by science. Nature's forces get their full effect. If a nation does not understand those laws, and will not conform its legislation to them, we must get the best legislation we can; but every error and ignorance will involve an

inevitable penalty. Otherwise, what do we mean when we talk of wise or unwise legislation, of sound or unsound statesmanship?

Mr. Adams' first sentence is about political expediency. In his second he changes his ground to that of monetary science, then he mixes the two, and, finally, accuses the school of scientific economists of an "error" and of neglect of "facts." What error? The error of not confusing politics and science as he has done. What facts have they neglected? The only facts referred to are political and not economical. It would have been an error to take them in. We should gain a great deal, both in politics and science, if we would talk politics when we mean politics and science when we mean science.

Thus it appears that the scientific economists have made no error, but have avoided one into which Mr. Adams falls and invites them to follow him, and the correction which he addresses to them reacts—shall I say in a rebuke?—upon himself.

Very respectfully, W. G. SUMNER.

New Haven, February 10.

REVIEWS.

*FENN ON THE FUNDS.**

The standard statistical work, the conventional title of which is given above, rewritten and revised to latest available dates, has been issued from the press of Effingham Wilson, London. It will form an addition to every library containing works of standard economic value. As may be inferred from the title given in the foot-note, the work deals mainly with the liabilities and resources of nations. In addition, are included details of imports and exports, population, areas, railway guarantees, and all descriptions of government, provincial and corporate securities held and dealt in by investors in London, Paris and other leading stock marts. Further than this, the subject of municipal indebtedness and "banks of all nations" are considered. A comparison of this, the latest edition of the work, with the preceding or twelfth edition, bearing date 1876, reveals a marked improvement. The current volume is largely printed in bolder and better type, and manifests a clearer and more comprehensive grasp of the work in hand. General characterizations of the financial conditions of various nations are ably and clearly set forth, and the labors of detail and generalization are handled so as to render the context of interest to even the layman in statistical research. The author, who has also been favorably known by his work on the staff of the London *Economist*, presents an "introduction" which is a model. Here the masses of detail embodied in the statistics relating to the debts and resources of empires, kingdoms, colonies, republics and dependencies are summarized, and the net results of the investigation set forth in a manner quite within the range of even Mr. Matthew Arnold's definition of lucidity. Some of the points and conclusions are worthy of a general consideration, and we take pleasure in presenting them.

The fact is brought to the surface that during the past twenty years the government debts of the world have grown from $13,000,000,000 to $27,000,000,000 (calling £1 $5), but that the character of these debts has greatly altered. Twenty years ago the great mass of the national debts were "internal," *i. e.*, incurred to carry on wars or to cover revenue deficits. The comparatively modern system comes more nearly under the head of "loans for reproductive purposes." For this reason "some states are now found to be bearing easily an amount of apparent burdens which twenty years ago would have been simply everwhelming." Under the old custom of borrowing to pay the cost of wars or deficits every dollar paid had to be ultimately raised by taxation. The more recent system, however, provides of its very nature a source of revenue. The distinction pointed out is found to be steadily maintained throughout the pages of "Fenn on the Funds," and throws a new light on the relative ability of various nations to liquidate their indebtednesses. The decrease in the rate of national borrowing during the past ten years as against the gain in liabilities recorded during the preceding decade has been a feature. Illustrative of this the following aggregate of national liabilities will prove serviceable:

	1862.	1872.	1882.
British debt	£820,000,000	£790,000,000	£763,000,000
British colonial debt	135,000,000	185,000,000	310,000,000
Foreign gov't. debts.	1,650,000,000	3,630,000,000	4,321,000,000
	£2,605,000,000	£4,605,000,000	£5,394,000,000
Ten years' increase		£2,000,000,000	£789,000,000

—or, 17 per cent. from 1872 until 1882, against an increase of 77 per cent. during the preceding decade. The colonial (British) debts increased more rapidly in the latter period than in the former, but the British debt proper steadily decreased. "Other national debts grew" at the rate of but 19 per cent. during the past ten years, against a rate of 120 per cent. in the preceding ten years. The growth of the national indebtedness by wars from 1862 until 1872 was mainly as follows:

The United States civil war	£450,000,000
The Austro-German war	60,000,000
The Paraguayan war	40,000,000
The Franco-German war	390,000,000
Total cost of wars 1862–72	£940,000,000

Thus, these four wars account for one-half of the ten years' increased indebtedness. But in addition the following "New Loans" were floated during that period:

Turkey	£130,000,000	Portugal	£40,000,000
Egypt	70,000,000	Italy	200,000,000
Spain	220,000,000	Russia	110,000,000
Total "new loans" between 1862–1872			£770,000,000

In this manner was it, then, that "other national debts" more than doubled between 1862 and 1872. Another important consideration is that, although the debts were doubled, the quantity of money borrowed by governments in foreign loan markets was more than quadrupled.

The falling away in the rate of increase of national debts from 1872 until 1882 is accounted for in four ways. In the first place the "foreign stock list" on the London Stock Exchange has grown from £2,430,000,000 in 1872 to £3,030,000,000, nominal value, notwithstanding the fact that the bulk of the British holdings of United States government bonds and French rentes (purchased after the Franco-German war) have been returned. This marvelous increase in foreign loans in London was checked in 1875, when the market values of foreign government bonds both at Paris and London fell seriously, and therefore decreased loans at those money centers. In the second place, but one costly war has occurred since 1872, that between Turkey and Russia. It cost Russia 1,200,000,000 roubles, but so reduced the exchangeable value of her previous indebtedness that, measured in sterling, there has not been the increase in the Russian debt that might have been expected. The war cost Turkey practically nothing so far as national indebtedness is concerned. It was carried on by forced levies, and although representing direct losses to the people does not figure in the government burdens. The third and last cause of the decrease of national debts during the past decade is given under the head of "reduction of debts effected by compositions:"

Colombia (say)	£4,500,000	Spain	£185,000,000
Greece	3,750,000	Turkey	84,500,000
Louisiana	1,000,000	Venezuela	4,000,000
North Carolina	2,400,000		
Total			£285,200,000

In addition to the above "reductions" of national debts there were, during the period named, £100,000,000 of indebtedness liquidated by the United States, and about £1,080,000,000 by other nations.

The foregoing, of course, take no account of local borrowings, statistics concerning which are less available. Sufficient is known, however, to indicate that the local debts of the old world have been doubled in the past ten years. It is added that "in the United States," as well as on the continent, "the creation of local burdens has displayed noteworthy activity." "At the present time" (November, 1882), adds Mr. Nash, "the city and county loans of the United States must considerably exceed £200,000,000." A considerable amount of space is given over to these local debts, of which the noteworthy remark is made that they "are, almost the whole of them, the creations of the past ten years."

Some of the statistical results of the work, as applied to British and colonial national indebtedness, are summarized in the following table:

	1873.	1882.	† *Increase or* * *Decrease in nine years.*
United Kingdom—			
Population	32,100,000	35,246,562	†3,146,562
Revenue	£76,608,770	£85,822,282	†£9,213,512
Expenditure	£70,714,448	£85,472,556	†£14,758,108
Public debt	£785,000,000	£763,045,940	*£21,954,060
Debt per capita	£24 10s.	£21 12s. 11d.	*£2 7s. 1d.
British Possessions—			
Population	202,399,786	213,689,440	†11,298,654
Revenue	£71,677,051	£103,577,145	†£32,500,094
Expenditure	£71,513,213	£102,021,955	†£30,502,742
Public debt	£188,428,262	£310,594,456	†£122,166,194
Debt per capita	£6 18s. 7d.	£1 9s.	†£0 10s. 5d.

—showing a gain of over 10 per cent. in population in the United Kingdom and Ireland in the decade 1872–82, an increase of nearly 13 per cent. in revenues and about 20 per cent. in expenditures, with a falling away of about 2.8 per cent. in public indebtedness and about 9 per cent. in per capita indebtedness. The British colonies, however, have not only enjoyed an increase of 5½ per cent. in population, about 45 per cent. in revenue and 43 per cent. in expenditure, but a gain (instead of a decrease) of about 65 per cent. in national indebtedness and about 55 per cent. in debt per capita.

Mr. Nash calls to mind the entire inadequacy of the "percentage of indebtedness per head of population" as a measure of national solvency, as commonly shown in elaborate tables prepared on that basis. This is at once perceived when one compares the statement concerning Honduras (nearly $20,000,000 of national debt, $970,000 annual revenues and $855,000 yearly expenditures, the annual per capita indebtedness being £19 14s.) with that of the United Kingdom, which shows £21 12s. 11d. per capita indebtedness. The relative solvency of the two is not to be brought into question, yet the per capita indebtedness renders Honduras apparently the better able to pay its debts. The missing link in determining the relative solvency of different nations upon the per capita indebtedness basis is, of course, the impossibility of stating the actual per capita wealth of each and average per capita interest charges of each on outstanding national liabilities. The point is well made also "that the nominal capital (amount) is no adequate measure of a nation's debt," for it is certain that the money burden entailed by £1,000,000 of British 3 per cents should only be reckoned at one-half of that of a like amount of Argentine 6 per cents. After having elaborated this method of comparison by adjusting the principal national debts to a 5 per cent. interest-bearing basis, Mr. Nash deducts that portion of each covered by "net earnings" (national) and tabulates the balances "to be covered by taxation." This suggests the column of amounts "per head to be covered by taxation," with which he compares the "annual exports per head" of the various countries. As may have been inferred, his argument goes to show that "there is perhaps no better available test of a nation's wealth than its foreign trade," for, as a rule, countries which are rich "have those things which other nations covet, and countries which are poor have not." This test is not regarded as perfect, inasmuch as some countries engage mainly in the transit trade and in others a protective policy checks foreign trade or forces the inhabitants into industries calculated to supply only the home market. Yet, the test applied in the table last referred to proves it in the main a fair one. The liabilities of Honduras are hopeless, and her annual export trade is the lowest (less than 1/34) as compared to the total debt. New Zealand, Queensland, Uruguay and Honduras appear by this exhibit the most hopelessly indebted nations, and it is a matter of common repute that the two last named have been unable to meet their indebtedness. In further consideration of the subject, the proportion of "productive indebtedness" receives extended consideration, as it naturally enters into the discussion of the relative solvency of nations. This and national unsoundness, from the investor's point of view, due rather to political and social disturbances than other causes, constitute the final elements mentioned as entering into the interesting comparisons made. To investors in government securities, as well as to all interested in an investigation or a study of national debts, the book is indispensable.

*Fenn's Compendium of the English and Foreign Funds, Debts and Revenues of all Nations, etc., etc. Thirteenth Edition. Entirely rewritten, and brought down to the latest date, by Robert Lucas Nash, London. Effingham Wilson, publisher. 1883.

LEGAL NOTES.

The question whether a person, not a subscriber to a mercantile agency, can maintain an action against another person on the faith of representations made by that person to the agency, and taken advantage of by the non-subscriber, was considered in the case of Sohn vs. Freiberg et al., decided by Judge Maxwell, in the Cincinnati Court of Common Pleas, on the 6th inst. The action referred to was brought against Henry Freiberg and Julius Freiberg, as partners, under the name of H. Freiberg, to recover the value of three notes, amounting to $6,400, and signed "H. Freiberg." The fact of the alleged partnership was denied by Julius Freiberg. It appeared from the evidence that the defendant, Julius Freiberg, was visited by a reporter of the Bradstreet Mercantile Agency, who asked him, on behalf of the Agency, whether he was in partnership with his brother. He answered that he was, and the report thus obtained was communicated to the Agency. Some time afterward the plaintiff took a note of Henry Freiberg to the First National Bank of Hamilton for discount, and being asked by the cashier whether Henry Freiberg was good, answered that he thought he was; that he understood that Julius was interested in the business, and that if that was so he was undoubtedly good. The cashier wrote to Bradstreet's, inquiring as to the standing of Henry Freiberg, and as to the fact of the partnership, wording the inquiry as for the bank, which was a subscriber to the Agency. The plaintiff, it appears, was not a subscriber, although he was a stockholder and an officer of the bank. In answer to the inquiry of the bank, Bradstreet's sent the report referred to above, which was handed by the cashier to the plaintiff. The plaintiff asserted that, relying on the statement made by Julius Freiberg to Bradstreet's reporter, he sold Henry Freiberg certain quantities of leather, for which the notes in suit were taken, and his counsel claimed that Julius was estopped by reason of that statement from denying that he was a partner with his brother. The court said that the case was to be determined on the general doctrine of estoppel that if one voluntarily holds himself out to a third person or class of persons as the partner of another person, and that third person, or a member of that class, deals with that other person on the faith of such holding out, the person so holding himself out will be estopped from denying that there was in fact such a partnership, and the holding out need not be directly to the person to be induced to rely upon it. The court held that in this case Julius Freiberg was bound by the answer he made to Bradstreet's reporter, and must be considered to have intended, in making that statement, to hold himself out to all the subscribers of Bradstreet's Agency as the partner of his brother Henry. In such a case, however, the court continued, "the holding out is limited to the class of persons for whom it was fairly intended, and a stranger, or one not belonging to that class cannot avail himself of it." In this case, as it appeared, the bank had made the inquiry and turned over the information to the plaintiff, who was not a subscriber, without any authority, against the terms of their contract and against the express instructions on the face of the report. It was an unauthorized communication to the plaintiff of the information which Julius Freiberg had given to the Agency, and the plaintiff could not avail himself of it.

The Albany *Law Journal* has a note of the case of The Corn Exchange Bank vs. The Nassau Bank, decided by the New York Court of Appeals on the 16th ult., and which involved a consideration of the law in relation to the payment of forged checks. It appears that on a certain day in 1874, the firm of K. & Co., being depositors with the plaintiff bank, made their check upon it payable to the order of H. and W. On the following day this check, purporting to be indorsed by the payees, was presented and was paid by the plaintiff to the defendant bank and charged to the drawer's account. About a year and a half afterwards K. & Co. notified plaintiff that the indorsement was forged, and brought suit and recovered judgment for the amount withheld from them on account of the check. Notice of this suit was given to defendant, and after payment of the judgment, plaintiff demanded repayment of the amount so paid, and on the defendant's refusal brought this action. At the trial the defendant set up that its position had been altered to its injury by reason of the failure of the plaintiff and K. & Co. to discover the forgery and notify it, defendant, thereof. A verdict was directed for plaintiff in the court below for the amount of the judgment recovered by K. & Co. against plaintiff, together with plaintiff's expenses in defending the action, and interest on the judgment. The Court of Appeals held that plaintiff was entitled to recover the money paid by it to the defendant upon the check, and interest, but not the expenses and costs of defending the suit brought against it by K. & Co. The court took the view that plaintiff, being induced to part with its money without consideration, defendant, who received it, was bound to make restitution. It was not plaintiff's duty to examine and ascertain the genuineness of the payees' indorsements before paying the check. On the other hand, the plaintiff paid the check at its own risk and without authority, and could have no defense to the action against it. It was the business of plaintiff, as between itself and its depositors, to see to it that their money should not be expended except as they directed, and having failed to do so, it could not charge the expense of an action caused by such default upon a third party. The court held also that it could not be shown that by usage among banks in the city of New York, where both parties were located, it was the duty of the plaintiff to examine and satisfy itself as to the genuineness of the payees of the check, and return the same immediately if not good. This would be evidence of a local usage in contradiction of a general principle of the law merchant and could not be received.

The doctrine that, as against a principal, a third person dealing with an agent individually is put upon inquiry as to the validity of acts done and representations made by him, for his own interest, though apparently in his capacity of agent, was developed in the case of Moores vs. The Citizens' National Bank of Piqua, tried in the United States Circuit Court at Cincinnati on the 8th inst. It ap-

peared that the defendant's cashier, desiring to borrow money, represented to the plaintiff that he owned a considerable amount of the defendant's capital stock, and promised to transfer to her a certain number of shares on the books of the company and to issue a certificate to her therefor in return for certain advances to be made to him. He made out a certificate in the usual form, upon the faith of which plaintiff advanced to him certain sums of money. It was admitted that although the books of the company showed the cashier to be the owner of a number of the shares of the capital stock of the defendant, yet that they had been transferred and hypothecated by him to others; that in point of fact he did not own any of the stock, and that the making and issuing of the certificate was without authority from or any consideration to the bank and without any knowledge on the part of any officer or director of the same. This suit was brought upon the certificate given by the cashier, for the loss sustained by plaintiff by reason of the spurious and fraudulent character of the certificate. Judge Baxter directed a verdict for the defendant on the ground that the cashier in his negotiations with the plaintiff acted for himself and not as the agent of the bank; that when assuming to borrow money he was acting in a matter in which the bank had no interest, and therefore that it could not be affected by anything he had promised or said as an inducement to make the loan. In regard to the points made by plaintiff's counsel, that the acceptance and cancellation of surrendered certificates and the transfer and issuance of new ones was within the scope of the cashier's authority, and that the issuance by him of the certificate upon which the action was based was an official act, Judge Baxter said that even though it might be conceded that money loaned by an innocent party upon the faith of such a certificate might be recovered from the bank, yet that the plaintiff was not an innocent person within the technical meaning of the law. She knew that in issuing the certificate the cashier was acting for himself; that knowledge was enough to put her on inquiry. If she had made the inquiry which the law under the circumstances of the case required of her the loss complained of would have been avoided. The neglect to make the inquiry divested her of the legal rights and incidents pertaining to an innocent holder of the stock.

In the case of Wisener vs. The Bank of Gallatin, decided by the Supreme Court of Tennessee on January 27, it was held that a bank-book in which the cashier set down the amount of money put in the bank by the depositor and the date when the money was deposited is not such a contract or receipt as cannot be contradicted by parol testimony. It was not, the court said, a contract in terms, nor was it intended to be such. It more nearly corresponded to the meaning of the word "memorandum," a record of something to be remembered, a note to help the memory. The court, taking this view of the case, applied the general rule of evidence relating to documents of this character, and held that the book or memorandum was merely *prima facie* evidence of the fact recited by it and not conclusive, and, therefore, that its recitals might be explained or contradicted by oral testimony.

In the case of the People vs. Russell, decided January 10, the Supreme Court of Michigan held that, although state legislation interfering with the rights conferred by letters patent under United States law is void as an invasion of national authority, yet a municipal ordinance requiring peddlers to obtain a license is no such interference, even though the peddler be the manufacturer and patentee of the articles sold. Judge Cooley, in giving the opinion of the court, remarked that the ordinance in question did not assume to interfere with, or in any way to abridge, the exclusive rights to which the patentee might lay claim under his patent, but was simply a police regulation made under the general police authority of the state. He classed it among the customary regulations of business, and held that it was entirely competent for a state to confer upon a city the power to pass such an ordinance.

In an action brought by the government against Isaac N. Phelps and Anson Phelps Stokes, as members of the banking firm of Phelps, Stokes & Co., to recover taxes on their capital, and in which the firm proved that only part of their capital upon which the government sought to levy a tax was invested in the banking business, Judge Brown, in the District Court of the United States for the Southern District of New York, decided on the 9th inst. that only the capital of a banking association or firm actually employed in the banking business was liable to taxation by the government.

BUSINESS NOTES.

Current statistics place the annual maple sugar product of Vermont at 35,000,000 pounds, or over 15,000 tons, and the yearly production of the same in all other states of the Union at about 5,000 tons. This furnishes an annual supply of but 20,000 tons, a quantity considerably less than that which is sold here each year. As advertisements say, "These facts speak for themselves."

Not much has been heard recently from the English colony at Rugby, Tenn., which at one time during the past year was openly admitted to be a failure. The Chicago *Times* is responsible for the statement that "there is a revival of interest in the English colony at Rugby, Tenn." The only explanation put forward in support of this is that a fruit-canning factory was started there last fall, which made a home market for garden products.

A number of experiments have been made of late in examining the fracture of steel and iron by the aid of the microscope. It has been found that in a strong light, and by the aid of a good glass, the fracture of good steel reveals octahedral crystals, the shape of each being that of two pyramids placed base to base. As the carbon decreases the pyramids become flatter, until the cubial form of cast iron is reached and the flattened forms of wrought iron. It is due to this peculiarity of the structure of wrought iron that it has the capacity of being welded, and thus producing fiber. Between these extremes may be found a graduated series of pyramidal forms, more or less elevated, according to the quality of the metal.

The cost of the English channel tunnel has been estimated by Sir Edward Watkin. He is now constructing a tunnel "somewhere" through one of the hardest stratified rocks known, and finds the cost to be £38 per yard, or, roughly, £65,000 a mile. The channel tunnel will be about 24 miles long. Sir Edward goes so far as to admit that it may cost £100,000 per mile, or for the whole work £2,400,000, or nearly $12,000,000, certainly a small sum when gauged by the contract prices paid for various expensive and important public works in the United States. The *Pall Mall Gazette*, in commenting on these figures, calls to mind that the above does not include the cost of fortifications at the British end of the tunnel, which the builders will have to stand.

The London *Globe* states that the important industrial intelligence has been received that M. Ditman, a Swede, in the employ of Nobel Brothers, who monopolize the Caspian petroleum industry, has invented and patented a "process for solidifying kerosene" and returning it again into its natural or original form. M. Ditman made known what he could do, in scientific circles in St. Petersburgh, about a year ago, whereupon the Messrs. Nobel engaged him and carried him off to their works on the Caspian. It is first proposed to make kerosene candles at the Nobel works, which, it is said, can be shipped to all parts of the continent and sold at prices which will undersell any candles now in market. The success of M. Ditman's process will revolutionize the Messrs. Nobel's enormous carrying trade, which at present employs a fleet of tank steamers and thousands of tank cars, inasmuch as solid "petroleum" will be transported with much greater facility and more cheaply than in liquid form. But the desired result has not been fully accomplished yet.

The First National Bank of Johnstown, N. Y., has elected James Younglove president in place of J. Stewart. The Phenix National Bank of New York city has elected Eugene Dutilh president in place of P. M. Bryson. The Mechanics' National Bank of New York has elected Alex. E. Orr vice-president. The First National Bank of Freehold, N. J., has elected J. T. Laird president in place of J. B. Rice. The First National Bank of Indiana, Pa., has elected D. S. Porter president in place of S. M. Clark. The First National Bank of Chelsea, Vt., has elected J. B. Bacon president in place of S. Ely. The First National Bank of Francestown, N. H., has elected N. L. Morrison president in place of J. D. Butler. The Great Falls (N. H.) National Bank has elected A. A. Perkins president in place of D. H. Buffum. The First National Bank of Fairfield, Me., has elected Nahum Totman president in place of H. Kelley. The First National Bank of Marlboro, Mass., has elected Samuel Boyd president. The First National Bank of Garrettsville, Ohio, has elected W. B. McConnell president in place of W. C. Thrasher. The First National Bank of Georgetown, Ohio, has elected Joseph Cochran president. The Hocking Valley National Bank of Lancaster, Ohio, has elected H. C. Drinkle president in place of T. Mithoff. The Morrow National Bank of Mount Gilead, Ohio, has elected William G. Beatty president in place of M. B. Talmage. The First National Bank of Monroeville, Ohio, has elected S. D. Fish president. The San Miguel National Bank of Las Vegas, N. M., has elected M. S. Oten president in place of M. A. Oten. The Second National Bank of Morgantown, W. Va., has elected E. Shisler president in place of G. W. John. The People's National Bank of Martinsburg, W. Va., has elected A. G. Thomas president in place of E. L. Troxell. The First National Bank of Nevada, Iowa, has elected R. J. Silliman president in place of E. L. Lyon.

Fire-proof paints or coatings for wood have long occupied the attention of various investigators, but heretofore no genuine success has been scored. A preparation of asbestos has been made for this purpose, but it is not weather-proof, and is used mainly for interiors of factories and shops, although largely for more extended uses in the south. A French journal, *La Papeterie*, describes a newly-invented fire-proof paint as "consisting of 20 parts of finely pulverized glass, 20 parts of finely pulverized porceiain, 20 parts of any sort of stone in powder, 10 parts of calcined lime, and 30 parts of silicate of soda found in commerce. The solid elements, having been powdered as fine as possible and sifted, are moistened and then intimately mixed with the silicate of soda. This yields a mass of sirupy consistence that may be employed for painting, either alone or mixed with color. The first coat hardens immediately, and a second one may be applied six hours or more afterward. This paint may likewise be employed as a preservative against rust and used as a coating for iron bridges, etc.

The following national banks have been organized: The Central National Bank of Cambridge, Ohio; capital $60,000; Andrew J. Hutchinson president, W. E. Boden cashier. The National Bank of Troy, N. Y.; capital $200,000; Thomas Coleman president, George H. Morrison cashier. The City National Bank of Dayton, Ohio; capital $200,000; Simon Gebhart president, G. B. Harman cashier. The Freeport (Ill.) National Bank; capital $120,000; O. B. Bidwell president, A. H. Barshinger cashier. The First National Bank of Yakima, W. T.; capital $50,000; Joseph R. Lewis president, Edward Whitson cashier. The National Bank of Oshkosh, Wis.; capital $200,000; S. M. Hay president, Charles Scriber cashier. The Peoria (Ill.) National Bank; capital $150,000; Charles P. King president, George H. McIlvaine cashier. The First National Bank of Wellington, Kan.; capital $50,000; George W. Baird president, George M. Miller cashier. The Utah National Bank of Ogden, Utah; capital $100,000; John W. Guthrie president, Richard M. Dooley cashier. The First National Bank of Mexico, Mo.; capital $50,000; R. W. Tureman president, R. R. Arnold, cashier.

An official copy of the Annual Report for 1882 of the Albany (N. Y.) Board of Lumber Dealers, shows that a large quantity of various qualities of lumber have been handled in that market during the past year. Inasmuch as the exhibit contains no comparative statistics, the relative importance of the year's business does not appear. The total stocks of white pine lumber on hand at Albany, January 1, 1882, amounted to 96,917,829 feet, and on January 1, 1883, to 101,258,658 feet. The total sales of white pine during the calendar year 1882 amounted to 352,673,700 feet. The year's receipts were 453,932,358 feet. The stocks of Norway pine increased from 1,077,260 feet, January 1, 1882, to 2,988,072 feet on January 1, 1883, the sales amounting to but 311,010 feet during the year, and the receipts to 3,299,082 feet. The stocks of spruce increased from 3,186,639 feet to 3,624,274 feet, but the sales were 46,602,100 feet, the total receipts having amounted to 50,226,349 feet. The stocks of hemlock grew from 725,104 to 1,137,183 feet; the receipts were 33,995,963 feet, and the sales were 32,858,780 feet. The stocks of white and hard woods were decreased on the year from 3,567,327 to 3,248,751 feet; the receipts amounted to 11,203,388 feet, and shipments to 7,954,637 feet. Considerable business was also done in pickets, laths, clapboards, shingles, and dressed ceilings. The total sales in 1882 "of measured and tally lumber" amounted to 440,400,227 feet, and the aggregate of stocks on hand January 1 last was 112,256,938 feet, against something over 106,000,000 feet on January 1, 1882, a gain in stocks on the year of about 6,000,000 feet of lumber.

The census report on the manufacturing industries of the United States, "by states," has been published in a preceding issue of BRADSTREET'S. In Bulletin No. 304 the industrial statistics of the country are again given, this time classified separately instead of being credited in bulk to particular states and cities as in previous reports. The reports of "cotton goods," include, of course, first, specific cotton goods, and, second, those made in part of cotton but not sold as cotton or woolen goods. Under "dyeing and finishing textiles," those attached to cotton, silk and woolen factories are not included. The "values of products" of this class represent merely the "added value" by the operations of such establishments, and the value of the unfinished goods are not included under the head of "value of materials." In statistics of leather curried and leather tanned establishments carrying on both these branches of the industry are duplicated under the head of "number of establishments." The statistics of the ship-building industries do not include those of the government navy yards, and the details of slaughtering and meat packing do not refer to retail establishments. Steam railway car manufacturing and repair and other enterprises are omitted from the exhibit, as are also the statistics of fishery products, gas manufacture, petroleum refining, mining and quarrying. Every industrial bulletin received from the Census Bureau thus far has been chiefly remarkable for a number of important omissions. While gratifying a desire to know of some of the results, it would be interesting to know why the six exceptions noted were not ready and included. The grand totals of the national industries are unattainable without them.

The daily papers have been filled during the past week with accounts of the terrible disasters to life and property caused by the flood in the valley of the Ohio river, particularly at Cincinnati and Louisville and neighboring towns. Just when the water had reached an exceptionally high mark—something over sixty-four feet—signs of a fall appeared. About that time a warm and steady rain set in, which caused a further rise, as has since been reported. It is not the purpose of this paragraph to discuss the loss of lives and property, or to consider the probabilities as to the amount of growing grain supposed to have been ruined in the Ohio river valley by the floods in that region. The unprecedented character of the rise in the waters of the Ohio, however, is fully borne out by the "Thirty-fourth Annual Report of the Cincinnati Chamber of Commerce," compiled by its secretary, Mr. S. D. Maxwell, advance sheets of which have just come to hand. This report includes the period from September 1, 1881, to August 31 in the following year, inclusive, and in its discussion of "The River," it is remarked that the year concluded with the date last named brought the "highest annual stage of water and the lowest stage embraced within the period of public records." The period of navigable waters during the year was of usual length, but Cincinnati's river business was diminished owing to the partial failure of the Louisiana sugar and rice crops, reduced crops of cotton and grain, the strike in the Pittsburgh and Wheeling iron districts, the discontinuance of the Ohio & Chesapeake transportation via the Ohio river, and the general overflow during the late winter and early spring of 1882 in the lower valley of the Mississippi river. There were several offsets to these drawbacks, however. Among them were the better understanding among river boats as to rates charged, an increase in the up-river passenger trade, and closer connection and more regularity in running by railways and river boats which interchanged freight and passengers. Beneficial results were also attained from the improvement made by the general government in the navigable character of the stream. Low water ushered in the commercial year, and previously, on July 12, 1881, only small boats could run. September 18, the lowest stage of water on record was reached, viz., 23 inches. During September and October the height of the water averaged 3½ feet. On November 3 the low water period culminated, after which navigation from Pittsburgh to the gulf was not interrupted for want of water. In November the water reached 27 feet, in December 40 feet 10 inches, in January 48 feet 6 inches, and in February 58 feet 7 inches. This occurred on the 21st of that month, and was the highest stage of water at Cincinnati on record, save in 1832 and in 1847. In the former of the two years named the highest water-mark reached was 64 feet 3 inches (on February 18), and in 1847, on December 17, it gained the height of 63 feet 7 inches. On February 21, in 1882, it reached 58 feet 7 inches, and on January 24, 1862, 57 feet 4 inches. The waters of the Ohio have, therefore, been about one foot above the highest on record.

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

To keep the story of the stock market conservative a brief glance back to the opening of the year is necessary. It opened with the public out of Wall street, business quiet in consequence, prices declining, and a scheme on foot among half a dozen leading operators—among whom neither Mr. Keene nor Mr. Gould was included—to work up a "January boom," which should lift stocks on a wave of excitement, bring in the great outside public as a buyer, and enable the combination of "reformed bears" to unload the stocks they had been accumulating at profitable prices. This was the programme, but somehow it did not work. All the arts of manipulation were employed to steam up the market, the combination bought more and more stocks, and still there was a sort of deadlock, and no one could say in what direction it would break—most people looking for it to break downward. In the third week of the month (that ending Jan. 20) the break took place. The market suddenly started into extreme activity, and prices mounted upward. The bull combination was jubilant; the street was all excited; the January boom seemed to have started at last. The next week the whole scene was reversed; some of the stocks most advanced broke down worst, confusion overtook the bulls, prices began to tumble on all sides, and the week closed on a scene of defeat. The interval of Sunday gave the members of the combination a chance to get together and plan a rally, which lasted two or three days and was followed by another break more disastrous than before. This was for the week ending February 3. In the following week, ending the 10th, the members of the combination threw over their large holdings with such haste that at times the market threatened to run into a small panic; last week the liquidation went on more slowly, the cliques having largely relieved themselves of their most distressing burdens; and during the past week the market has been sagging slowly, prices dropping by a few fractions each day, while the position of some of the large operators is found to have changed. Thus the main movement of the market is shown to have been downward, but interrupted by a combined movement to force prices upward and then buy, the fluctuations incident to the struggles of the defeated operators to hold the market while they were selling out.

It has been remarked that there are really no bulls in Wall street now. Even those operators who want to be, having been left with stocks on hand, will dolefully confess on being questioned that there is little to hope for except in patience. February, it is said, is one of the bear months of the year, because in that month we may look for snowstorms, snow blockades, blizzards, accidents from floods and washouts, traffic stopped, decreased earnings, trade checked, and enormous damages to be repaired. This year we are getting our full dose of all. That we should have the whole valley of the Ohio swept by disastrous floods, and at the same time hear of the whole northwest being half buried by frightful snowstorms, is a rare combination of disasters. The snowstorms are all right as to time, but the floods are of untimely birth, and the worst feature of the situation is that there may be another series of floods later on. The present deluge comes from heavy rains along the western slope of the Alleghanies and all down the Ohio valley to the junction of that river with the Mississippi at Cairo; but later on must come the melting of the increased areas of snow in the northwest, and if that should be done by a series of warm and heavy rains then another flood must follow which will spread destruction through the Mississippi valley north of Cairo, and the lower Mississippi valley will get a second deluge. This is a contingency which Wall street contemplates with dismal forebodings. The present is bad enough, and there may be as bad to come. Every disaster which the country suffers is a bear event, and as such operates on the stock market.

The market is also under depression from another cause, viz., the recent deaths of wealthy citizens who were large holders of stocks, and whose influence was in consequence always thrown on the bull side of speculation. The late William E. Dodge and ex-Governor Morgan, not to mention others whose demise has happened within the year or nearly within it, had a very large portion of their wealth invested in stocks actively dealt in on the market. Their holdings will soon be pressed for sale, or at least the street anticipates they will, as have the holdings of other large investors who died a short while before them. Lackawanna, for example, has been declining in price since the death of Mr. George Osgood, who held an immense block of the stock; and Mr. Dodge was another large holder of the same stock. Mr. Osgood's holdings have been disposed of; but to the depression of price their sale has caused must now be added the sale of Mr. Dodge's. It is true, the heirs of the estate may decide not to sell, but Wall street knows that this very rarely happens, and expects, as a matter of course, that when a man dies his stocks will soon come upon the market. Most often their weight is felt upon it while he lies on his sick bed. Mr. Osgood, it is understood, sold most of his Lackawanna while in his last sickness. Ex-Governor Morgan was not an investor to any extent in the coal stocks, but he was a large holder of the Gould stocks. He and Mr. Gould were long co-laborers. It is said that Mr. Morgan was one of the first of the recognized strong men of the street to join hands with him, and neither ever abused the other's confidence. The largest holder of Western Union next to Mr. Gould was the ex-governor. This stock remains as part of the estate, and will have to be sold. He is supposed also to have some large investments in the Wabash securities—stocks and bonds both. These will have to be sold; and the knowledge of this fact has had a depressing influence on the stocks affected. Mr. Gould expressed much anxiety about Mr. Morgan's sickness, and hoped against hope till the last. Wall street also still has an uneasy feeling about Mr. Vanderbilt, and whispers are heard that his friends are gradually selling out all their holdings of the stocks he is known to be carrying, as New York Central, Lake Shore, Northwest, Omaha, Chicago, Burlington & Quincy and Reading. Certainly these stocks have been on the decline of late, but whether from this special cause or from general sympathy with the declining market, is not easy to say.

The drop in the price in Chicago, Burlington & Quincy, which was spoken of last week as unexplained, is now generally understood to be due to sales by Mr. Vanderbilt, who had a block of 25,000 shares, it is said. This is strictly an investment stock, very little traded on the market; but investment purchases are always slow, and the pressure to sell was more than the ability of investors to take. The stock has held on about where it dropped to last week, and by good management on the part of Mr. Vanderbilt's brokers the whole lot may be worked off at present prices; but it must be confessed this is a hard market to sell on. The decline in this stock was supposed to have some relation to the drop in Union Pacific; but such does not appear to have been the case. At any rate, the connection cannot be traced by outsiders, though it may exist. As to Union Pacific itself, the rumors spread around last Friday and Saturday that the "deal" was over and the stock would bound up on a consolidation being made with Central Pacific; they appear to have been spread with a purpose. No such consolidation is possible without Federal authority, and no such authority has been asked. Indeed, there are probably no two connecting systems of railroads in the country whose consolidation would present more practical, legal and financial difficulties than that of the Central and Union Pacific railroads, or from which so little benefit would be derived from their consolidation. The truth seems to be that Union Pacific, having once been well started on the down grade, went down so fast and so far as to disarrange the plans of one or two of the large operators who had been instrumental in depressing it, and they have, since the price fell to 91, been engaged in sustaining the stock. What their ultimate plans may be in regard to it is an open question. It is not cheering to see that Central Pacific shows so little strength. It fell at one recent break in the market to 79, but speedily recovered to 83, and it was supposed that the drop was effected as a "scoop." But it is falling back again, and looks not only as if it would go to 79, but even lower; and this for a 6 per cent. stock, which pays its dividends regularly, is inexplicable, except on the theory that the large holders have been and are selling out. The street is always suspicious, when this occurs, that the selling is done for good reasons, which outsiders learn when the mischief is done. Nevertheless, Mr. Huntington talks bravely of the prospects of the road, and says he would not sell his holdings for less than par.

Loanable funds have been abundant all the week at 3½ to 3 per cent. on call, and lower on government bonds. Foreign exchange continues still so high that, considering how much our exports now exceed our imports, the steady return of our securities from abroad must be accepted as the explanation of these rates. The Bank of England reduced its discount rate on Thursday to 3½ per cent., which brought it into accord with what has been the open market rate for some time past; and this reduction caused the bankers here to advance the posted rate for sixty-day exchange half a point, the rates now being $4.84 for long and $4.87 for demand sterling. Actual rates yesterday were $4.83@$4.83¼ and $4.86@$4.86¼.

In the government bond market there has been no movement calling for note. The closing quotations yesterday were:

	Feb. 9, bid.	Feb. 16, bid	Feb. 16, asked.
U. S. 4s extended (3½ p. c.)	103	103¾	—
U. S. 6½s 1891, registered	112½	112¾	113
U. S. coupon	113⅛	113⅞	114⅛
U. S. 4s 1907, registered	119⅜	119⅜	119¾
U. S. 4s 1907, coupon	119⅜	119⅜	119¾

The bank statement of Saturday was somewhat unfavorable in its showing, and put a temporary damper on the stock market; but the banks are well provided with reserves and could furnish all the funds necessary for a bull market, if it were possible to start one. There was an unexpectedly large expansion in the loans of $5,030,400, and a decrease in the surplus reserve of $1,420,350, which leaves it at $6,419,700, which is $2,368,525 larger than it was a year ago. The following are the comparative totals of the statements of February 3 and February 10:

	February 3.	February 10	Differences
Loans	$316,460,800	$321,491,200	Inc. $5,030,400
Specie	61,625,200	62,402,500	Inc. 797,300
Legal-tenders	23,030,400	21,794,800	Dec. 1,235,600
Deposits	307,182,200	311,110,400	Inc. 3,928,200
Circulation	16,645,200	16,463,700	Dec 181,500

The proportion of total reserve to liabilities is now 27.06 per cent., as against 26.30 per cent. at the same date of 1882.

Our San Francisco correspondent writes as follows under date of February 7: "The bill before Congress for the consolidation of the Southern Pacific and Atlantic & Pacific railroads is being opposed in this state by all outside railroad interests. If passed by Congress it is argued that it would remove the railroad corporation from the jurisdiction of the state courts—the Southern Pacific at least—and preclude the possibility of taking this franchise as property, which is made mandatory by the state Constitution. The railroad company is exerting its influence to postpone action by the state Legislature on a joint resolution against the bill until it has been rushed through Congress. It is difficult to say what the outcome will be."

By Telegraph from New Orleans, La.—Premiums ⅜ points lower. Hard bull and bear fight on gas, which dropped 3½ points. Inside; Union old and new gas companies are generally considered very fishy. Cards and counter-cards have been published. The Southwestern Brush Electric Light Company has declared quarterly dividends of 2 per cent.

COMMERCIAL.

The dispatches to BRADSTREET'S this week from the leading trade centers of the country reveal that the severe floods in the west have had a depressing effect upon trade over a far wider extent of country than the area flooded. In consequence general trade is dull. Advices from the principal business centers indicate advancing interest rates. The situation in the cotton trade continues to be an expectant one. Speculation is at a standstill. Both sides are awaiting evidence as to the exhaustion of the crop. Wheat has advanced from 4c. to 5c. per bushel in the last few days in view of the reports of damage to winter wheat in Indiana, Illinois and Missouri, the decrease of arrivals at western points and the continued upward tendency of the foreign markets. Corn has advanced from 1½c. to 2½c., partly in sympathy with the advance in wheat. Provisions have remained dull but firm, in sympathy with corn. There is no improvement in the iron market as a whole. In pig iron there is no change for the better whatever. Contracts for season delivery of pig iron will undoubtedly be deferred to a large extent until after March 4 and the adjournment of Congress. Season delivery contracts for pig already made are of small totals, nearly all of gray forge iron, all of Pennsylvania iron, and aggregating about 20,000 tons. Plate and tank are improved, but are not yet going off in any considerable quantities. Steel rails remain at $40. But few orders have been taken during the week, and those are of small size. Scotch pig iron has improved considerably during the week. This is due to higher freights from the other side and to a renewed inquiry here. Prices, however, are unchanged. The speculative market for petroleum, since the 9th inst., has been under the influence of numerous reports respecting Grandin well No. 3, on Porcupine creek, in Forest county, Pa. Notwithstanding the fact that the Forest county pools had been well defined and were known to be of limited extent, the handlers of so-called news from the region of Porcupine creek during the past week have been the cause of a singularly successful depression of the market. Yesterday, however, the fact transpired that the Grandin well was unimportant, and prices advanced. The tone of the oil market is now firm. Anthracite coal is quiet and sales made are below nominal quotations. In the west stocks of anthracite are rapidly diminishing. Ocean tonnage for chartering is in fair supply, but the demand is lighter, and rates are therefore easy. Berth rates continue unchanged. The wool trade has been very active at advancing prices. There is a strong speculative feeling influenced by the prospect of a general scarcity before shearing time. There were 221 failures in the United States reported during the past week, 35 less than the preceding week, 49 more than the corresponding week of 1882, and 76 more than the same week of 1881.

BREADSTUFFS.

The foreign markets for breadstuffs are now influenced, not only by the discouraging aspects of the prospects for crops in Europe, but by the situation of affairs in this country aside from speculative influences. The agricultural situation throughout Europe has convinced all foreign operators in breadstuffs that they must during the next year depend more largely upon American supplies than heretofore. Paris advices of the 27th ult. say that "the fact that the American crops do not offer the expected resources, on account of the diminished estimates of the crops in the United States in 1882" had stiffened the French markets. Since the date above mentioned the reports of damage to winter wheat in Indiana, Illinois and Kansas by sleet and storms, and also the news of the disastrous floods in the Ohio valley, have reached the foreign markets, and on Wednesday and Thursday there was an important advance in Liverpool, equal to 1⅞@3c. per bushel for No. 2 spring wheat, off coast and for prompt shipment, corresponding to an advance of average 2½c. per bushel in New York and Chicago. For the time being the situation in the United States has more effect upon the foreign markets than the prospects in Europe itself, though the latter are bad enough. Paris advices of the 29th ult. to Beerbohm's London *Corn Trade List* say: "Field work has continued very difficult and though there has been some improvement with regard to the 'autumn sowing,' as compared with a month ago, the general situation still leaves much to be desired." In regard to the present supplies in the hands of French farmers the reports say: "Farmers have much inferior wheat on hand yet, but it requires the admixture of all the more of higher grades, which are scarce." "It is doubtful, however, if there will be any important surplus in farmers' hands at the time of the next harvest." "Our crop of 115,000,000 hectolitres only represents an average crop."

In England the situation does not improve. The *Mark Lane Express* of January 28 says: "The fuller reports of our correspondents this week unfortunately confirm the most gloomy statements hitherto made in respect to the agricultural situation generally. The gales of Saturday and Sunday night, which have also occurred since these reports were written, have made the situation still more serious, if that be possible. On the clay lands nothing can be done, and time goes on apace. The soil is wet as ever, and there is no better prospect of commencing spring cultivation than a month ago. We hear of whole parishes in which no wheat has yet been sown, and the reports of the early sown wheat are less favorable than they were. On all the autumn-sown crops there is everywhere damage reported from slugs, the trefolium being in some parts about destroyed by them and the clover much injured." These are certainly very gloomy accounts of the prospects of next summer's crops in Great Britain and the continent, and there is the less probability that they may be exaggerated, from the fact that we see that the extraordinary meteorological conditions which have produced those results are not merely local; they are pretty general throughout the northern hemisphere—at least so far as detailed reports have been obtained. This condition of things began earlier in Europe than in America, but the heavy snows in the northwestern states, storms of sleet in Illinois and Kansas, and floods in the Ohio valley, show that this continent has not escaped. The higher latitudes of the wheat-raising belt in the United States seem to have suffered but little, and the same seems to be pretty true also of the more northern countries of Europe.

The stock of wheat at Odessa on January 1 was 6,989,248 bushels, against 6,778,368 on January 1, 1882. It is now estimated that the crop of wheat in Russia in 1882 was larger than in 1881, and consequently that the exports from Odessa after the opening of navigation this year will at least be equal to if not in excess of last year.

The prospects of the wheat crop in Australia and New Zealand are favorable for an average yield.

AMERICAN WHEAT MARKETS.

The wheat markets have continued excited and prices have fluctuated a good deal in the past week, but with a sharp movement upward in the last four days, as will be seen by the following closing figures for March wheat in Chicago, viz.: February 5, $1.06; February 12, $1.06; February 13, $1.07⅛; February 14, $1.09⅞; February 15, $1.09¾; February 16, $1.10¼. In the New York market March wheat was as follows, at 2 o'clock on the dates mentioned, viz.: February 6, $1.20¼; February 12, $1.20½; February 13, $1.21⅝; February 14, $1.24⅞; February 15, $1.25⅝; February 16, $1.24¾. The advance, as will be seen, has been greater in New York than in Chicago, though the difference will undoubtedly promptly adjust itself. It may be said, however, that at Chicago there has been a constant expectation that snow-delayed freights on the railroads would come in in larger quantities almost any day, and this apprehension of a sudden increase of the supply on that market has had some effect to restrain the advance. The entire movement of grain at the west has fallen off very largely. The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis in the week to February 9 were the insignificant total of 375,541 bushels, against 921,272 bushels in the preceding week, and against an average of considerably over 2,000,000 bushels per week in December. The extreme low ebb to which the movement was reduced in the week to February 9 was due to the obstruction of traffic on the railways traversing the principal spring wheat regions, and was exceptional. Immediately after the 9th there seems to have been a resumption of operations on the railways, and the arrivals of wheat at the points above mentioned were 500,000 bushels in the next four days. The arrivals of breadstuffs at the seven principal Atlantic ports also showed an important decrease in the week above referred to, which was partly, but only partly, due to the same circumstances that caused the decrease at the west. The total receipts in the week to February 10 were 172,960 barrels of flour, 848,590 bushels of wheat and 1,847,475 bushels of corn, against 194,892 barrels of flour, 1,028,056 bushels of wheat and 3,040,785 bushels of corn in the preceding week. The whole movement of breadstuffs from the west to the seaboard will now be greatly disturbed by the floods in the Ohio valley and others that are likely to occur in the more distant parts of the west and northwest by the melting of the unusually heavy snows. These features will disturb the markets and make them irregular. But, aside from this, there is reason for believing that the same character of the weather which has produced such unfavorable results in Europe—though coming much later on this continent—has produced to a limited extent some similar results here. The secretary of the Board of Agriculture of the state of Indiana officially announces that advices from various parts of that state show that the alternate freezing and thawing, together with the sleet which has at times covered the ground, has seriously damaged the autumn-sown wheat. The floods in the Ohio valley have also undoubtedly done some damage to the autumn-sown wheat, and, while it is too early yet to estimate the approximate amount of such damage, it cannot fail to be sufficient to have an important effect upon the markets. The total average advance in wheat from the lowest prices of say three months ago has now been from 12c. to 13c. per bushel. Considering that since then the estimate of the crop in the United States in 1882 has been reduced about 20,000,000 bushels, and that all the unfavorable features of weather, both in Europe and this country, have been developed, the advance is not large.

The weekly statement of the visible supply of wheat in the United States (exclusive of the Pacific coast) on February 10, as compared with February 3, shows a decrease of 101,344 bushels.

CORN.

Corn has, to a very limited extent, sympathized with the advance in wheat in the last week or two. But corn was already high before the advance in wheat began. The floods and bad weather of the winter do not affect the prospect for next summer's corn crop, because it may all be planted even as late as next June and still raise a fair crop. The arrivals at the principal western points have, however, been diminished by the same causes. The total at the seven principal western points above named, in the week to February 9, were only 1,258,421 bushels, against 3,045,314 in the preceding week, and 1,164,755 two weeks previous. In the New York market corn for March delivery was 71c. on February 6 and 74c. on February 15, and in Chicago was 56⅞c. on February 6 and 57½c. on February 15. As in the case of wheat, the advance has been less in Chicago than in New York, and partly from the same causes, viz., apprehensions of a sudden increase of arrivals in the western markets.

The weekly statement of the visible supply of corn and oats in the United States (exclusive of the Pacific coast) on February 10, as compared with February 3, showed a decrease of 123,918 bushels of corn and 323,082 of oats.

PROVISIONS.

The provision trade has been dull compared to the grain markets, and prices have changed but little in the past ten days. The receipts of hogs at the principal western packing points have kept up much better than might have been expected under the circumstances of the general delays to the movement of all freights on the railways during the last two weeks. The railway officials at the west have used extraordinary exertions to push trains of cattle and hogs through to their destinations, because if delayed they would perish. The receipts of hogs at Chicago, Cincinnati, St. Louis, Kansas City, Peoria, Indianapolis, Cleveland and Milwaukee in the week to February 15 were an aggregate of 211,421 against 190,670 in the preceding week, and 159,738 in the corresponding week of last year. Packing operations at the principal western points have also been continued on a liberal scale, and stocks of all varieties of hog product are increasing. At Chicago there has been a considerable increase in orders for meats from the south and southwest, but this has been largely on account of the interference of the floods with the usual supplies from Ohio river points. The provision market will to a very large extent sympathize with the prices of corn, and, but for the firmness imparted to both by the floods, would have had a downward tendency.

THE PROVISION MARKETS BY TELEGRAPH.

From Chicago, Ill.: Pork, lard and meats active, influenced by decreased receipts. Hogs short; ribs and sides in large demand for shipments east and south. Little export inquiry, and orders limited below sellers' prices.

From St. Louis, Mo.: The provision market strong on a good demand, but buyers and sellers are apart and comparatively little is changing hands. The cattle market is dull because shippers cannot rely on transportation. Values have a downward tendency. Hog packing progresses rather slow on account of warm weather. Shippers decline to buy heavily now.

From Wilmington, N. C.: Provisions steady.

From Nashville, Tenn.: Cattle receipts still demand good prices, and are very high.

From Memphis, Tenn.: Meats are strong, with prospect of an increase.

THE NEW YORK DRY GOODS MARKET.

Business in the New York dry goods market for the first two weeks of February has been contrary to all expectation. Usually at this season the importing and domestic commission houses are making large sales to interior jobbers, as also to the more extensive firms engaged in the retail trade. The city jobbing trade generally springs up about the same time. This year, however, has been an exception. Trade opened well with the first of the month, but rapidly fell off again. This is, no doubt, largely owing to the continued bad weather both here and in the west. For the past week there has been no improvement over the previous. There is certainly some business doing, but nothing compared with what should be done at this season. Buyers are only purchasing for actual requirement, and there is no "snap" to trade at all. The importations and marketings of dry goods are as follows:

	No. of packages.	*Value.*
Total imports of dry goods during past week	27,989	$3,667,599
Total amount of dry goods, duty paid, for past week	20,323	3,509,471

THE BRITISH COTTON GOODS MARKET.

[By Cable to BRADSTREET'S.]

London, February 16.—The Manchester cotton goods trade has been depressed, although there has been some slight inquiry from China trade. Home yarns are lower.

THE DRY GOODS MARKETS BY TELEGRAPH.

From Portland, Me.: There was a slight improvement in the dry goods trade in the early part of the week.

From Boston, Mass.: The improved condition of the dry goods trade continues, but jobbers are by no means driven with orders, the blockades and floods in the west temporarily impeding the movements of salesmen. Commission houses report a pretty good movement in cottons. There is a fair trade in woolens.

From Providence, R. I.: The print cloth market is quiet and dull, the amount of sales being small; 64s are quoted at 3 13/16c. and 56x60s at 3¼c. There are about 101,000 pieces on hand. The cotton market is very quiet, the sales being moderate. Middling uplands are worth 10¾c., and middling gulfs 11c. There are 6,000 or 8,000 bales on hand.

From Philadelphia, Pa.: The western floods restrict demand from that section, but from other points there is more inquiry at first hands, and the general jobbing trade is improving. Cotton goods are hardening except low grade colored fabrics and ginghams, which are in some cases a shade lower. Woolen goods are selling more freely, as agents are now generally showing fall and winter styles. Prices are low as compared with last year, but the sharp advance in wool is strengthening confidence.

From Pittsburgh, Pa.: The dry goods trade is quiet, but compares fairly with same time in previous years. Collections fair.

From Cleveland, Ohio: In dry goods there is a very fair February trade, and the comparison of volume with last year continues a satisfactory one at this point.

From Columbus, Ohio: The high waters and warm weather has had the effect of making dry goods less active than last week, and collections are also poor.

From Indianapolis, Ind.: The dry goods trade is reported dull.

From Chicago, Ill.: Country collections improving. More small orders for dry goods. Jobbers predict a better trade next week.

From Peoria, Ill.: The dry goods trade is in keeping with preceding weeks of this year, with satisfactory collections.

From Louisville, Ky.: Dry goods are in light demand, with expectations of good spring trade. Grain in good demand, with prices steadily tending upward. Receipts are small, attributable to lack of shipping facilities. Dealers report a fair amount in stock, sufficient for present wants.

From St. Louis, Mo.: The dry goods business only moderate; spring stocks are accumulating rapidly; prices are firm.

From Kansas City, Mo.: Dry goods sales have been very light, and not much improvement is expected until spring opens. Jobbers are now receiving spring goods. Their purchases are generally larger than in former seasons.

From Detroit, Mich.: The dry goods business for the week has been small and mostly in mail orders

From Minneapolis, Minn.: Dry goods are in better demand, and jobbers report a good trade for this month, with prospect of a large spring business.

From Baltimore, Md.: The sales in the dry goods markets the past week were rather light, but unsettled weather is thought to have kept some buyers away, and a larger volume of business is looked for the coming week. Prices of print and dress goods are steady, and sheetings and shirtings are reported firm.

From Norfolk, Va.: Jobbers and retailers of dry goods are doing only a moderate business.

From Richmond, Va.: The dry goods trade is fair and improving daily.

From Wilmington, N. C.: The dry goods jobbing trade is quiet, with a fair retail business.

From Savannah, Ga.: The dry goods trade has been quiet on the 12th and 13th inst., when large sales were made and trade opened with strangers from new sections. Stocks full to meet spring demands.

From Memphis, Tenn.: Wholesale jobbers in dry goods report business a little more active during the past week, with collections satisfactory; money 6 to 8 per cent.; exchange at ¼ premium.

From New Orleans, La.: The dry goods trade has been quieter than last week.

From Omaha, Neb.: The dry goods trade has shown but little improvement over that of last week.

COTTON.

The New York cotton market remains unchanged at 10¼c. for spot middling uplands. The sales for the week have been for consumption 358 bales, and for speculation 200 bales, making a total of 558. Included in the above are 200 bales to arrive.

Below will be found the closing quotations for prompt delivery uplands at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
Ordinary	7 9-16c.	7 9-16c.	8 15-16c.
Strict ordinary	8	8	10 5-16
Good ordinary	8 13-16	8 13-16	10¾
Low middling	9¾	9¾	11 3-16
Middling	10¼	10¼	11⅝
Good middling	10 9 16	10 9-16	12
Middling fair	11 5-16	11 5-16	12¾
Fair	12 1-16	12 1-16	13½

The market for spot cotton closed quiet at unchanged quotations. The future market at New York has been lower, the price having declined an average of 9 points for near months, and 8 points for later months. The sales for the week foot up 310,000 bales, against 1,402,800 bales for the same week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
February	10.22c.	10.28c.	11.58c.
March	10.31	10.39	11.63
April	10.41	10.53	11.79
May	10.58	10.67	11.95
June	10.73	10.81	12.11
July	10.86	10.94	12.24
August	10.96	11.05	12.35
September	10.67	10.73	11.89

The future market at New York closed easy.

The total receipts of cotton at all the ports since September 1, are 4,602,040 bales, which is an increase of 705,777 bales over the receipts of last year for the same time. The total at each port since September 1, is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	637,882	365,008
New Orleans	1,263,439	1,042,524
Mobile	275,391	224,911
Savannah	683,947	646,671
Charleston	483,576	437,771
Wilmington	111,433	121,697
Norfolk	620,044	503,918
Baltimore	43,001	23,418
New York	118,347	135,663
Boston	122,577	155,565
Philadelphia	45,936	37,964
Other ports	217,081	216,293

The receipts at the ports for the week were 144,497 bales, against 163,577 last week and 71,295 for the corresponding week last year.

The receipts at the twenty-four interior towns usually reported were 45,553 bales, against 54,647 bales last week and 20,455 bales for the corresponding week last year. The shipments for the week were 58,000 bales, against 62,986 bales last week and 29,881 bales for the corresponding week last year. The stocks for the week were 304,047 bales, against 314,353 last week and 341,682 for the same week last year.

There has been a moderate inquiry for spot cotton at Liverpool, which has been freely supplied. Prices have declined for middling uplands to 5⁵/₈d. and for middling Orleans to 5¹³/₁₆d.

The sales for the week at Liverpool were 53,000 bales (of which 34,500 were American), against 58,000 bales (of which 46,500 were American) last year. The stock in port is 886,000 bales (of which 633,000 are American), against 700,000 bales (of which 497,000 were American) last year. The total imports for the week were 102,000 bales (of which 83,000 were American), against 114,000 bales (of which 75,000 were American) last year, and the amount afloat 340,000 bales (of which 275,000 were American), against 366,000 bales (of which 232,000 were American) last year.

The Liverpool future market has been in buyers' favor. Below will be found the closing quotations at Liverpool on Friday of middling uplands for delivery:

	To-day.	*Last week.*	*Last year.*
March—April	5 44-64d.	5 48-64d.	6 32-64d.
April—May	5 47-64	5 53-64	6 36-64
May—June	5 50-64	5 53-64	6 40-64
June—July	5 53-64	5 57-64	6 44-64
July—August	5 57-64	5 61-64	6 46-64
August—September	5 61-64	....	....

The Manchester market closed dull and tending downward.

COTTON REPORTS BY TELEGRAPH.

From Columbus, Miss.: The past week has been warm, with rain on six days. Preparations for another crop are much delayed by the weather. Cotton receipts are fair.

wrom New Orleans, La.: Notwithstanding the efforts of bulls to prove the contrary, the favorite cotton crop estimate has been 7,000,000 bales since last week; middling off 1/16c.; closed easy; futures quoted dull, and are off 5 to 18 points. The week's receipts thus far have been 20,883 bales more than for the same week last year.

From Savannah, Ga.: The cotton market has been quiet and steady.

WOOL.

This has been a week of general activity and excitement in the wool trade. Demand has assumed a strong speculative character in all markets, and dealers have been competing with manufacturers for the most desirable lots of fine and medium clothing and worsted wools. Trading has been most active at Boston and Philadelphia, where the assortments available have offered greater inducements to buyers than at other points on the seaboard, but all markets have shared in a marked improvement in demand. Prices have further advanced fully 2c. per pound in some cases, notably on the descriptions above specified. These wools are getting very scarce, and as it is yet about four months to the marketing of the new clip and no considerable supply of competing grades of foreign are immediately available, consumers are disposed to anticipate requirements, and dealers are buying in expectation of a further advance. The general market is 10 to 15 per cent. higher than during the latter part of January. The sales at Philadelphia during the past week have exceeded 2,000,000 pounds for the first time in the history of that market. Foreign markets are tending upward. Orders have gone abroad for large lines of ¼ @ ½ blood English combing wools at 1c. advance on the rates current on the 18th of last month. The colonial sales will open in London in the latter part of February, and will be watched with unusual interest from this side, as it seems almost certain that a considerable amount of wool must be drawn from abroad to meet manufacturers' requirements between this and clip time. The excitement in the eastern markets has been communicated to the country, and holders at primary points are asking a sharp advance for the remnant of the clip remaining in their hands.

IRON.

The iron market maintains the same dull, monotonous tone reported last week, and for similar reasons. There have been a few sales of ordinary brands of pig. Since January 1 there have been probably 20,000 tons of gray forge iron contracted for season delivery, a small quantity. As before stated, season contracts will in all probability be delayed until after March 4, at least. Scotch pig iron is firmer this week than for a number of weeks past, due to advanced ocean freights from Glasgow hither, and to a better inquiry. There is no improvement in prices. The sales have aggregated about 1,000 tons of various brands at current rates, largely of Coltness and Summerlee. The arrivals to last night amounted to about 600 tons, all delivered, having been sold previous to arrival. Merchant bar iron is quiet at previously quoted rates. Concessions can be obtained on cash sales of any quantity. Plate and tank iron are a little improved, but prices remain unchanged at about 2.5c. Steel rails are quiet at $40, with a few small orders placed. No special alarm has been experienced owing to the recent suspension of four or five pig iron furnaces and dealers, as the particular causes governing those embarrassments are well known and do not spring from the temporary depression affecting this industry.

The total production of pig iron in the United States in 1882, as reported by the Philadelphia Iron and Steel Association, was 5,178,122 net tons, or 4,623,323 gross tons, against 4,641,564 net, or 4,144,254 gross tons, in 1881, an increase of 536,558 net, or 479,069 gross tons in the past year, or about 11 per cent. The production, classified according to the varieties of fuel used, was as follows:

	Tons of 2,000 lbs. 1882.	1881.
Bituminous	2,438,078	2,268,264
Anthracite	2,642,138	1,734,462
Charcoal	697,906	638,838
Totals	5,178,122	4,641,564

More pig iron of all varieties was produced in 1882 than in any previous year. The stocks on hand December 31 of the past two years were as follows:

	Tons 2,000 lbs. 1882.	1881.
Bituminous	157,196	36,495
Anthracite	107,259	90,351
Charcoal	165,239	84,050
Total stocks	429,694	201,896

The same authority places the total imports of foreign pig iron in 1882 at 540,000 gross tons. As the home producers had 188,300 tons of the same on hand at the close of 1881, (as against 383,655 at the close of 1882), the probable consumption of pig iron in 1882 was about 4,967,968 gross tons, against a probable consumption of 4,984,565 tons in 1881. The decreased total consumption of pig iron in 1882 was, therefore, about 14,597 gross tons.

THE BRITISH IRON MARKET.

[By Cable to BRADSTREET'S.]

London, February 16.—The transactions in iron have been small. Buyers are waiting to see bottom prices. Quotations are still weak. There is very little speculation in pig.

DOMESTIC IRON MARKETS BY TELEGRAPH.

From Philadelphia, Pa.: The situation has not improved, and there is a good deal of uneasiness among the trade in consequence of recent developments at Washington. The market is unsettled and generally weak. Buyers are holding off or at best operating only for actual requirements.

From Pittsburgh, Pa.: There is a continuance of the inactivity in the iron trade noted last week. Little, if anything, is being done in the pig iron market.

From Cleveland Ohio: The iron markets for the week are essentially unchanged and the trade emphatically without animation.

From Chicago, Ill.: Hardware sales increased 10 per cent. over last week. Pig iron is affected by Rogers' failure; sales mainly small lots; bar, plate iron and nails in moderate demand.

From St. Louis, Mo.: Pig iron is tolerably active, but manufactured is quiet and concessions are made on the rates quoted; the tendency is toward weakness.

From Detroit, Mich.: In iron there is no special change, excepting that prices are firmer at low figures.

COAL.

The week has been a quiet one in anthracite circles. The restricted output was resumed, as per agreement, with the natural effect on stocks at the mines and at shipping points. Advices from the west are to the effect that stocks of anthracite are rapidly decreasing and that the increasing demand for this variety is more noticable than ever. Sales of anthracite during the week have not been conspicuous and prices received were in most instances under the schedule which may be nominally in force. Retail dealers have not yet begun to lay in spring stocks in the New York market and vicinity. There are no changes of note in shipping rates. Bituminous coals are quiet and prices quite low. The outlook is said to be for a satisfactory rate on transportation east from the mines during the coming season. The floods at Pittsburgh and in the Ohio valley, as far as reported to date, did not succeed in in destroying much coal. In this respect the Ohio river coal shippers have been especially fortunate. The production of Pennsylvania anthracite for the week ending February 3 was 370,511 tons, against 469,773 tons in the corresponding week in 1882. Corrected totals of production to February 3, from January 1 (C. R. R. of N. J. to January 31) give a total production for the first five weeks of the year of 2,161,948 tons, against 2,169,595 tons in the corresponding five weeks in 1882.

PETROLEUM.

The manipulation of the news respecting the Grandin well No. 3, on Porcupine run, Forest county, has been done in a masterly manner. In other words, the speculative petroleum market has been successfully juggled during the week. The high-water mark touched by prices of certificates one week ago yesterday, and the firm tone and upward tendency which accompanied them, have been vigorously sponged off the slate bulletin-boards by the bears. The entire speculative interest, especially those who class themselves as "in on the ground floor," have had to conduct themselves during the past week in opposition to their deliberately expressed intentions of one week ago. At the latter date the long list of Forest county gushers and expected gushers had either dwindled to positions of no importance or had come in dry. The general conviction was then expressed that Forest county had been so thoroughly drilled that it can possess no staying qualities as a heavy producing region, and that its wealth of oil exists in pockets, or pools, of limited areas only. This was the view held by operators and speculators at the close of last week, and produced the firm if not active bull market reported at that time. On the top of this we have the unexpected emphasizing of well news and its depressing and reactionary effects on prices witnessed during the past six days.

On Saturday last word was received that the Grandin No. 3 was into the sand and "was showing for a good producer." On the strength (or weakness) of this the market became at once as mercurial as if an own sister to the only original Cherry Grove "mystery" had appeared with credentials and a heavy flow of oil. Fluctuations in prices were rapid, and the drop for the day was 2c. The opening sales were made at $1.03⅞—the highest price paid—the lowest was $1.01¼, and the close was $1.02⅛ @ $1.02¼. The interest excited in the new arrival on Saturday was intensified on Monday by the announcement that the well had been plugged but was leaking through the casing. This strengthened the view that a heavy producer had appeared, and prices were again weakened, the drop for the day being about 4c. The opening price was $1.01⅞, the highest $1.02, the lowest 98¼c., and the closing figure was 98⅜ @ 98½c. On Tuesday the market was allowed to stew, up to three o'clock in the afternoon, without so much as a crumb being thrown to it. The diplomatic managers of oil producing news then exhibited a tempting morsel in the shape of a report that the new well "had made a very large flow for seven minutes." This broke prices from 97⅝c. to 96⅜c. Prices had started off in the morning at 98c., and had got down to 97⅝c., principally through the bear effect of forebodings as to what the news would be, when it came. When the break came, the bears jumped in and began to sell. At this juncture the older and deeper ones made heavy offers to buy, and the market bounded above the dollar mark with such alacrity that very few of those who began to lavishly sell oil under the market had time to recover. Prices closed firm for the day at $1.00⅜ @ $1.00½. Wednesday was an uneventful day, comparitively speaking. No news was received from the Grandin "mystery" No. 3. Prices, however, rather sagged off, and closed at 98¾c., or 1⅝c. below those of the close the evening preceding. On Thursday there was more activity. Prices during most of the day drooped, owing to the announcement that the Forest company's well, near the Anchor well, was "making a good showing." The handlers of data respecting this property, however, did not exhibit the managerial instincts that others might have done, and it was soon reported that this well would

not amount to much. The market then advanced, and closed ½c. over the close on Wednesday, at 99⅜c. The parting salutation from the regions on Thursday evening was that the Grandin well No. 3 would "be bought in" that night.

On Friday the manipulations of the news respecting increased production through the Grandin well No. 3 came to an abrupt end. At least the well was reported of no value, and the market resumed the position it had one week ago last night. It opened at $1.00½ in the morning; trading was active and prices firm. The afternoon session opened at $1.02⅛, and at two o'clock had advanced to $1.03⅛, with the vitality displayed in the morning unabated. At the close prices were $1.01⅝ @$1.01¾, against $1.04 @$1.04⅛ one week ago—a loss of 2⅜c. on the week.

Refined, during most of the week, was quiet and weaker. On Thursday the market was reduced ⅛c. on each of the brands—110° and 70° Abel test. Cases have also been quiet, and in light request. The price quoted for plain brands fell ¼c. to 10¼c. Early in the week there was an active business in crude oil. On Wednesday the demand fell away a little, but up to that time prices had not changed. The closing prices of certificates of crude petroleum and of petroleum products last evening, as compared with those of Friday, February 9, were as follows:

	February 9.	*February 16.*
Certificates of crude..	$1.04@1.04⅛ bid	$1.01⅝@101¾
Refined petroleum, 110°.....	7¾	7¾
Refined petroleum, 70°.....	7⅞	7⅞
Crude, in barrels,.....	7 @ 7½	7@ 7½
Case oil, plain brands.....	10½	10¼
Naphtha.....	6¾	6¾

The total quantity of petroleum (crude equivalent) exported from the United States from January 1 to February 10 was 53,678,188 gallons, against 47,678,188 gallons in a like period of 1882, an increased exportation in favor of 1883 of 5,697,445 gallons, against an increase of 4,885,780 gallons reported up to February 3. For the week ending February 10 the shipments were 5,762,617 gallons, against 12,011,819 gallons in the preceding week. New York city's exports of petroleum from January 1 to February 10 amounted to 46,949,104 gallons (leaving but 6,729,084 gallons for all other ports), against 37,318,708 gallons in a like period in 1882.

The total exports of petroleum and petroleum products for 1882, just reported by the Bureau of Statistics, amounted to 503,492,462 actual gallons, valued at $44,623,074, against 514,561,719 gallons, valued at $48,556,103, in 1881, a loss of 11,069,257 gallons and $3,933,029. The items of the two years' exports referred to were as follows:

	1882.		1881.	
Exported.	*Gallons.*	*Value.*	*Gallons.*	*Value.*
Refined oils.....	428,424,581	$37,635,981	444,666,615	$42,122,683
Crude oils.....	45,011,154	3,373,302	40,430,108	3,089,297
Naphthas.....	16,969,839	1,304,011	20,685,116	1,981,197
Lubricating oils	8,821,536	2,034,437	5,053,862	1,165,625
Residuum.....	4,265,352	275,263	3,756,018	197,321
Totals.....	503,492,462	$44,623,074	514,561,719	$48,556,103

The monthly report of the United Pipe Lines showed that the net stocks on hand January 31 amounted to 32,418,651 barrels, an increase from December 31 of 628,410 barrels. The receipts of oil in January were 1,811,822 barrels, and the deliveries 1,142,218 barrels.

OCEAN FREIGHTS.

The week has been dull in the ocean freights market. Offerings of tonnage for chartering have been restricted in some lines, but the demand has also been light, and rates have therefore been more moderate than for some time past. In many instances they were reported quite in the shippers favor. There has been but a moderate call for vessels for grain, and the request for those to charter for petroleum cargoes to the continent has been less marked than in preceding weeks. Berth rates are also moderate, owing to restricted inquiry and a fair supply. Aside from these changes there are no features to report.

SPECIAL TRADE AND INDUSTRIAL REPORTS.

[By Telegraph to BRADSTREET'S.]

Special telegrams from leading cities, given below, include special reference to the condition of the manufacturing industries of the country, the cereal crops, general trade, and the movement of merchandise:

EASTERN STATES.

From Portland, Me.: Quotations remain the same. Business dull and trade light. Heavy snows impede country trade throughout the state. Many factories are running with reduced forces.

From Boston, Mass.: There is practically but little change in boots and shoes, and trade still continues moderate, so far as new orders are concerned. Shipments for the week to places outside of New England 56,910 cases, against 54,326 cases the seventh week in 1882. Total shipments since January 1,336,801 cases, against 295,963 cases same time last year.

From Providence, R. I.: General business continues without activity, and there is a marked absence of speculation, the buying being confined to actual wants. The manufacturing jewelers still find collections dull, with new orders not coming in freely, and many are running but eight hours a day. Last year the manufacturers of jewelry were busy at this time filling orders, the trade setting in by the middle of January and continuing until April, when business became dull, and remained so until midsummer. The manufacturers of cotton machinery experience a slight falling off in the excellent business they have been doing ever since the "boom" set in, and will be satisfied this year with the ordinary amount of trade. The general stock market is weak. In short, the condition and outlook of business is not satisfactory, though it is not without its compensations.

MIDDLE STATES.

From Philadelphia, Pa.: There has been a decided improvement in some lines of trade, while others have ruled dull and have developed no new or interesting features. The week's business in wool has been the heaviest ever recorded in this market and prices have advanced 2c. per pound, owing to the increasing scarcity of all desirable grades. The grain trade has also been very active and the markets have been excited and steadily advancing, owing to the unfavorable outlook for British and French crops, and an urgent inquiry from shippers. Exporters have been buying options against sales for future shipment, as supplies here are comparatively small and sellers' ideas generally too high for spot business in cargo lots. Shippers' limits have been daily advanced, but this market has gone up too fast for them to overtake it on the general run of orders. There is a brisk speculative movement in futures of both wheat and corn. Flour is 12½ @25c. per barrel higher and in good demand. Receipts of grain, wool and other produce have continued light, the western floods delaying shipments. The supply of tonnage in port is increasing. Petroleum is dull and closes a shade lower. Provisions are jobbing freely and at full prices. Cotton is very dull, but prices are steady. Dairy produce is plenty and dull, except fancy grades, which are wanted at better prices. Vegetables and fresh fruits are active and firm. Dried fruits are scarce and in good demand. General trade in manufactured goods is quiet—the storms and floods in the west retarding active movements.

From Pittsburgh, Pa.: The trade situation generally continues unsettled, owing to the uncertainty as to the disposition of the tariff question. The outlook for spring trade is fair.

WESTERN STATES.

From Cincinnati, Ohio: The flood and its attendant losses absorb the entire interest of the business community; there is no trade or transportation, and manufacturing is at a standstill. Collections continue to come in, and merchants are hopeful. Banks appear liberally disposed. Firms who are flooded out of their offices by high water have, as a rule, secured temporary quarters in the upper portion of the city, although attempting no business.

From Cleveland, Ohio: The general jobbing business is a little quiet for the season, yet a fair trade has been done in most lines during the week. A tendency is noticeable on the part of country dealers to buy more cautiously and in smaller quantities than heretofore. Jobbers look for a fair spring business, but the amount it is thought will be more evenly distributed throughout the entire season than formerly. Collections are fair, and the tone among merchants generally is a hopeful and encouraging one. Indications point to another active season in building operations, numerous plans having already been settled upon and others being projected. For the last forty-eight hours the weather has been warm and much rain has fallen, creating renewed anxiety for fear of a repetition of the flood of a fortnight ago. Every precaution, however, is being taken to prevent a recurrence of loss in such an event.

From Columbus, Ohio: Grocers, and the trade generally, quote business slow. Wheat crop said to have been washed out in some places, and farmers will be obliged to plant corn to utilize the land. Mails come very irregularly, and traffic is injured to a considerable extent by floods.

From Toledo, Ohio: Trade in all lines is fully up to that of last year, and in boots and shoes somewhat in excess of it. We have so far escaped serious injury from floods. Collections fair.

From Indianapolis, Ind.: Trade, while it shows some improvement, is still dull in most lines. Collections are slow and somewhat unsatisfactory. Country roads are in a very bad condition. All streams are greatly swollen, and the floods have caused an immense damage. Although Indianapoiis proper has not suffered very severely, yet trade and travel have been decidedly affected.

From Evansville, Ind.: The past week has been warm and rainy, with a heavy rise in the river exceeding that of last year. Several large saw mills are flooded, and have suspended. A large loss is entailed on farmers in the bottom lands. Business is almost at a standstill, and there is considerable complaint of a falling off in collections. Wheat continues strong, with an upward tendency, though, on account of bad roads, the offerings from farmers are light.

From Chicago, Ill.: Money in better demand for carrying grain and provisions. Boots, shoes and rubber goods in better demand. Groceries active. Sugars scarce and firm. Drugs and chemicals more active. Wool active and firm; fine and medium scarce; stock chiefly coarse. Wheat unsettled at opening; soft weather and encouraging reports from California crop induced free selling, but interior and eastern buying orders come freely; prices advanced 1¼c.; local dealers bearish, and selling at advance. Corn firm and active; receipts decreasing; inspection very bad.

From Peoria, Ill.: There is no change in the condition of trade in this city from last week.

From Detroit, Mich.: The movement of wheat has been about double that of the previous week. Prices are higher, and there is a good market for almost everything in the produce line at good prices. Collections for the week have been slow.

From Louisville, Ky.: Trade has been temporarily suspended, and will remain inactive until proper railroad and river communications between this and other points can be resumed. The river has attained the highest point known. Viewed in a monetary light, the flood will result in a comparatively small loss to the business community here. The neighboring cities of New Albany and Jeffersonville, however, will sustain severe loss of business plants and properties.

From St. Louis, Mo.: Jobbing trade generally is not so active as in former weeks. Excepting the lower part of this state, growing wheat has not been hurt by the cold. All grains except oats higher and active. Flour very firm, but too high for activity. Horses in large receipt, and everything fair sells well. Mule supply small on a sharp demand.

From Kansas City, Mo.: General trade has been dull for several weeks both in wholesale and retail lines. Country collections are slow, and partial extensions are being asked for. Wholesale dealers are consequently very cautious about filling spring orders, and credits are falling. The general outlook, however, is considered fair, as the country is in a good condition.

From Minneapolis, Minn.: Weather mild, snow melting rapidly. Railroad communication interrupted with all points in the northwest. Deliveries of wheat by farmers have been largely increased during the week. Market very firm at about $1.12 for No. 1 hard. Receipts for the week 510,000 bushels. Flour firm and higher, best brands $7. Shipments for the week 81,000 barrels. Lumber is moving more freely, with prospects of a large spring demand. In other lines of the jobbing trade, business has improved and is satisfactory, with better collections than for the three previous weeks. From all sections of Minnesota and Dakota reports come in of preparations for planting largely increased acreage in wheat the coming spring.

From Omaha, Neb.: The weather is now mild. Corn having advanced to 32c. shippers report farmers as inclined to bring their crops to market, and it is believed that with an early spring will come healthy trade. All lines of trade are still quiet. Rainy weather prevails at present, and the snow is disappearing fast. No damage has been done by high water.

SOUTHERN STATES.

From Baltimore, Md.: There has been very little change in the business situation at this point since previous report, and general trade continues only fair. The demand for flour has been very active, sellers having the advantage. Grain transactions were also large, and western wheat advanced late in the week as much as 3@3¼c. The cotton market was quiet and dull, with only a limited inquiry. Light stock leather has a good call, and prices are firm. Good grades of hides are scarce and in demand. The supply of lumber is ample, and that market is rather quiet. The wool market has improved some, and all offerings find ready sale at good prices.

From Norfolk, Va.: There has been but very little change in the general outlook since our last report. All lines, except dry goods, fairly active. Cotton continues to come in freely. The stocks of peanuts on hand are not large, and are held firmly for better prices. Collections only moderate.

From Richmond, Va.: General business quite good and improving. Orders from travelers are increasing.

From Wilmington, N. C.: The weather has been very changeable, and is now warm. Cotton receipts good and market firm. Grain and breadstuffs steady. Freights, foreign and domestic, dull. Lumber and shingles firm. Spirits of turpentine quiet and steady. Rosin firm. Tar easier. Crude turpentine quiet and steady.

From Savannah, Ga.: The week has been one of excitement in consequence of the sesqui-centennial. Trades were well represented, and the show exceeded anything of the kind. The large influx of visitors increased trade with merchants, and sales of week doubled in all lines. Retailers' sales have been remarkable. Rice market firm, with considerable demand. Grain looking up, with good demand. Full stocks of hay to meet wants for a time.

From Columbus, Miss.: Trade good, considering the roads and weather.

From New Orleans, La.: The apparent exhaustion of supplies on plantations has boomed sugar ⅛c. to ⅜c., and strengthened molasses, of which sound grades are very scarce and stronger. Rice has improved; desirable parcels readily taken, fair to prime, at 5¼ @6c. In sympathy with improvement in the west and small supply of flour, grain and provisions are active, strong and materially higher. In response to New York, coffee is up 1c. Hardware, groceries, etc., quieter than last week. Money continues easy; foreign bills firm; sterling up ½ per cent.; francs unchanged.

From Memphis, Tenn.: Trade in general has been rather active during the past week, notwithstanding the bad weather. Corn firm, and somewhat higher. Cornmeal very firm, with good demand. Potatoes in good demand, with full prices. Flour strong.

From Nashville, Tenn.: Trade for the week quiet. Grain firm. Wheat higher. Corn very steady.

LATE MAILS.

Our Chicago correspondent writes as follows under date of February 14: Although the weather during the past few days has exhibited a softening tendency, and the railroads have so far recovered from the paralysis caused by the recent snowstorms and accompanying cold weather, as to be able to commence cleaning their side-tracks of delayed freights, and some are receiving a fair amount of new business, there is as yet comparatively little improvement to note in the general condition of business. The demands for discount at the banks from merchants and manufacturers whose business is chiefly with the interior maintain their previous volume. Jobbers representing nearly all branches of trade say their sales are not only disappointingly small but their collections not more than half what they were at this date during the previous three years. As a natural result the requests for bank favors are large, and the money market firm at 7@8 per cent. The failures that have recently occurred here also have a tendency to render capital nervous, and more than the customary caution is observed by bank officials when paper is offered for discount, and everything bearing the least tinge of suspicion is at once rejected. The failure of the old and well-known coal and pig iron firm of Rodgers & Co. failed to create any special surprise in well-informed business circles, as it was well

known that both the capital and business sagacity left the firm when the senior E. K. Rodgers withdrew from it. Since then the failure of the new concern has been regarded as merely a matter of time by shrewd dealers in business paper, and others who make the standing of business firms a study. The sluggish and unsatisfactory condition of the iron trade noted in last week's letters still continues, orders being moderate in number and small in size, but stocks are not large, and strong houses express a fair degree of confidence in an early revival in the demand for both refined and pig iron, their opinions being based on the fact that manufacturers of iron goods have very little raw material in stock, hence they must soon enter the market and buy freely to supply their immediate wants. The demand for steel rails remains quiet, a few orders are being placed, but at present the trade outlook is unsatisfactory. Owners of iron mines also complain of an absence of demand for ores, and as the season for an active resumption of mining is rapidly approaching there is a growing anxiety to secure contracts for their output of ore.

The wheat market has shown a large degree of activity throughout the week, the demand, however, is purely speculative, and mainly attributable to supposed damage that the winter wheat has sustained in certain locations from an excess of snow and ice on the fields, and the impression that the English, French, German and Hungarian crops will not be above half an average. As regards the first supposition, the most reliable advices from the winter wheat belt fail to justify the conclusion that the damage so far sustained has not been greater than is compensated by an increased acreage sown last fall. There is also a much larger area of ground prepared for spring sowing. As regards the European crops, our great distance from there renders an opinion valueless, were we disposed to venture one, which we are not. So far as regards the statistical position, it is not particularly strong, the stock in sight being liberal and reserves in farmers' hands larger than ever before at the close of winter. Corn has sympathized with wheat and advanced 2¼@2½c. and closes firm, but there is little speculative demand based on the merits of the article, and the impression prevails that a decline in wheat would carry corn back with it.

GRAIN IN CHICAGO ON DATES NAMED.

Articles.	*Feb.* 10, '83.	*Feb.* 11, '82.	*Feb.* 12, '81.
Wheat, bushels	5,564,000	3,713,000	7,861,000
Corn "	3,917,000	5,904,000	4,890,000
Oats "	1,561,000	860,000	1,570,000
Rye "	526,000	459,000	261,000
Barley "	204,000	334,000	265,000

There are also 284,000 bushels of wheat and 173,000 bushels of corn in vessels in harbor, making a total stock of 5,848,000 of wheat and 4,090,000 bushels of corn held here in store and in vessels. The situation of the provision market is unchanged; the speculative and consumptive demand being moderate. Hogs continue to arrive freely, the present indications are that they will exceed the receipts for the same month last year, the quality is also better.

The following table, giving rates on prime commercial paper and exchange on New York at the cities named, is based on special dispatches to BRADSTREET'S, received yesterday:

	Prime com. paper, per cent.	*Exchange selling on New York.*

TRADE EMBARRASSMENTS.

There were 221 failures in the United States reported to BRADSTREET'S during the past week, 35 less than the preceding week, 49 more than the corresponding week last year, and 76 more than the same week in 1881. The middle states had 57, an increase of 12; New England states 34, an increase of 8; southern states 52, a decrease of 23; western states 56, a decrease of 36; Pacific states and territories 22, an increase of 4; Canada and the provinces 35, an increase of 1. The principal failures were The Bay State Iron Company, Boston; Rogers & Co., iron and coal, Chicago; Forbes, Barstow & Co., lumber, Cleveland. In the principal trades they were as follows: General traders 45; grocers 28; manufacturers 17; liquors 16; shoes 13; clothing 9; dry goods 8; produce and provisions 8; hotels and restaurants 8; jewelry 7; hardware 6; tobacco and cigars 5; drugs 5; bakers and confectioners 5; lumber 4; fancy goods 4; furniture 3; gents' furnishing goods 3; books and stationery 2; hats 2.

ALABAMA.

AMBERSONVILLE.—Amberson & McCaghra, general store, have assigned.

MONTGOMERY.—W. A. Childs, music, has assigned.

UNIONTOWN.—H. S. Long, bar, is reported to have sold out and left town.

ARKANSAS.

ARKANSAS CITY.—J. C. Crenshaw, general store, has assigned to A. D. Gibson.

CALIFORNIA.

BLUE CANON.—S. C. Jordan, hotel, has called a meeting of creditors.

GREENWOOD.—C. Nagler, general store, has been attached.

PORTERVILLE.—J. T. Field, general store, has been closed for debt.

SAN FRANCISCO.—Cohn Brothers, gents' furnishing goods, have been attached.

SAN FRANCISCO.—William Gilleran, saloon, is advertised to be sold out by the sheriff.

SAN FRANCISCO.—Oscar Heimrich, exchange and bullion broker, has filed a petition in insolvency.

SAN FRANCISCO.—John Hoffman, printer, has been attached.

SAN FRANCISCO.—Louis Martin, saloon, has been attached.

SAN FRANCISCO.—J. C. Merrill & Co., commission, have been attached for $1,008, goods sold.

SAN FRANCISCO.—James Nolan, saloon, has been attached.

SAN FRANCISCO.—A. Roethling, saloon, has been attached.

SAN FRANCISCO.—Stahl & Maack, winter garden, have been attached.

SAN LUIS OBISPO.—H. C. Chase, clothing, has been attached.

SANTA ROSA.—H. Eckstom, jeweler, has been attached.

WASHINGTON.—Jose Prara, general store, has filed a petition in insolvency.

WOODLAND.—H. L. Mardens, livery, has gone into insolvency.

COLORADO.

FORT COLLINS.—Frank Spencer, saloon, has been attached.

LEADVILLE.—Jacob Schloss, wholesale liquors, is offering to compromise at 50 cents. In August last he claimed assets $80,000; liabilities $20,000.

CONNECTICUT.

BRIDGEPORT.—H. W. Lyon, corset manufacturer, has assigned.

HARTFORD.—Charles S. Pratt, salt, offers to compromise at 20 cents.

NEW HAVEN.—Cobb & Hull, clothing, have been attached for $5,000.

DAKOTA.

ARDOCH.—W. T. Sheppard & Co., general store, are reported to have assigned.

MILLBANK.—J. C. Drake, general store, has assigned.

YORKTOWN.—Cosgrove & Hempen, general store, have failed, and been attached for $2,000.

DELAWARE.

DOVER.—H. H. Hobson, grocer, is reported to have failed.

SMYRNA.—J. H. Primrose, shoes and hats, is offering to compromise at 33 1-3 cents, half cash, and the balance in thirty and sixty days. Liabilities about $6,700; stock $3,000. At a meeting of creditors in Philadelphia no conclusion was reached.

FLORIDA.

LAKE CITY.—W. E. Robinson, general store, is offering to compromise at 50 cents.

GEORGIA.

AMERICUS.—G. B. Hare, hotel and groceries, is offering to compromise at 25 cents.

CAMILLA.—Twithy, Culpeper & Co., general store, are offering to compromise at 50 cents. Liabilities $9,000; assets $7,000.

COLUMBUS.—E. P. Du Bose, grocer, has applied for homestead on his stock, etc., $1,293. He is said to have no other property.

LEXINGTON.—W. T. Young, groceries and saloon, has failed.

QUITMAN.—G. J. Harris, grocer, is offering to compromise.

IDAHO.

SILVER CITY.—M. Oberdorffer, general store, has been attached through the San Francisco Board of Trade.

ILLINOIS.

ALTON.—Stantschi & Fetterle, jewelers, were advertised to be sold out by the sheriff.

ASTORIA.—The liabilities of J. C. Lutz, hardware, are $6,600; actual assets about $3,000.

CAIRO.—Samuel Meyers, general store, has compromised at 40 cents.

CHICAGO.—Walter R. Donnelly, furniture, confessed judgment for $6,300, and executions are out for $9,000 additional.

CHICAGO.—A. H. Emery & Co., Sherwood House, has been closed by the sheriff.

CHICAGO.—Iven S. Johnson, grocer, has been closed by the sheriff.

CHICAGO.—Rogers & Co., iron and coal, have been closed by the sheriff. It is reported that they indorsed paper for the Union Iron & Steel Company to the extent of $80,000. The liabilities are $133,295; nominal assets $125,650; actual assets about $33,000. The ailure is attributed to the suspension of the Union Iron & Steel Company, with which the firm had a arge business.

CHICAGO.—The receiver of the Union Iron and Steel Company has issued the following statement: Liabilities—First mortgage $500,000; payments on account of bonds $278,400; notes $2,080,646; accounts $562,790; total liabilities $3,421,736. Assets—Four blast furnaces $558,397; steel converting mill $400,804; rail mill $486,584; wire and merchant mills $540,132; docks, tracks and improvements $91,736; frog shops $27,760; mine $150,000; real estate $400,000; notes $200,897; accounts $470,670; inventory $1,549,784; total assets $4,876,764. Assets above liabilities $1,454,931.

FAIRBURY.—G. H. Franzen, drugs, has been closed by the sheriff.

GENESEO.—I. R. Goodfellow & Son, jewelers, have assigned. Liabilities about $4,000.

STREATOR.—Jacob Romag, saloon, sold out to a creditor and has been attached.

WOODSTOCK.—John W. Miller, baker, has failed.

INDIANA.

CARROLL.—Steele & Son, general store, have called a meeting of creditors.

EVANSVILLE.—B. Levin, clothing, has assigned to Theodore Landsberg. Liabilities $1,400; assets $700.

FARMLAND.—Stanley & Harbour, flour mill, have assigned.

INDIANAPOLIS.—The liabilities of Edward Goe & Co., grocers, are reported at $5,600; actual assets about $1,500.

MONROE CITY.—John Williams, general store, is reported to have failed and gone out of business.

ROSSVILLE.—I. J. Quick, dry goods and groceries, has assigned to his father. Liabilities $2,800; nominal assets $4,000.

SOUTH BEND.—Homer W. Case, dry goods, became embarrassed, and is reported to have sold out. The stock was invoiced at about $9,000. Liabilities about $11,000, of which $6,000 was preferred. It is thought that there will be very little for unsecured creditors.

IOWA.

ALBIA.—J. E. Hardenbrook, drugs, has been closed by the sheriff.

SANBORN.—J. P. Selig, restaurant, has been closed under a chattel mortgage.

SULPHUR SPRINGS.—J. H. Ryder & Co., general store, have failed, and been succeeded by Mrs. J. H. Ryder.

WATERLOO.—Pierce & Whipple, shoes, have been attached for $1,410.

KANSAS.

GREAT BEND.—J. B. Champion, shoes, has assigned.

QUENEMO.—O. A. Arnold, general store, has assigned.

WICHITA.—I. N. Stoutmeyer, publisher of the *Times*, has suspended.

KENTUCKY.

BROOKSVILLE.—Jacob Wolf, clothing, has assigned.

FULTON.—B. A. Boone & Co., grocers, are reported to have sold out and left town.

LOUISVILLE.—Darnall & Co., wholesale cigars, have assigned to F. C. Davis.

LOUISVILLE.—The Kentucky Paper Bag Company has assigned to Robert Cochran. It was incorporated June 10, 1881, and had a paid in capital of $30,000.

STANFORD.—J. C. Marshall, grocer, has been closed by the sheriff.

LOUISIANA.

NEW ORLEANS.—Lange & Legendre, produce commission, have assigned. Liabilities $4,872; nominal assets $11,766. It is thought they will pay in full. Slow collections are ascribed as the cause.

YOUNGSVILLE.—The liabilities of D. Claverie, general store, are $5,000; actual assets $2,000.

MAINE.

BANGOR.—W. S. Nickerson, drugs, has failed, and thinks he can pay 20 cents. Liabilities about $7,000; assets $2,000.

BIDDEFORD.—George E. Pierce, grocer, is reported to have assigned. Liabilities $2,400; actual assets about $1,000.

ELLSWORTH.—Warren G. Savage, grocer, has gone into insolvency. Liabilities about $4,000; assets $800.

LEWISTON.—J. A. Rodick & Son, lumber, are in insolvency.

NEWPORT.—Miss T. W. Ricker, fancy goods, is reported to have failed, with small assets.

SEBEC.—The Sebec Woolen Company has failed, and offers 15 cents. Liabilities about $30,000; assets estimated at $8,000.

WATERVILLE.—A. F. Collins, tailor, has failed, and offers 35 cents. Liabilities about $3,000.

MARYLAND.

ANNAPOLIS.—D. W. Dorsey, clothing, has been closed up and stock seized by creditors.

BALTIMORE.—Edward De Cormiss, groceries and liquors, has filed a petition in insolvency.

BALTIMORE.—George M. Ehrman & Co., flour and feed, have called a meeting of creditors.

BALTIMORE.—Rossman & Slosman, cards, have assigned to E. J. Bond.

MASSACHUSETTS.

BOSTON.—W. J. Allen & Co., fancy goods, have compromised at 30 cents.

BOSTON.—Ames & Makechnie, gents' furnishing goods, have failed. Liabilities reported at $6,000; assets $2,000.

BOSTON.—The liabilities of N. R. Campbell & Co., books, are about $3,000, and it is thought they will pay but little.

BOSTON.—W. H. Folsom, poultry, has failed and is compromising at 10 cents. Liabilities about $6,000; assets $600.

BOSTON.—Hatfield & Francis, grocers, have assigned on account of an attachment being issued against them. Liabilities about $2,300. The creditors expect to be paid in full.

BOSTON.—J. E. & R. R. McNelley, bakers, have compromised at 50 cents, extending over two years.

BOSTON.—Newhall & Thatcher, hides and leather, have raised their offer to 55 cents, and the creditors voted to accept it.

BOSTON.—The Bay State Iron Company suspended on the 12th inst. The officers claimed that the iron market had been dull for some months past; they had to borrow considerable, and have been using western railroad bonds, which were among their old assets. By a recent decision of the western court the old state bonds take precedent, and the bank in Boston declined to receive them any longer as collateral. They were obliged to call on the stockholders, who decided to shut down and go out of business. At a meeting of stockholders on the 13th inst. it was voted to wind up and close the affairs of the company, authorizing the directors to sell the property, pay the debts and divide the residue among the stockholders; also approving the assignment previously made by the directors to S. Avery Richards, of Boston, and Wallace F. Foote and George R. Sherman, of Port Henry, N. Y., of all the company's property in New York, as trustees, for benefit of creditors. The liabilities are estimated $581,400; nominal assets $1,377,466, showing nominal net assets of $796,066. The real estate was figured at the appraised valuation made in October, 1877.

BOSTON.—Creditors of The Boston Diamond Cutting Company have filed a petition in insolvency against it.

BOSTON.—Warren A. Reed, tailor, who recently failed, offers 20 cents. Liabilities about $4,000; nominal assets $1,700.

BOSTON.—John A. Weber, saloon, has failed and gone into insolvency. Liabilities $2,416; stock $850, mortgaged for $800.

BROCKTON.—F. B. Tucker & Co., shoe manufacturers, are in insolvency. They offer 50 cents.

GREENFIELD.—Manley McClure, brick manufacturer, has been attached for $1,000.

HOLYOKE.—Dickinson & Hillman, drugs, have been attached.

LEE.—W. H. May, paper manufacturer, has failed and filed a petition in insolvency. Liabilities about $20,000.

LINCOLN.—C. B. J. Root, general store, owes $10,200, and offers 35 cents.

MINNEAPOLIS.—O'Conner Brothers, dry goods, have assigned.

MONTICELLO.—L. E. Reynolds, cigars and confectionery, has failed.

ST. PAUL.—Victor Serenyi, printer, has been closed by the foreclosure of a chattel mortgage.

MISSISSIPPI.

ABBOTT.—George H. Burkitt & Brother, general store, have failed and assigned. Liabilities about $1,000; assets $750.

ABERDEEN.—The liabilities of Cribb & Brother, saloon, are about $3,400; actual assets $1,500.

MOUNT PLEASANT.—A. T. Morgan, general store, who recently assigned, owes about $4,000; actual assets about $1,000.

OXFORD.—J. J. Quarles & Co., confectionery and restaurant, have assigned. Liabilities $1,000; assets $300.

RIPLEY.—L. P. Smith, general store, has failed and sold out.

STARKVILLE.—Montgomery & Saunders, general store, have assigned. Liabilities about $14,000.

WALNUT.—T. W. Rowland & Co., general store, have failed.

MISSOURI.

KANSAS CITY.—F. D. Camman & Co., provisions, have been attached for $1,886.

KANSAS CITY.—Leonard, Coop & Co., successors to Leonard, Williams & Co., manufacturers of crackers, have been closed by the sheriff on a claim by a Chicago firm.

SEDALIA.—W. W. Bozman, cigars, has been closed by the sheriff.

SEDALIA.—The Queen City Co-operative Store has been closed by the sheriff.

ST. LOUIS.—Patrick Gibbons, grocer, has been closed by the sheriff.

ST. LOUIS.—R. D. Wells & Co., wholesale queensware, have compromised at 50 cents and continue business. The liabilities are $47,185, of which $13,800 is secured; nominal assets $42,759.

MONTANA.

WALKERVILLE.—T. N. Brown, hardware, has failed.

NEW HAMPSHIRE.

DOVER.—Charles Kingman, jeweler, owes about $10,000; actual assets $5,200. The stock was sold at 70 cents on the dol-

lar, upon an attachment of his mother, whose claim of $7,000 was for borrowed money.

GORHAM.—F. C. Stevens, general store, who recently failed, owes about $10,000.

NORTH CONWAY.—The Glen Ellis Lumber Company, which was recently burnt out, has been attached, and it is said cannot pay 50 cents.

PORTSMOUTH.—H. F. Gerrish, grocer, has been attached. Liabilities about $7,000, besides a mortgage on his house; actual assets about $3,500.

TILTON.—A. A. Colvin, yarn manufacturer, has failed. Liabilities about $3,500; assets $1,500.

NEW JERSEY.

ORANGE.—P. Callahan & Co., hats, have been closed out under a judgment for $900. Liabilities $1,500; actual assets about $550.

ORANGE.—Fairchild & Todd, builders, have been attached for $2,102 by C. H. Dodge, on a note. They have a branch at Pueblo, Col., where they are reported to have assigned, and are also reported to have dissolved at Orange, Mr. Fairchild succeeding.

PHILLIPSBURG.—J. C. Kent has been appointed receiver of the Delaware Rolling Mill, which was affected by the failure of W. A. Leavitt.

SWEDESBORO.—E. A. Garrison, produce, has assigned.

TRENTON.—Hall & Warren, grocers, have compromised at 50 cents.

NEW YORK.

ALBANY.—The liabilities of the Ransom Stove Works are about $180,000; assets $60,000 at appraisal.

AMSTERDAM.—John M. Huntley, dry goods, is reported financially embarrassed, and has sold out. He has been gradually losing ground for some time past, as his expenses were enlarged and the business did not increase as he expected.

AUBURN.—Horace B. Fitch, paper hangings, etc., has assigned to Charles G. Briggs, caused by the death of his father.

BUFFALO.—The liabilities of Sydney G. Poole, lumber, are estimated at about $66,000, of which $50,000 are preferred; nominal assets $15,000; actual assets $10,000.

BUFFALO.—John Southall & Co., paints and varnishes, have failed and given a bill of sale to the Forest Varnish Company of entire stock, except consigned goods and book accounts.

CHATEAUGAY.—The schedules of Mrs. F. M. Day, general store, show liabilities $5,000; actual assets $2,100.

CHATEAUGAY.—Philip McGuire, undertaker, etc., has failed.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 24, 1883.

NOTES OF THE WEEK.

Since the subsidence of the Ohio floods the cities of Cincinnati and Louisville have announced their ability to care for themselves. A number of other and smaller towns and cities situated along the banks of the Ohio, between Cincinnati and the Mississippi river, have, however, suffered severely in the loss of property. Houses have been floated off, and, taking the lower Ohio valley as a whole, hundreds of people have been left destitute. The business communities elsewhere in the country have responded generously to their appeals for help, and thousands of dollars have been collected from the various exchanges and business houses throughout the length and breadth of the land. Word has even been received that a subscription has been started in Germany for the relief of the Ohio flood sufferers. This incident gathers significance from the fact that subscriptions have but just ceased in the United States for the relief of those who have been stranded by the floods in Germany. The work of relieving those rendered destitute along the line of the Ohio goes along promptly. Committees and others are actively at work, and the dollars and what can be got for them are being speedily placed where they will do the most good. No advices have been yet received of widespread damage in the lower Mississippi valley due to rising waters, although two or three overflowed levees and consequent destruction to property are reported. Word that unusually high waters further south are not to confront the residents of that region will be gratefully received throughout the land.

Yesterday morning the stock market was treated to a variation in the monotony of its decline by a sudden upward twist of prices. This was due to the accumulation of an excessive "short interest," nearly everybody of late having been engaged in selling short under the depressing influences of floods, failures and Congress. When the market gets into a state where the amount of all kinds of stock available for lending is nearly used up, a quick "twisting of the shorts" is in order by some large operator, and such a rise follows as the market had yesterday. When the small bears have been forced to cover their short contracts the temporary support the market received by their purchasing is exhausted, and it resumes its regular course.

After a long period of struggle the advocates of civil-service reform have secured the appointment of a civil-service commission. The President's appointments, though somewhat delayed, will be generally regarded as having been made in entire good faith. The selection of Mr. Eaton was a foregone conclusion. A civil-service commission upon which he did not sit would indeed be strangely out of place. He has given prolonged and careful study to the system which it is the aim of the reformers to introduce, and the details of whose operations he and his associates will be required to organize and superintend. The other appointees, Messrs. Gregory and Thoman, are less known than Mr. Eaton, but there seems to be no reason to doubt that they are in full sympathy with the aims of the reformers. Perhaps the weightiest criticism of the appointments made is that none of the members are conversant with the practical details of departmental organization and methods.

The troubled waters of French politics are apparently beginning to subside, though what the final outcome of the situation will be is as yet uncertain. There appears to be an end to the succession of shadow-ministers that have of late been flitting across the stage. The moderate programme, the success of which was predicted last week, has been abandoned, and a ministry has been formed under the leadership of M. Jules Ferry, who, even if of narrow sympathies, has at least the merit of definiteness of purpose. M. Ferry takes his old office of Minister of Public Instruction. The important post of Minister of Foreign Affairs goes to M. Challemel-Lacour, a man of pronounced republican antecedents, who has his record as an administrator yet to make. M. Ferry accepted the task of forming an administration after a prolonged conference with his friends, and after a resolution of the Republican Union declaring its determination to support a cabinet which would use the existing laws against all pretenders.

The programme of the new ministry as explained by M. Ferry proceeds upon the lines suggested in the resolution of the Republican Union. The knot of existing complications regarding the pretenders is to be cut through by the enforcement of an old law of 1834, under the operation of which the princes will be deprived of their military posts. The government thought, M. Ferry said, that nothing else was necessary for the present. The republic was not endangered, and even in the event of a conspiracy it would have ample power to protect itself by rights inherent in all governments. Without infringing on the essential liberties of the people the government demanded that measures be taken against the utterance of seditious cries and the authors of seditious placards. Irritating questions and fruitless discussions should, he thought, be laid aside, leaving the government the initiative which belonged to it as a right. There will in all likelihood be an effort made to consolidate the republican influence in the proposed reforms in the magistracy and in the military bill which the ministry are to introduce. The government intends to facilitate the execution of public works. In regard to external affairs M. Ferry said that the foreign policy of the government would be peaceful, but not necessarily one of inaction.

It may not be uninteresting to note that while the citizens of New York are discussing the project of a new charter, the English ministry is preparing a plan for remodeling the government of London. It is intended, according to the *Pall Mall Gazette*, to add the title of the corporation of the city to the functions of the metropolitan Board of Works. The city corporation, as it is now known, will cease to be, and the historic "city," it is said, will become a couple of wards in the new metropolitan municipality. The aldermen of the city will no longer exercise judicial functions. Its magistrates are to be appointed by the Lord Chancellor, and its police are to be managed by the Home Secretary. The Lord Mayor is to be elected not by the liverymen of the ancient city as formerly, but by the representatives, in city council assembled, of the greater London which has grown up around the ancient corporation. The aldermen will no longer be elected for life.

In short, "so far as the ancient historic corporation is concerned," says the *Pall Mall Gazette*, "the bill will make a clean sweep of all the archaic and venerable curiosities which cluster around the 232 aldermen and councilors who at present administer the affairs of a single square mile of the metropolitan area." That powerful body, the Metropolitan Board of Works, is to disappear. The thirty-eight vestries and district boards which constitute so important a part of the governing machinery of London are to be retained to continue their work, but the new municipal council is to be charged with the duty of "securing a certain harmony in the treatment of the metropolis." One of the most striking features of the scheme is that which takes the control of the police from the municipal authorities and puts the force under the Home Secretary. The *Gazette*, while not expressing a definite opinion as to the expediency of this step, points out that in most of the great European capitals, except Paris, the municipality is entrusted with the control of the police, and that even in Paris there is a very strong party in favor of giving the control of the police to the representatives of the city. It will be interesting to watch the progress of this new experiment in centralization.

Time was when the freedom of the press was regarded as one of the chief agents in the progress of civilization, and when much florid oratory was expended in defense of that palladium of human rights. But it seems that, after the ignorant fumes have been dissipated that mantled the clearer reason of statesmen, it begins to be seen that an untrammeled press may be a very inconvenient thing; so inconvenient in fact and so powerful for evil as to require a vigorous exertion of the resources of civilization to counteract its demoralizing effects. At a recent session of the Italian Chamber of Deputies the Minister of Justice gave notice that the government intended to propose severer penalties against libels on the part of the press. This happened, it is true, in a land which has been fruitful in despotic policies, and perhaps nothing better was to be expected from it. In France, as a recent instance has demonstrated, there is to be no liberty of publication by means of placards, which may perhaps be taken to be a branch of the great right of freedom of utterance. This, too, under the republic, the government of freedom. Even in England, where many excellent speeches on the freedom of the press have been made, the views we have referred to seem to be gaining force. Perhaps the most remarkable utterance touching this matter recently delivered is that reported as having been given out by the Chief Secretary for Ireland, who, in a speech justifying prosecutions of the press for the publication of articles attacking judges and jurors, declared that such articles were as much a part of the machinery of murder as the sword-cane or the pistol. These words fall somewhat strangely on American ears; but, perhaps, the excitement prevalent in Ireland has not been entirely without influence on the ministerial mind.

THE COTTON CROP OF 1882–83.

The cotton report given below is based on 885 replies from the correspondents of BRADSTREET'S in the immediate cotton-growing regions of the south. The number of counties reported is 579, covering 94 per cent. of the cotton districts. The average date of the replies is February 15. Information was particularly sought as to two points. First, as to the amount of cotton still in the hands of planters unsold on the plantations, and, second, as to the comparative financial condition of planters in relation to previous years. It will be recalled that our method has been to set forth just what our correspondents send to us after eliminating all palpable errors. The returns, analyzed by giving to each county its due proportion, indicate that on February 15 the amount of cotton remaining unsold on the plantations amounted to 10 per cent. of the whole crop.

Following is our customary table:

BRADSTREET'S COTTON REPORT TO FEBRUARY 15.

State.	Counties reported.	Cotton counties over 500 acres	Percentage of area reported	Number of replies received	Weight of seed to pound of lint cotton: Dec. 15, 1882	Weight of seed to pound of lint cotton: Feb. 15, 1883	Pounds of seed required to pound of lint cotton: Dec. 15, 1882	Pounds of seed required to pound of lint cotton: Feb. 15, 1883	Per cent. of crop remaining on plantations	Weather for preparing for next crop: Good.	Fair.	Bad.	Financial condition of planters compared with previous years: Better.	Same.	Worse.
North Carolina	96	62	95	90	3.05	3.05	3.05	3.05	14	1	1	83	24	14	17
South Carolina	36	32	97	55	3.15	3.15	3.15	3.15	11	2	3	50	43	9	2

Totals	579	442	94	885	3.12	3.12	3.13	3.12	10	48	103	662	576	137	123

The question regarding the financial condition of planters was as follows:

What is the financial condition of planters compared with previous years?

The replies to this question show that a general improvement has taken place, 576 correspondents reporting a better condition, 137 the same as in previous years, while 123 say that their condition has become worse. An improvement is reported in every state save North Carolina. Forty-seven correspondents in this state report a more serious condition of the planters with respect to credits, etc. The letters of a traveling correspondent in the south have recently directed attention anew to the point indicated and covered by this report. We are convinced that a distinct improvement has been effected with respect to the financial condition of the southern planters. Much has been written of late about Mississippi, but our returns from 65 out of the 70 cotton counties of the state show that an improvement has been effected even there. Elsewhere we give such memoranda as our correspondents in Mississippi have sent us regarding the point in question. While our December report contained full replies regarding the weight of bales in this crop, the resultant was not at the time given out. We now give the December report on this point along with that of February. As will be seen from the table given below the present report as to the average weight of bales shows a slight reduction as compared with the December return in all the states save North Carolina and Texas. The average for the entire cotton belt is 483 pounds to the bale now as in December—a striking coincidence in calculation. The December report made the number of pounds of seed required to a pound of lint 3.15; the present report reduces this to 3.12 pounds—a slight difference. As shown by the table, the weather has been bad for preparations for the next crop.

Picking was generally finished by January 1.

The replies of our correspondents show that there is relatively less cotton held by speculators at the interior towns of the south now than at the same time last year. It is manifest from this report that the disposition to increase the cultivation of corn and other crops for domestic consumption in the cotton regions is working good results. The remarks of our correspondents are full of references to the fact that, while planters may be no better off as regards ready money, they are fortunate in having on hand fair supplies of corn and provisions. It is to be hoped that this wholesome tendency will be continued until the south cannot be regarded as dependent upon any single crop.

While our correspondents send information as to the probable acreage of cotton next year, it is, of course, too early to generalize in relation thereto.

THE MAYORALTY AND THE TAXING POWER.

The New York *Evening Post*, in referring to our remarks of last week on Mayor Edson's charter, has this to say:

> BRADSTREET'S, in discussing the charter, declares that we are all wrong about the aldermen, and that they are needed as a city legislature to raise taxes, while the mayor ought to have full executive authority. In other words, it adopts to that extent the view of the aldermanic sages themselves, and wishes us to return to the government of the fathers, with its three coördinate departments of government, each independent in its own sphere, etc., etc. Curiously enough, it points out, in the course of the same article, that the aldermen have no real taxing power now; the function of fixing the limit of the annual levy being lodged with the Board of Apportionment, an executive body. The fact is, that the taxing power was taken away from the board some years ago, because experience showed that they could not be trusted to exercise it, and whatever else may happen, we venture to predict that it will never be restored to them for the sake of political symmetry. BRADSTREET'S adds that "the *Evening Post* would do away with local legislation and obtain everything of the sort from Albany. Its position is but one remove from advocating the appointment of an autocratic mayor of the city by the governor." On the contrary, what we want is to do away with perpetual changes in the government of the city from Albany, and give the governor just as little power over municipal affairs as the president has.

The views of BRADSTREET'S regarding Mayor Edson's proposed charter were set forth before the resolutions of the Board of Aldermen were given to the public. To this extent we have "adopted" their conclusions. But we do not know that sound views regarding this local government question are any less sound in having the approval of the New York aldermen. BRADSTREET'S clearly understands that the right conduct of city business in New York does not turn upon any question of "symmetry" or of "coördination." As we have given utterance to nothing of the sort it is entirely gratuitous on the part of the *Evening Post* to attribute to us the commonplaces of the books. Government is a matter of practical business. A wise direction of city business is, indeed, as much a matter of accounting—of well-defined balance sheets—as of anything else. There are, therefore, as yet very few acknowledged general principles in relation thereto. One of these, however, should everywhere be recognized as thoroughly established, namely, that the taxing and appropriation power should be distinct from the executive or disbursing power. The talk as to whether the conduct of city business is legislation or not is for the most part beside the question. It is necessary to deal with things rather than names. Thus, a confused writer in the *Evening Post* this week ridicules the idea that there is legislation, while stating that the "voting of taxes" is a "legislative function." As the one main thing which the city authorities have to do is to levy taxes and appropriate the proceeds thereof, it would seem that a good part of the work is distinctly "legislation." The writer referred to thus states the question in hand: "The real problem of the day in regard to the amendment of the city charter is to secure an efficient local administration coupled with a proper exercise of the sole local legislative function taxation." To this end he would have a board of assessors elected by the people, who would, with the mayor and controller, constitute the taxing power.

But here is a most serious confusion of responsibility. The mayor and controller are, or should be, executive officers only, and should have nothing to do with the levying of taxes, save as the mayor is clothed with the veto power. The simple truth is that there is no satisfactory way out of the jangle save to return to the Board of Aldermen the taxing power which was taken from them through the advice of political quacks. Properly understood, the composition and character of the present Board of Aldermen is apart from the real point involved. Local government in New York broke down, in a measure, through the demoralizing effect of a loose credit system. When speedy remedies were sought the first thing that occurred was to minimize the local legislature by taking from it the power of taxation and appropriation.

The thing to do now is to undo what has been done. First give to the mayor the executive power which must go with true executive responsibility; return to the city councils the power of taxation and appropriation under the condition that the city is to do no more borrowing; that instead it should do an exclusively cash business under a system of rigid accounting. Tweed, it should be remembered, for the most part borrowed the stolen millions. If he had been getting them in exchange for tax receipts the eminent citizens who said good things of him would have better understood what was going on. The above points acknowledged, all else is for the most part a question of detail. We believe that in the end the local legislature of New York will receive back its powers. It is to be hoped that before that time comes the city will not have to pass through a period of still closer dependency upon Albany.

DEBT REDUCTION AND FUTURE INVESTMENTS.

During the discussion on the tariff very frequent reference has been made to the fact that the revenue has been so much in excess of the ordinary needs of government that the payment of the debt has been proceeding with unexampled, and, it has even been suggested by some, with unnecessary and inconvenient rapidity. The calls for bonds have been frequent and for large amounts, and an immense amount of capital hitherto locked up has been suddenly liberated. This condition of things has been regarded by some as mischievous. They have discerned in the near future a gorged treasury and a convulsed and paralyzed trade. Among the effects of the rapid payment of the debt they foresaw a contraction of the currency which would result in a panic. It has also been suggested that before long the basis of the bank circulation would have to be changed in consequence of the retirement of the bonds. The growth of the revenue and the rapid debt reduction which has followed in consequence have, it will be seen, already given rise to some, and are likely to bring to the surface still other public questions of great interest and importance.

One of these questions which naturally attracts the attention of the economist is what will be the effect of the return to private hands of the loans on the bonds, and in what way is the money so returned most likely to be invested? The question is, of course, one of peculiar interest for the holder of government bonds, who is compelled to relinquish a secure and steady income, and who looks to the future with something of concern. The question is one which, although strikingly presented here, is not by any means confined to this country alone. The amount of first-class securities has been steadily decreasing the world over. The supply of foreign bonds held in the more advanced countries, it has been remarked, has steadily diminished with the accumulation of wealth in the poorer ones. So that, as will be observed, the question is not by any means a local one, but is of general interest. It is to be assumed, of course, that at least a large proportion of the money returned from the coffers of government will seek investment. Leaving out of consideration the probably not very numerous class of spendthrifts who dissipate and scatter about their patrimonies, it may be affirmed that almost everybody will endeavor to employ such means as he can command for the purpose of profit. This being so the setting free of the amount represented by the called-in bonds must be reckoned an economic gain, because it represents to that extent an accession to the capital of the country engaged in furthering the work of production, whereas the property of a creditor of the public, as has been well said, represents no addition to the national wealth; it consists only in a portion of the national taxes, and by so much as the creditors is the richer the nation at large is the poorer.

The increase of the tendency to associated action in the recent past, and the advantages of the corporate system as regards the accumulation of capital and its efficient employment, render it very probable that a large share, perhaps most, of the capital liberated by the process of debt reduction will find its way into corporate concerns. The result of the further infusion of capital into industrial enterprises cannot but be in the highest degree gratifying. It

is probably within bounds to say that the marvelous material development witnessed in the course of the last half century, though previously unparalleled, has as yet given only earnest of its future. The corporate system has been the chief agent in the tremendous industrial achievements to which this generation has been a witness. In order that it may continue to be the principal instrument of the material activity of the age, and especially to the end that it may attract to itself unemployed capital seeking investment, it is necessary that certain abuses in management and otherwise which have crept into the system be remedied. These results, as we have heretofore pointed out, can be best attained by providing for the giving increased publicity to information concerning the financial standing and operations of the more important classes of corporations.

EXPORTS OF BREADSTUFFS AND PROVISIONS.

The Bureau of Statistics' advance statement of exports of domestic breadstuffs for January and for seven months ended therewith is mainly valuable for the details presented. The increased quantity of grain sent abroad in January has been a matter of common report for three weeks past, and the various commercial statistics available have enabled the investigator to approximate the net result considerably in advance of the government report. The total January shipments of domestic breadstuffs are given as follows:

EXPORTS OF BREADSTUFFS IN JANUARY.

	1883.		1882.	
	Bushels.	*Values.*	*Bushels.*	*Values.*
Wheat	6,980,077	$7,632,002	6,772,511	$7,652,839
Wheat flour	4,677,430	5,293,823	2,413,655	2,935,541
Indian corn	4,203,916	2,841,974	1,059,579	1,210,054
Indian cornmeal	75,860	69,838	66,808	73,963
Barley	8,926	5,885	15,851	12,259
Rye	23,485	19,379	83,323	81,760
Oats	14,756	8,385	19,192	11,078
Totals	15,993,450	$15,874,286	11,050,919	$11,977,524

The gains in foreign shipments, it will be noted, were of wheat, wheat flour and Indian corn only. The number of bushels of each exported in January last in excess of the quantity so shipped in January, 1882, was 216,566 bushels of wheat, 2,263,775 bushels of wheat in the form of flour, and 2,544,337 bushels of Indian corn, or a total excess of exportation of 5,024,678 bushels. The decreased shipments abroad in January of this year, as compared with those of the like month in 1882, amounted to 10,948 bushels of Indian corn in the form of meal, 6,925 bushels of barley, 57,838 bushels of rye, and 4,436 bushels of oats, or a total decrease in exports of 80,147 bushels. This shows a net gain in last January's report of domestic breadstuffs, as compared with January, 1882, of 4,942,531 bushels. This quantity is but 294,593 bushels less than the net excess of exports of breadstuffs since July 1 last, as the quantity exported in the seven months indicated exceeds that of the corresponding seven months in 1881-82 by 5,263,124 bushels. The seven months' totals are as given below:

EXPORTS FOR SEVEN MONTHS ENDED JANUARY 31.

	1883		1882	
	Bushels.	*Values.*	*Bushels.*	*Values.*
Wheat	86,618,153	$92,457,200	66,731,515	$79,690,312
Wheat flour	27,347,350	32,930,945	16,644,875	20,646,469
Indian corn	9,413,681	6,825,821	34,628,575	22,370,175
Ind. cornmeal	728,685	573,575	900,850	457,434
Barley	266,304	189,022	108,143	121,012
Rye	822,992	619,585	436,087	446,480
Oats	180,012	100,694	414,008	189,561
Totals	125,377,177	$133,696,842	120,014,053	$124,121,439

In the above, wheat, wheat flour and rye appear to be the only exported products which, from July 1, 1882, to January 31, 1883, went abroad in excess of the corresponding seven months in 1881-82. The excess shipments of the same amounted to 19,886,638 bushels of wheat, 10,702,475 bushels of wheat in the form of flour, 98,161 bushels of barley, and 386,905 bushels of rye, or a total of excess shipments of 31,074,179 bushels. The falling away during the past seven months was very conspicuous in all the remaining items, but particularly so as to Indian corn. It will be noticed that almost one-half of the total exports of Indian corn for seven months were shipped in January last, the proportion being 46 to 94. The falling away in exports of breadstuffs for seven months, as compared with the corresponding seven months in the preceding fiscal year, were, of Indian corn, 25,214,894 bushels; Indian corn in the form of meal, 262,165 bushels, and oats, 233,996 bushels, or a total falling away of 25,711,055 bushels, thus leaving the net gain, as mentioned above, 5,263,124 bushels.

Of the whole quantity of grain, reckoning flour and meal in equivalent bushels of wheat and corn, which went abroad during the past seven months, New York city shipped 41.31 per cent. in value, San Francisco 16.16 per cent., Baltimore 16.01 per cent., Boston 6.7 per cent., and Philadelphia 5.7 per cent., or from these five cities about 86 per cent. of the total quantity exported in that time.

The exhibit of exports of provisions, tallow and dairy products is as a whole less satisfactory than the above. January's shipment abroad of these products were valued at $10,649,119, against $13,200,379 in January, 1882. This shows no special improvement, for the total values for shipments during seven months past was $27,961,925, against $31,985,146 in the like seven months of 1881-82. In January the shipments of fresh beef exceeded like exports in that month in 1882, the totals respectively being 7,577,199 and 5,827,548 pounds. The like was true of hams, the figures being 5,361,179 and 2,254,842 pounds. Butter exports, *i. e.*, all shipments so classified, were likewise ahead last January, the totals being 755,578 against 595,513 pounds in January, 1882. From the table of shipments by ports, it appears that New York city alone exports over 86 per cent. in value of all the provisions, tallow and dairy products sent abroad from the United States.

RAILWAY COMMISSION WORK.

Just at the present time, when the newly created Board of Railway Commissioners for the state of New York have but just begun an active official career, the records of other state boards of railway commissioners naturally possess an added interest for the more thoughtful spectators of public affairs. The Massachusetts Board of Railway Commissioners has long enjoyed the reputation of arriving at the most satisfactory results in arbitrating between the public and the corporations engaged in steam railway transportation within the borders of that state. The fourteenth annual report of that body has just been issued, and contains the customary statistics concerning mileage, number of trains run, passengers carried, tons of freight transported, and average price per mile of each. The chapter of accidents taking place during the year is given with comparative data from preceding years and from foreign countries, thus tending to show the relative efficiency of service. Particular stress is laid on the regulations for security of life and property; signaling, rules for employés, and other precautions being treated of exhaustively. In addition to this department of work which falls to the lot of a railway commission to perform, that which comes more particularly under the head of arbitration, or umpiring upon disputed points between the railways themselves and the public, may be regarded as quite as important and far more delicate. The peculiar constitution of the New York Railway Commission will render its work in this direction observed of all eyes, and not less so on account of the avowed antagonism of the railways themselves to one member of the commission. From a brief examination of the cases for arbitration passed upon by the Massachusetts Railway Commission during the past year, it is easy to infer that if New York's newly formed board does its whole duty, which, by the way, there is no reason to doubt that it will do, it will soon have a far more important report to make on these points than that made by the Bay State board. The principal case for arbitration recorded by the latter is declared in the current report to be "one of great importance in theory and practice," and may be described, in brief, as a discrimination in favor of the longer route in the matter of freight charges. This is by no means a new complaint against railroads, and therefore attracts instant attention when coming from a hearing before an arbitrating body possessing the confidence of the public and a legislature. In this case a railroad company was charged with violation of the statutes of Massachusetts forbidding a higher freight charge for a less distance from the same point of departure in the same direction. The complaint states that $1.50 was charged per ton for transporting coal over the Norwich & Western Railroad (leased by the New York & New England Railroad Company) from Norwich to Webster, forty-three miles, while only 90c. was charged for transporting the same or less quantities to Worcester, fifty-nine miles. The board promptly reviewed the case, and presented an extended argument for the benefit (apparently) of the railway corporation most interested, upon which it gave notice that the public statutes had been violated, as charged, and recommended that the company revise the rates complained of "without awaiting further action by the board, or for the result of litigation, which may last many years," etc. It should be added that the freight tariff was at once revised as suggested, and corresponding reductions made for other stations than those named in the complaint. A variety of other cases for settlement are reported at length, some of which are of general interest, but a majority of local import only. Questions of compensation to be paid one road by another for the use by the latter of the former's tracks, as well as those involving an inquiry whether a certain railroad had gone through with all the requirements to secure right of way for graded crossings, etc., are not of a character to appeal deeply to others than those concerned, but furnish excellent material for keeping a railway commission busy when nothing more important is at hand. An application for a "charter certificate" under the provisions of the public statutes was refused a railway company apparently on excellent grounds. A condition precedent to granting a certificate is that the capital stock shall have been subscribed "by responsible parties." It appeared, according to the report of the commissioners, that the responsible men who had subscribed to the undertaking (to build a railway) had individually taken but three shares each, and that a "New York construction company," whose capital was but $36,000, and whose liability was limited to that sum, had subscribed for the majority of the shares. The members of said construction company were admitted to be men of wealth and of "responsibilty," but, for the reason that "responsible parties" did not subscribe for all the capital stock, the charter certificate was refused. Disputes as to management of street railways in various cities, the freight rate on milk daily carried into Boston by the steam railways, and other minor matters, comprise the majority of the cases cited, of which there are in all eighteen of the character under discussion. Upon the whole, it is quite evident that much costly and prolonged litigation has been saved to the citizens of the neighboring commonwealth by the railroad commission of that state. There is good reason to believe that justice has been meted out, and the readiness shown by the railways to meet the commission half way after any decision against them is fairly satisfactory evidence that the state commission system of encountering the difficulties calling for regulation of and legislation concerning railways is worthy of trial. New York state certainly presents a fertile field for a competent and active railway commission. Aside from the questions of passenger and freight rate discrimination, which are notorious and which call loudly for a remedy, there is that blight on railway management, or rather mismanagement, in this state which rendered possible those inexcusable accidents, with loss of life, which are notorious abroad as the Spuyten Duyvel and tunnel disasters.

MEMORANDA REGARDING THE CONDITION OF SOUTHERN PLANTERS.

The following memoranda regarding the general condition of the cotton regions of the southern states are from the February cotton report to BRADSTREET'S:

NORTH CAROLINA.

From Carteret county: The mortgaging system works badly; cotton farmers have but little money with which to begin the new year, and must depend upon advances from merchants for their supplies, and as the low price of cotton has left a balance against them with the merchants, the outlook is not the brightest; they are, however, better supplied with the necessary equipments to make a crop than they were at the beginning of last year.

From Halifax county: Nothing has yet been done toward next crop, owing to continued rains. Merchants failed to get over two-thirds of their money, and therefore will be unable to advance so much another year. Many of our best laborers are leaving for the turpentine regions, and many small farmers cannot get furnished, and will make no crops. There will not be over 70 per cent. of last year's crop planted.

From Johnston county: The cotton crop in quality is better than for many years past, but the price has been low, while for the past year the prices of provisions have been much higher than usual, consequently there is much demoralization among planters and the laboring classes. The prospects are good for a large falling off in acreage.

From Nash county: We have had very bad weather since New Year's, it having rained nearly all of the time. The farmers are badly behind, and very much in debt. Present prospects are very poor.

From Pender county: Owing to high prices for provisions last season and the low prices of cotton, our farmers are in poor condition, financially, and it could not well be otherwise, when we are obliged to pay as much for one pound of meat as we receive for two pounds of cotton.

From Richmond county: The weather this season has been worse for preparing to plant than it has been before during the past ten years. It has rained nearly every day for a month past.

From Wilson county: The weather has been very bad for preparing for next crop, it having rained nearly all of the time for the last month. The condition of nearly all farmers who do not own their own land is very bad—in fact, they are bankrupt; and even a good many who own farms are badly behind, and cannot pay up before next fall, if then. One of the principal causes of this state of affairs is the very high price of meat last year, and, should it be as high again this year, the situation will be very bad for both farmers and merchants who have advanced to them.

SOUTH CAROLINA.

From Chesterfield county: Money is scarce with our farmers, but as a general thing they have their supplies, and, taking everything into consideration, we would call their condition improved. The weather has been remarkably wet and bad.

From Edgefield county: The financial condition of our farmers is better only in one particular, *i. e.*, they are much better supplied with provisions than they were last year. The weather for preparing for next crop has been bad, and but little work has yet been done.

From Lawrence county: It has been raining almost continuously since January 1, and very little work has been done on farms. There will probably be less fertilizers used this year than last. The financial condition of the farmers is much better now than at this time last year.

From Marion county: The weather for the past two months has been very unfavorable for farming operations, being rainy and cold. Farmers, however, are buying fertilizers freely, and preparing vigorously for the coming crop. We would consider their financial condition hardly as good as last year.

From Newberry county: The weather has been rainy and unfavorable for preparations for next crop. The condition of our farmers financially is about an average one.

From Union county: The poorer class of laborers and farmers lived out or used up their 1882 crop by the time it was made, and have little left to pay old debts, or to go on for 1883, consequently their credit is poorer, and times are apparently harder with them, if anything, than last year. The ruinous prices which the poorer farmers are obliged to pay for supplies on the advancing system is bound to keep them down. The weather has been very bad; too much rain.

GEORGIA.

From Clay county: I do not think that planters have any more cash on hand than last year, but they have an abundance of provisions, such as meat, corn and oats. Many planters have paid liberally on old debts, and I think on the whole their condition is much better than last year.

From Douglass county: The outlook for the coming season is favorable, and farmers are in a much better condition to make a crop now than last year at this time.

From Heard county: The indebtedness of our farmers is about the same as last year, and but for the low price of cotton they would have come out in very good shape financially. They are in better condition to make the next crop than they were last year at this time, owing to the fact that they have plenty of corn and more meat.

From Jefferson county: In a money point of view planters are worse off than at any time since 1867, but they have plenty of corn and forage with which to run their farms for this year, and will only have to buy a small quantity of meat. The low price of cotton will cause a material decrease in the acreage and a heavy fall off in the use of commercial fertilizers. Farmers will plant largely in corn.

From Oconee county: Planters have more grain and other provisions this year than usual, but they seem less inclined to pay their debts than we have known for years. They seem to be anxious to hold on to what money they have, and let their obligations stand over unpaid.

From Rockdale county: Our farmers are in better condition now than at any time since the war, having plenty of corn and fodder and more meat than usual. There seems to be a general disposition to use less commercial fertilizers than last year.

From Thomas county: The weather for preparing for next crop has been worse than we have seen for years. Planters are in better condition to make a crop than since 1865, owing to a plentiful supply of provisions, but I think there will be a decrease of at least 10 per cent. in acreage planted on account of scarcity of labor, as laborers are leaving us to work on the railroads and in the turpentine districts.

FLORIDA.

From Hillsborough county: Our condition financially, as compared with last year throughout the county, is very much better.

From Sumter county: Planters are better off financially than they were at the same period last year, from the fact that most of them have sold off part of their lands, which have appreciated greatly in value during the past twelve months, and are now easy financially and buy very few goods on credit.

ALABAMA.

From Blount county: There seems to be a general disposition to plant less cotton and more corn the coming season, owing to the low price of cotton. The weather has been very bad and retarded preparations for next crop.

From De Soto county: The financial condition of our planters as to ready money in hand is little or no better than last year, from the fact that provisions were so high that it took nearly the whole crop to pay for them. There is plenty of corn this year, which will enable planters to make next crop at much less cost than that of last year.

From Jefferson county: The financial condition of the population is deplorable throughout this section, farmers having nothing left of last year's crop, and some did not pay out. The causes are low prices for cotton and extremely high prices for provisions of all kinds. The outlook for this year is more cheerful, and though there is no money in the county we have plenty of corn, and our farmers have learned to live with less meat than in former years.

From Lafayette county: Owing to the high prices of provisions last year, and low prices of cotton, the financial condition of our farmers is not improved, except that it will be easier on them next crop, having made a good crop of corn.

From Lake county: While the condition of the planter, so far as ready cash is concerned, is no better this year than last, they all have plenty of corn, and in most instances meat enough to make their crops. The weather has been very bad for preparations for next crop.

From Lauderdale county: Our farmers have plenty of corn and fodder and some meat, and have better stock with which to make a crop this year than last. They have no money, as it took all they made to pay for last year's supplies. The weather has been bad so far and no work has been done toward preparations for a new crop, but everything considered I think they are at present in better condition to make a crop than last year.

From Montgomery county: Regarding the financial condition of farmers in our section, we would say that we do a heavy advancing business, and find a considerably less demand for money, a disposition toward independence and an inclination to dictate terms. They are well supplied with provisions, have considerable money on hand, and are generally free from debt. The weather for preparing for the coming crop has been unfavorable.

From Perry county: The financial condition of our farmers is very much improved; the present crop has reduced their indebtedness very much, and they are in a healthy condition, not so much in ready money as in the plentiful supply of provisions, which last year were very scarce. The weather has been very good for the past two weeks; previous to that time it was unfavorable.

From Tallahatchie county: Farmers have plenty of corn to last this year, and, generally speaking, are nearer out of debt. Money matters are easier, and supplies will be furnished on better terms and easier obtained.

From Tallapoosa county: At no time since the war has the condition of the planting interest been so favorable. There is 100 per cent. more corn and meat in this county than we have ever seen. Collections have been remarkably good, and in almost every instance the entire indebtedness for the past season has been liquidated, and 50 per cent. of old debts contracted prior to last year. The weather has been very unfavorable for preparing for the next crop.

From Tate county: The crop of this last year, coupled with the very heavy corn crop, enabled a great many of our planters to pay out who have been carried over since 1879. We have had very fair weather in which to prepare for next crop.

From Tuscaloosa county: The condition of our farmers financially is fully 30 per cent. better than at any time since the war. A great many have made their own meat, and corn is plenty. Very few are in debt, and fewer advances are being asked for than for many years. The weather has been bad, and little preparations made toward planting the next crop.

MISSISSIPPI.

From Alcorn county: There being a great abundance of corn and forage on hand to make the next crop, I think it can be made cheaper than any crop for cereals.

From Amite county: There are more breadstuffs in the county than twelve months ago, and farmers are in much better condition than they were a year ago for making a crop, if they can succeed in controlling labor. Repairing levees of the Mississippi river has caused some labor to leave the county.

From Attala county: What cotton now remains in the county is held by farmers who have some means and are out of debt. Farmers generally are in better financial condition than heretofore, being generally supplied with corn and meat.

From Benton county: Farmers, financially speaking, are in a worse condition this spring than usual. Times are dreadfully hard and money awfully scarce. Farmers are in a better condition this spring than last to make a crop, on account of corn being cheap and plentiful and more meat to start in with than last season. The weather has been very unfavorable since January 1. Cold, wet weather almost all the time.

From Carroll county: All small farmers and tenants have sold their cotton, and what little is here is in the hands of a few large planters, who furnished their hands, and who are not compelled to sell, and hence are waiting for the spring rise and better roads. We have corn plenty and some meat, and in this respect we are in a better condition than last year, yet there are few small farmers who are not behind with their merchants, especially where they had to buy corn or stock to plow last year, both being high.

From Choctaw county: Farmers in this section of country are much better able to make crop this year than they were last year. Plenty of corn and more meat.

From Coahoma county: Our winter has been cold and wet, and has been a bad season for gathering crops. Planters and labor as a rule are coming out behind on last year's crop.

From Coahoma county: Owing to the condition of our planters many will not plant all of their ground this year. They have neither the means or disposition to do so.

From Clarke county: Farmers are more in debt than at this time last year, but they have not seemed so eager to increase their indebtedness as in previous years.

From Clay county: Farmers and planters have a sufficient supply of corn on hand, and some meat; are in a better condition, financially, than for two seasons past, though cash surplus in hands of planters is small. Raining for past two weeks has retarded planting operations, although there is ample time yet.

From Clay county: Last season planters of this section, as a rule, decreased their cotton acreage and increased their acreage in corn and oats. As a consequence, there is an abundance of food for man and beast, which puts our people in an independent condition for making another crop. A still larger acreage will this season be put in corn and other grain crops to the reduction of acreage in cotton. A determined effort is being made to make the county self-sustaining as to food crops. Much attention is being paid to hogs and other stockraising, and the near future will see our section entirely supplied with "home-raised" provisions of every description, sufficient for home consumption, and then comes an era of prosperity for the south such as the country has never witnessed.

From De Soto county: The people are little better off than they were a year ago as to amount of ready money in hand, from the fact that bread and meat were so high last year that it absorbed nearly the whole crop to pay for supplies; but there is now an abundance of corn in the county, which will enable farmers to make another crop at much less cost than last year. If we make a good cotton crop this year, we will have a good deal of spare cash next fall.

From Grenada county: Planters are slightly improved financially, though they will be forced to buy largely of stock to cover the deficit of last year. Corn is more abundant than for years. We think the outlook for them is better than for the past two years.

From Itawamba county: Farmers are 20 per cent. better, there being plenty of corn to furnish the county and one-half enough meat.

From Jasper county: While planters made short crops and low prices last year, and most of them fell behind, still the financial condition is regarded as better, from the fact that we have for the last few years had to buy at least three-fourths of the corn from the west, but there is now plenty corn in the county to support it, and there is more meat than usual.

From Jefferson county: The financial condition of the population is deplorable, especially throughout this section; farmers have nothing left of last year's crops and some did not pay out. The causes are low prices for cotton and extremely high prices for provisions of all kinds. The outlook for this year is more cheerful, and, though there is no money in the county, we have corn plenty and our farmers have learned to do on less meat than in former years.

From La Fayette county: The financial condition of planters, owing to the high prices of breadstuffs last year, and low prices for cotton, is not improved, except that it will be easier on them next crop, having made a good crop of corn.

From Leake county: While the condition of the planter as compared with last year, so far as ready cash is concerned, is no better, yet they all have plenty of corn and, in most instances, meat enough to make their crops.

From Madison county: The short cotton crop, coupled with the low price of cotton, has placed the farmers in a very poor condition financially, and the country merchants foreclosing a great many trust deeds will shorten the acreage at least 10 per cent., forcing this class of farmers to go to railroading and other callings.

From Rankin county: Planters have some little more actual cash than for the past four years, and considerable more corn, potatoes, hay and molasses than they have had for a number of years past.

From Tallahatchie county: The farmers have plenty of corn to last this year, and, generally speaking, are nearer out of debt. Money matters are easier, and supplies will be furnished upon better terms, and more easier to be obtained.

From Tate county: The crop of this last year, coupled with the very heavy corn crop, enabled a great many of our planters to pay out, who have been carried over since 1879.

From Wayne county: Owing to the severe winter there has as yet been scarcely any preparations made for seeding, only such as small grain. The farmers, as a general thing, so far as I know, have planted more small grain than heretofore, and I think will plant more corn than usual. The high price of corn and bacon the preceding season has stimulated the people to this end.

LOUISIANA.

From Caddo parish: We raised a great deal more cotton this year than last, but it did not bring so high a price; planters were more extravagant in the fall in view of a large crop, and are now worse off than last year.

From Franklin parish: The weather for nearly two months past has been exceedingly bad. In consequence of the almost entire failure of the crop of 1881 farmers' expenses were very heavy for the year past, and January, 1882, found them in more than usually cramped circumstances.

From Jackson parish: The weather has been very bad for the past six weeks, allowing no preparations for next crop. The financial condition of the farmers is much better than for years, owing to the finer crops made last year.

From Morehouse parish: The financial condition is worse than for several years, owing to the low prices for cotton. The last crop was the most expensive one we have raised since the war.

From Ouachita parish: The weather has been very bad for the past two weeks. Our planters are making preparations to plant more grain and less cotton this season.

From Tensas parish: There will be no increase in acreage this year. There is not so much a scarcity of labor as of mules. Lands are in splendid condition. Breaking to the plough easy. All cramped for money, and advances hard to get on account of losses sustained last year by water. Labor easily managed, and from present outlook a fair crop should be made, and made cheaply.

TEXAS.

From Austin county: The financial condition of our farmers may be called good. Good, economical planters, Germans and Americans, are well off, and buy mostly for cash, but the negroes and white renters commenced buying on credit on the 1st of January, as usual. All have paid up well and provisions are plenty.

From Cherokee county: The present price of cotton will be the cause, beyond a doubt, of a considerable decrease in acreage in this county this year.

From Harris county: On account of continued rains, snow and sleet since January 1, there has been no progress whatever toward preparing for next crop. To make the crop of 1882 farmers were obliged to get advances of provisions from merchants at a cost of 50 to 100 per cent. above that of former seasons, and when their cotton was sold there was but little remaining for them after the merchants had been paid. This year there is an abundance of corn, and only meat will have to be bought.

From Henderson county: The weather for the past seven weeks has been very bad. We have had two snowstorms, and generally wet weather, utterly precluding the possibility of gathering the cotton now in the fields or preparing for another crop.

From Lavaca county: The improved financial condition of our farmers is not so much in the possession of more money as in their having less debts. But a small portion own their land free of incumbrance, and nearly all live upon the proceeds of the crop that is next to be planted. Prospects for the next crop may be considered good; the soil is in the best condition, and laborers plenty and in good health.

From San Augustine county: The financial condition of our planters is better than last year, from the fact that the inducements to buy on credit were not tempting, and many of them have received cash from the sale of lands and stock. The weather has been very wet since New Year's, and preparations for next crop are very much retarded.

ARKANSAS.

From Arkansas county: Preparations for the new crop have not commenced as yet, owing to the unfavorable weather. Farmers are a great deal better off financially than for many years past.

From Conway county: The weather for farm work has been unfavorable, and but little has been done toward preparing for next crop. The farmers have very little money on hand, but have plenty of corn and nearly enough meat to last them through.

From Crittenden county: Our farmers have an abundance of corn and but little meat. The bulk of the proceeds of the crop has been paid to settle old indebtedness, and many are behind yet, but on the whole we would consider their condition better than last year at this time.

From Hot Springs county: The weather has been very bad for gathering the present and for preparing for the next crop. The financial condition of the farmers, as compared with last year, is much better, provisions being plentiful.

From Randolph county: The financial condition of the planters compared with last year is much better; they have provisions enough to last them through next crop and are generally out of debt. Preparations for next crop have been somewhat retarded by the bad weather.

From Sebastian county: Our planters are in better condition than they have been for years; money is not plentiful, but most of them are out of debt and have plenty of corn, meat, etc., with which to make the coming crop. The weather thus far has been unfavorable for farm work.

TENNESSEE.

From Fayette county: Planters have more breadstuffs on hand, but less cash, than last year. They will make the coming crop at much less cost than the last one.

From Hardeman county: There has been no farm work done in this section since the 1st of January, on account of rain and cold weather. Though this county has made a short cotton crop and the price has been low, which makes money matters close, planters have plenty of corn, and nearly enough meat to last them through, and they are on a much better basis to make a crop than last year at this time.

From Hardin county: Our farmers generally have plenty of meat and bread, but very little money. Their condition for making a crop is much better than at this time last year.

From Madison county: The financial condition of farmers is a great deal better this year than last. They have plenty of corn, and will have to buy but little meat. The weather has been very bad.

From Rutherford county: Our county raised better grain and hay crops this year than usual; the crop of corn being especially good. They also have a good deal of stock which is bringing good prices, therefore our farmers are in better condition than for some years past.

OCCASIONAL NOTES.

An act has just been passed having in view the encouragement of the production, manufacture and commerce of cotton, and providing for the holding in 1884 of a "World's Industrial and Cotton Centennial Exposition" in some city of the Union to be selected by the Executive Committee of the National Cotton Planter's Association. The exposition is to be held under the joint auspices of the United States government, the association mentioned, and the city in which it may be located. Cotton in all its conditions of culture and manufacture is intended to be the chief exhibit, but it is designed, also, to include

all arts, manufactures and products of the soil and mine. The board of management is to be composed of United States commissioners, to be appointed by the President of the United States upon the recommendation of the executive committee of the association and of a majority of subscribers to the enterprise in the city where it may be located. Upon being informed by the board of management that provision has been made for suitable buildings for the purposes of the exposition, the President is to make proclamation of the same through the State Department, setting forth the time and place at which the exhibition will be held. By the terms of the act, the President is requested to send, in the name of the United States, invitations to the governments of other countries to be represented at the exposition. All articles imported for the sole purpose of exhibition are to be admitted without the payment of duty or of customs fees or charges. The passage of the act is mainly due to the energy and perseverance of Mr. F. C. Morehead, the president of the National Cotton Planter's Association.

The report of the controller of the state of Texas for the two fiscal years ending August 31, 1882, exhibits a very gratifying increase in property values. The assessments in that state for the year 1880 were $311,470,736; those for the year 1882 amounted to $419,925,476, showing an increase of $108,454,740 in two years. In regard to the investment of funds belonging to educational and other institutions, the report also presents some instructive figures of particular interest to Texans. A tabulated statement is given showing that the total face value of bonds purchased was only $894,836, while the amount expended for the same with high premiums was $1,146,260.82. The controller points out that at this rate the final consumption of the permanent fund is inevitable. He deprecates the purchase of bonds at a high premium, and suggests the passage of a law directing that in making such investments premiums and other costs shall be paid from the annual available funds of the special funds referred to. It appears that the taxes of the past year would not have paid expenses but for the excessive cash balance at the end of the previous year. The bonded debt of the state at the end of the last fiscal year was $4,576,638.21.

At a recent meeting of the Swansea Chamber of Commerce Mr. Chamberlain, the president of the British Board of Trade, stated that the reform of the bankruptcy laws was a subject of great importance, and would probably hold a prominent place among the measures of the present session of Parliament. His ideas upon bankruptcy reform were in the main identical with those recommended by the *Economist* in its articles upon the subject. Two main objects to be kept in view were, he said, in the first place, that dividends on bankruptcy estates should be as large as possible, and that the distribution of assets should be honestly and satisfactorily conducted; and, in the second place (and this was much the more important), that there should be fewer bankruptcies. Bankruptcies should not be the easy, convenient, agreeable and profitable processes that they were at present. In every case of insolvency there should be an inquiry into the cause of bankruptcy. He believed in treating an insolvency very much as the loss of a ship was treated at present. If after a careful examination of the circumstances leading to a man's insolvency it was found that he was an honest trader, and had been overtaken by misfortune, he should be allowed a discharge, and should be permitted to go into business again. If negligence were proven against him his discharge might be suspended, or might be granted subject to conditions, and if he were found guilty of fraud he should be subjected to punishment. In regard to the objection that this would be a return to the official system, he said that the old officialism which was objected to was an official administration of bankrupt estates. What he proposed, on the other hand, was an official judicial inquiry, which it was impossible to leave to creditors. If there was to be any system of judicial inquiry at all there must be officials, since the whole judicial administration of the law was official.

The *Spectator* is not in favor of the demand recently made in England for the creation of a special department of commerce and agriculture. It says that the whole government of the country and every department thereof is concerned with commerce and agriculture; that hardly any officer of state can do anything without touching those interests; that half the policy of the government is directed to the improvement of their condition. A foreign dispatch cannot be sanctioned, a budget arranged or a banking act considered without thinking of commerce, and every measure for the improvement of tenure, for the reform of county government or for the readjustment of rates directly, and in many cases perceptibly, affects agriculture. The greatest agricultural and commercial measures of our time, the *Spectator* continues, have been measures of high policy to be settled by government and parties, not by departments, and it declares that even the lesser measures now in front could not be safely left to individual ministers. The journal mentioned does not deny that, in matters of detail, commerce and agriculture, considered as interests, have something to complain of, and that a minister or ministers such as are recommended might collect scattered or indefinite information, might inquire more persistently into new openings for trade, and might stimulate the making of treaties with states to which public opinion will not continuously attend. But it thinks that, on the whole, a non-political department gets itself most admirably managed when it is in the hands of a minister who is a good administrator, who is just under cabinet rank and who is strong enough to weigh well with the government as a whole. As will be seen, the position of the *Spectator* is not one of antagonism to the commercial and agricultural interests, but only one of protest against making a department devoted to those interests a political office.

The *Spectator* confesses to a good deal of jealousy about additions to the cabinet, and thinks that under a proper arrangement that body would not be too full and would be filled by men of political rank who are more than heads of departments. These views are suggested by the existence of certain political tendencies which the *Spectator* adverts to as being of interest and importance. One of these is the growth in the power of the cabinet. "The tendency of our democracy," says the *Spectator*, "is toward cabinet government. The majorities grow larger—ten was formerly a working majority—the groups more numerous, the pressure of business heavier, the powers of private members less, till the initiative is being confined to the governing committee, which has, moreover, a working veto on all propositions. It is essential that this committee should be fairly homogeneous, not too much of a little parliament—we note that councils, now-a-days, sit long—and should consist of men not entirely worked to death, but with a little capacity left for initiating new things. Energy, too, and secrecy are increasingly necessary, and to secure all those objects a cabinet should be rigidly kept from unwieldiness." This increase of the powers of the cabinet, the journal quoted says, is not likely to stop a cabinet being the most natural instrument through which a democracy can govern. The other tendency referred to is the increase in the standing and therefore of the power of the minister. The fact is recalled that for nearly twenty years England has been governed by two men, each of whom was admitted on all hands to stand head and shoulders above his fellows. This growth of the personal ascendency of the premier, the *Spectator* thinks, is not a bad change in itself, but it increases the need of confining the cabinet to the powerful and of avoiding a dilution which would exaggerate the personality of the first minister.

The Manchester *Guardian* remarks that warrants of attorney are now being largely used by moneylenders in England as substitutes for bills of sale upon small transactions. A recent act put an end to bills of sale below £30, but those who had been accustomed to make large profits upon small loans were unwilling to give up their lucrative business, looked about them for some other forms of security, and hit upon this ancient instrument. These warrants are required to be registered, and can be searched for as liens. They are also being published in the usual trade lists and circulars along with bills of sale.

As an instance of the influence of industrial expositions in stimulating commercial activity, the *St. James' Gazette* remarks that the recent international exhibitions held in Melbourne and Sydney have led to the development of a considerable trade between India and Australia. Not many years ago, says the *Gazette*, the colonies sent very little to our great eastern dependency except horses for military purposes, while their imports from that country were comparatively trifling. But now not only does Australia receive large quantities of tea, but also considerable imports of Indian wool, hides, and wheat. At first sight it seems like sending coals to Newcastle to export the three last-mentioned articles to the colonies, but commercial experience shows there is a limited market for all of them. Indian wool and hides are lighter and cheaper than the Australian products, but better suited for certain useful purposes; while the wheat is required for seed and not for food. Australia anticipates that India will become a lucrative market for her exports of corn, wine and frozen meats.

From recent official returns of the wine harvest in Algeria it appears that the cultivation of the vine in that dependency shows rapid progress. This is in striking contrast with the condition of things in France, where, owing to the ravages of the phylloxera and the bad weather, a very poor showing has been made. The acreage under the vine exceeds that for previous years. The total yield of wine last year was about 9,500,000 gallons, showing a considerable increase over the returns for the preceding year.

The king of Corea, probably feeling it incumbent upon him to make some sign in view of the attention directed to his dominions in consequence of the events of last year, has issued a manifesto of some length, in which he rebukes his people for the hostility displayed by them toward his negotiations with foreign countries, and sets forth the principles which are to guide his external policy in the future. He reminds his people that their country is situated far away to the east, in a nook of the sea, and that hitherto they have had no relations or dealings with foreigners, for which reason they have neither seen nor heard very much. He refers to the ingenious and beneficial inventions of the kingdoms of the west, and points out to his subjects that "China, although she stands alone and preëminent among the nations of the world, still makes treaties with them on equal terms," and that Japan, which formerly repelled the advances of foreigners, has now formed compacts of friendship with them. The king announces that, in addition to his earlier treaty with Japan, he has established new treaties with America, England and Germany. While admitting that his action introduces an innovation, and that there is nothing to be astonished at in the dissatisfaction of his subjects, he exhorts them to consider the advantages to be derived from intercourse with the western nations, and while repelling their doctrines to learn to use or imitate their machinery. In conclusion, obelisks bearing inscriptions hostile to foreigners are directed to be removed as being unsuitable to the new order of things, and the proclamation is ordered to be placarded in prominent places over the length and breadth of the country.

The *Economist* thinks that the true constitutional difficulty of France is the position of the army. This formidable body, it remarks, has become the strongest corporation in the country, and it is the one of which the opinion is the least known. No one in Paris, continues the London journal, appears to doubt that if the army were strongly united in opinion and obeyed a single leader that leader could not only overthrow the government of the day, but could found a very strong and orderly government. Centralization has done its work so thoroughly in France that the country is deprived of resources for local resistance or even disturbance. It is the dread of a movement of the army which renders all republican governments weak, which makes them see powerful pretenders in princes without any civil following, and which makes crises like the present one so important. To this cause, too, the *Economist* thinks, may be attributed the panics which lead to so much distrust both on the Bourse and abroad. The London journal does not see much sense in the answer generally made by Frenchmen to such suggestions as it throws out, namely, that the army would not do it. It points out that the private soldiers, although drawn from all France, are mainly young unmarried men, ignorant, inexperienced and full of hatred for political inefficiency and slowness. They are not quite contented, are sometimes ill-treated by the people, and are not so much considered socially as under the empire. Their officers, again, form a corporation of a very peculiar kind, drawn (the majority of them, at least) not from the body of the people, but from the well-to-do classes. Their hopes are centered in the body of which they form a part, and their commissions are by law their property. They are not unwilling to see changes which would increase their consequence in the state. They have nothing to fear, but much to hope, from a change of government. As to whether a movement such as is hinted at above is possible at present the *Economist* does not venture to express an opinion, but it calls attention to the fact that the materials for a *coup d'etat* exist, lacking only the organization, which might be supplied by a military chief possessed of will, daring and genius for combination.

SPECIAL CORRESPONDENCE.

ENGLISH RAILWAY ACCOUNTS FOR THE PAST HALF-YEAR.

London, February 8.—Enough is now known for us to determine with fair accuracy the results of the past half-year's workings of English railways. The dividends as they have been announced have been received with very mixed feelings, some few being regarded as fairly satisfactory, while others have certainly been ill-received by the public. The traffic returns marked a moderate rate of improvement during the summer months, but as the winter drew on there was a general tendency toward stagnation, which in the southern counties of England degenerated into positive depression. In these counties the entire failure of the hop and fruit crops, and some diminution in the continental traffic, more than counterbalanced the beneficial effects of a better grain harvest, and it was certain long before the close of the half-year that the southern companies must fare badly in respect to their dividends. But better things were looked for from those companies serving the middle and northern counties, and the fact that some of the leading companies have not been able to maintain the distributions of twelve months ago has latterly resulted in a sharp fall in prices. The contrast of dividends below is given side by side with the capital expenditure, as indicating the relative importance of the different companies:

Railways.	*Capital expended.*	*Dividends second half of* 1880.	1881.	1882.	*Difference '82 comp'd with '81.*
Great Eastern	$38,038,900	3	3¾	3½	+¼
Great Northern	31,000,000	6¼	6½	6	−½
Great Western	60,323,587	5	7¼	7¼	....
Lancashire & Yorkshire	37,000,000	5¾	5¾	5	−¾
London & Brighton	22,764,360	8¼	8¼	6¼	−2
London & Northwestern	96,700,000	8	8	8	....
London & Southwestern	25,800,800	7¼	8	8	....
Manchester, Sheffield & Lincolnshire	25,852,093	4	4	4½	+½
Metropolitan	10,369,015	5	5	5	....
Midland	71,400,000	6¼	6¼	6¼	....
Northeastern	57,824,434	8½	8½	8¾	+¼
Southeastern	21,922,191	8	8	7	−1

In dealing with these dozen leading English companies it will be seen that in some instances the capital is given in round hundreds of thousands, the half-year's accounts not having as yet been published, but the figures entered represent the total expended to the 30th of June last, plus the official forecast for the half year. With regard to the dividends (which are, as is the custom here, all announced at the rate of so much per cent. per annum, so that exactly half the stated rate is payable for the half year), it will be seen that only three show any sort of increase, while there are four where a decrease has been notified, and those decreases are considerably the more striking. This leaves five companies which have announced dividends similar to those paid a year ago, but it is to be remarked that, even where the rate of dividend is actually maintained, the balances carried forward are hardly so satisfactory. Averaging these returns, we may conclude that the English railway dividends for the second half of 1882 represented 6¼ per cent. per annum upon about £160,000,000 ordinary capital, as compared with an average of 6⅜ per cent. for the second half of 1881. Thus a slight average reduction is observable which practically counterbalances the improvement on the first half of the year. As the first half is never so remunerative as the second it will give a better idea of the earnings of these companies if their payments are averaged over the entire twelve months.

ENGLISH RAILWAY—AVERAGE DIVIDENDS.

	First half, per cent. per annum.	*Second half, per cent. per annum.*	*Whole year. per cent. per annum.*
For 1880	5⅛	6⅛	5⅝
For 1881	4⅜	6⅜	5½
For 1882	4¾	6¼	5½

It will be gathered from these figures that the profits realized in the entire year 1880 have not again been equaled, but that was owing to the exceptional activity displayed in the first half of the year, thanks to the requirements of the United States. But the second half of 1882, it will be seen, does indicate some improvement upon the corresponding period of 1880, when the harvest was exceptionally deficient, and when the American demand had for the time subsided.

But it is too much to expect the general public to carry their comparison back further than the dividends they received twelve months ago; and here, although the traffic returns showed an average expansion of 2¼ per cent., the dividends are seen to be actually diminished. Working expenses have grown more than the cheapness of iron and other materials had led the public to expect, and altogether the new half-year has begun badly. The season is exceptionally open yet, railway traffic earnings are unusually stagnant, and if working charges are likely to continue increasing as they did last half-year, the prospects of 1883 are at present clouded. Nor can any encouragement be derived from the state of trade in the country; the goods and mineral earn-

ings are certainly being curtailed, and it is apparent that if traffic had suffered any obstruction through frost and snow, the present stagnation would have given place to a heavy falling off in earnings. About the best feature as regards working expenditure is that coal shows signs of cheapening, but this is more than compensated for by the distinctly increased burden of taxation the companies have to bear. Meanwhile, these companies are many of them showing signs of an intention to extend competition, and in the past year their rate of capital expenditure has increased. Not that, according to American notions, it is at all a high rate of additional outlay, but it is worthy of remark that many of the companies would spend more if Parliament permitted them so to do. Nowadays, however, much to the advantage of railway dividends, parliamentary supervision rejects about two-thirds of the applications made. Time was when the parliamentary committees passed almost all the applications made to them; but the crisis of 1866 and the threatened bankruptcy of a number of now prosperous lines showed plainly that such a policy had seriously injured the credit of the older companies and had created a number of "contractors' lines," which were almost hopelessly involved. From the passing of that remarkable measure, "The Regulation of Railways Act," in 1868, a different policy has been pursued, and at the present day, if a new line is shown to be required Parliament prefers intrusting it to the company already most intimately connected with the locality. This policy serves to check excessive competition; for competition, however healthful in moderate doses, has been as wasting to the railroad constitution in England as it is in America when taken in excessive quantities.

One feature of the past half-year calls for remark, and that is the steady expansion of the third-class traffic. Complete figures for the half-year are not yet available, but it is becoming apparent that the third-class is to be the mainstay of the passenger traffic. One instance will serve as a type of the rest.

PASSENGERS BY SOUTHEASTERN RAILWAY.

	No. of 1st class	*No. of 2d class.*	*No. of 3d class.*
1872	2,147,057	3,140,488	15,295,951
1882	1,550,217	2,939,706	20,411,360

At the same time the companies, it must be admitted, are adapting their accommodation to the altered conditions of the traffic, and the comfortable third-class carriage of the present day, attached to nearly all the expresses, is a very different description of conveyance from the old "cattle-pens" in which the parliamentary traffic used to be carried with as much added discomfort as the railway authorities could manage to cause the unfortunate traveler. It has taken the companies about forty years to discover that the third-class passenger cannot be driven into a higher class of carriage, and that unless people are able to travel cheaply a very large proportion of them will not travel at all.

GREAT ENGINEERING WORKS.

London, January 29.—The other night, in his inaugural address as president of the Institution of Civil Engineers, Mr. James Brunlees, in speaking of recent engineering works, gave an interesting sketch of some notable canals and bridges. He says the Panama canal, when completed, will be as important a link in water communication as the Suez canal. In this class of work and tunneling the ancients have probably not yet been outdone. History mentions two canals of great importance: one for uniting the Red sea with the Nile and another across the Isthmus of Athos, vestiges of which still remain. To carry off the superfluous waters of lake Fucinus the Emperor Cladius constructed a tunnel 38 feet high, 28 feet wide and 3 miles long, chiefly through solid rock. Setting aside explosives and machine drilling, the tunnel was evidently executed on plans quite similar to those which would be adopted in the present day. Another remarkable work of the ancients was the opening of a passage beneath the river Euphrates from one bank to the other, a distance of more than 130 yards. The course of the stream was diverted, and a tunnel was constructed of brick, cemented inside and out with asphaltum. The walls, which were 20 bricks thick, were 12 feet high to the springing of the arch, and the width of the tunnel was 15 feet. The president, among other splendid achievements of the past and present, said it was on the island of Pharos, opposite Alexandria, that the first lighthouse was erected by Ptolemy, nearly three hundred years before the Christian era. Winstanley's lighthouse at the Eddystone, the predecessor of the works of Smeaton of Douglass, was probably not more efficient than the Roman pharos on the heights of Dover. Even the problems regarding the disposal of sewage were attempted to be solved by ancient Rome, and dealt with by her engineers much in the same way as at the present day. A great "low-level" sewer, 30 feet high by 15 feet wide, received the drainage of a network of sewers coming from the city on the hills, and delivered the accumulation into the Tiber. It was the main artery of a system of sewerage and drainage which there had been no attempt to rival until the London Main Drainage Works were carried out. Among works that are proceeding and projected, Mr. President Brunlees mentioned the bridge to be erected across the Firth, at Queensferry, as the largest ever undertaken. It is to consist of two spans of 1,700 feet, two of 675 feet, fourteen of 168 feet, and six of 50 feet, with a clear headway for navigation of 150 feet above high water at spring-tides. The central pier to hold the enormous cantilevers and girders, on the island of Inchgarvie, will consist of four cylindrical masses of concrete, and measuring 45 feet in diameter at the top and 70 at the bottom. The length of the bridge will be upwards of a mile, and the viaduct approaches 2,754 feet. The contract has been undertaken for $4,000,000. Another remarkable work will be the new Tay bridge (the old one is not likely ever to be forgotten in the history of railway disasters), which is to be 10,780 feet long and divided into 85 spans. Before the committee of the House of Commons the estimate for this work was $3,278,000; but the contract for the work has been let for considerably less.

A work of a different type from these other bridges is the Kinzua viaduct across a long, narrow valley of the New York, Lake Erie & Western Railroad. I did not understand whether this bridge has been built or whether it is in course of erection, but it was referred to by Mr. Brunlees as a notable incident of engineering, its height being 302 feet from the bed of the stream to the rails, its length between the abutments 2,051 feet, divided into 20 spans of 61 feet each, and one span of 62 feet. He mentioned that, as an additional stay against the wind, the iron shoes at the bottom of the supporting piers or columns are bolted through the piers and braced together throughout their length. Passing over a short sketch of the East River bridge, New York, concerning which you are sufficiently well informed, the president reviewed the history of the Panama canal, a brief resumé of which, prepared for the private press of the society, is placed at my disposal. It is interesting at the present time to have the following points revived in the general memory as to the character and intentions of the scheme: The project to unite the Atlantic and Pacific oceans by a canal across the narrow neck of land which joined the two American continents was a very old one. During the last century and a half many surveys had been made in different parts of the isthmus to demonstrate the practicability of the project. Several schemes resulting from independent local investigations were before the public when Count de Lesseps succeeded in obtaining a meeting of an international congress in Paris, in May, 1879, to select the project which might be intrusted to a public company. This congress adopted the general features of the scheme now being carried out. It is to be a canal without locks from the Atlantic to the Pacific, 73,000 meters long, 8½ meters deep, and having a minimum width at the water-line of 22 meters. It will commence on the Atlantic coast, at the bay of Limon, with a depth of 8½ meters, and go through the marshes of Mindi, in the direction of the river Chagres, which it is to join in the vicinity of Gatun. It is to be kept up near to the river, which it will cut several times, and by a series of curves and straight lines will reach Matachin, where it will separate from the Chagres, and will continue in a southeast direction along the valley of the Obispo, a tributary of the Chagres. It will then enter the valley at the Rio Grande, and in a series of straight lines and curves reach the gulf of Panama, near the islands of Naos and Flamenco, with a depth of 7½ meters below the lowest tides. It is to be provided with passing places at suitable distances. The estimated cost of the canal is £31,200,000. It will abridge the voyage between Europe and the western coast of America at the equator some 2,500 marine leagues, and will considerably shorten the voyage to the eastern parts of Australia, to New Zealand, and to China and Japan.

Discussing the present aspect and prospects of railway engineering, the president of the Society of Civil Engineers says that there are upward of 900 miles of railway in course of construction in India; that an additional expenditure of over $4,000,000 has been ordered for New Zealand; that 342 miles are in course of construction in New South Wales. He omitted to mention the opening of a railway system in Newfoundland, but he expressed great satisfaction that in the United States and Canada the tendency is toward a uniformity of gauge. He encouraged his professional hearers by telling them that the fears that have been expressed in some quarters in anticipation of depression in the engineering world are not warranted. So long as capital accumulates in this country it must be expended in some productive way at home or abroad. Judiciously planned public works are always productive, and the men who found the means would appoint the agents to carry out the work. Not only are public works, including many new or larger harbors and docks, required at home; not only are new countries of vast extent and enormous resources being gradually laid open to the operations of the engineer, but a greater diversity of employment is continually offered to him. It is impossible to say to what uses the comparatively new power of electricity may be put, but it must play an important part in the social industrial economy of the age. This, by the way, is being daily evinced in all parts of this country, and within the next few months great developments may be expected, notably in the employment of electricity as a motive power on river, road and rail. J. H.

LEGAL NOTES.

The case of Speight vs. Gaunt, decided in the English Court of Appeal on the 20th ultimo, involved a point of great importance to both trustees and beneficiaries, and is likely to become a leading case upon the head of equity dealt with in it. The defendant it appears was the sole trustee and executor of a will, and wishing to invest part of the trust estate in municipal securities, he, with the consent of the beneficiaries, instructed one Cooke, who was at the time a stock broker of good credit and repute at Bradford, to invest the money in securities of Leeds, Huddersfield and Halifax. In due course the defendant received from the broker a paper purporting to be a bought note, and stating that the broker's firm had bought for the executor, subject to the rules of the London Stock Exchange, certain shares of stock. The defendant paid to Cooke checks for the total amount. It was soon afterward ascertained that Cooke had absconded, having used the money for his own purposes, and that he had never, in fact, bought the securities at all, but had put off the defendant with repeated excuses when asked for the bonds. Vice-Chancellor Bacon was of opinion that the defendant had not exercised proper diligence in his trust; that, as expert evidence proved, the bought note itself should have aroused his suspicions; that he ought not to have trusted his broker, and that he should be compelled to make good the loss to the estate. The Court of Appeal differed from the Vice-Chancellor in opinion, the Master of the Rolls holding that the principle as to the liability of a trustee making investments of trust funds was that he should conduct the business as any ordinary man of prudent business habits would conduct his own, and that it would be unreasonable to make him adopt further precautions in the performance of his thankless duty. The ordinary course adopted by persons investing their own money was well known to be by the employment of a broker in good credit, and paying over to him, upon receipt of the purchase-note, the amount required. It was not to be expected, and was, in fact, impossible that the client should watch over and check the action of the broker in buying from the jobber, and it was not the duty of a trustee any more than of any personally interested party. If the law were to be strained it must be for, and not against, an honest trustee. The court chiefly differed with the Vice-Chancellor as to the way in which the bought-note in the present instance was to be looked at. It should not be viewed as experts would scan it, to discover flaws, but as an ordinary business man would look at it, and in that view it was quite enough to make the defendant believe that the securities were bought. There was no obligation on him to distrust his broker's word, and it was only reasonable and usual to trust him. Lastly, it was clear that by no proceedings could he have recovered the misappropriated money, and in that, as in every other point, the case of neligence failed. Lord Justice Lindley protested against the notion that trustees are bound to guarantee the honesty of agents whom they properly and honestly employ for trust business. Lord Justice Bowen concurred, and stated the grounds for his own judgment as based upon the common-sense doctrine that a man who is employed by others to do a thing is himself liable: but one who is employed to get a thing done is justified in employing agents. He was of opinion that Mr. Gaunt acted properly and sensibly in employing a broker, and was justified in believing his representation that the purchase of the securities had been made.

An important decision was lately rendered by Judge Brown, in the United States District Court at New York, touching the right of the United States to collect taxes from state banks. Suit was brought by the government against the Nassau Bank to collect back taxes upon the aggregate amount of out-of-town checks, drafts and notes deposited with the bank for collection. The bank claimed that out-of-town checks and drafts were not deposits of money within the meaning of the statute, because they were uncollected and unpaid, and drawn upon drawees in cities, towns and places other than the city of New York, and that they were not subject to draft within the meaning of section 3,408 of the Revised Statutes. On the trial it was shown that depositors were not permitted to draw against uncollected out-of-town drafts, notes and checks, and that, although such drafts, notes and checks were credited to the depositor, it was only for convenience in bookkeeping. It was also shown by the bank that when the proceeds of the drafts, notes and checks were received by the bank they were included in the bank returns and that the regular tax was paid on them. Judge Brown, on the 16th inst., directed a verdict for the bank and dismissed the action, holding that out-of-town uncollected and unpaid drafts, notes and checks were not deposits of money, subject to draft, within the meaning of the section referred to. It is said that this tax has been imposed upon the banks and paid by them for years.

A point of some interest was raised in the Queen's Bench Division of the Supreme Court of Judicature on the 1st inst., in the case of the Quartz Hill Consolidated Gold Mining Company (Limited) vs. Eyre. The action was founded upon the allegation that the defendant had, maliciously and without reasonable and probable cause, presented a petition for the compulsory winding up of the plaintiff's company, and had advertised that petition in certain newspapers, and had, by so doing, injured the credit of the company. The defendant denied the malice and damage alleged, and averred that he had reasonable and probable cause for what he had done. The defendant, it appeared, had taken a number of shares in the company, and when the petition was presented, had entered into a contract to sell his shares, though it was contended on his behalf that at the time he really believed that he still held the shares. It was admitted that some of the earlier proceedings in connection with the company were indefensible. Mr. Justice Stephen, after remarking, in the course of a long argument, that the case was very novel, very difficult and very curious, finally decided to nonsuit the plaintiff.

The Supreme Court of Indiana decided on the 14th inst., in the case of Arnold et al. vs. Wilt, that, in an action on a promissory note, evidence showing that the note was executed to the agent of a marriage benefit association for certificates therein, that the association ceased business within a few days after the execution of the note, and that the certificates were of no value, was sufficient to show a failure of consideration.

When a part of a cargo of imported fruit is damaged the reduction of duty must be calculated on the cargo as a whole, and not on that part of the cargo which consists of the species of fruit that is damaged. The above point was decided by Judge Coxe, in the United States Circuit Court at New York, on the 19th inst., and sustains an opinion upon the subject formerly given by Attorney-General McVeagh.

BUSINESS NOTES.

A French wine journal, the *Moniteur Vinie*, is authority for the statement that the average annual yield of wine during the last five years in the following named countries has been as follows:

	Gallons.		*Gallons.*
France	894,000,000	Germany	53,309,500
Italy	720,404,000	Switzerland	23,775,000
Spain	581,174,000	Russia and Turkey in Europe	56,378,700
Portugal	48,116,000	Greece	33,303,500
Austria	634,000,000	Roumania	57,484,500
		Total annual average yield countries named	3,961,946,700

The number of failures in the United Kingdom reported to *Kemp's Mercantile Gazette* during the week ended February 3 was 273, against 256 in the preceding week, 233 in the corresponding week 1882, and 292 in the like week 1881. Of this number England and Wales had 248, against 209 and 269 respectively in the weeks ending February 3, 1882 and 1881; Scotland had 20, against 20 and 17, and Ireland had 5, against 4 and 7. The grocery and provisions, building and liquor trades, in the order named, suffered the greatest number of financial disasters.

It is suggested by the *Freeman's Journal* that a canal from Dublin to Galway, Ireland, 100 miles in length, would shorten the passage to America by a day and reclaim 1,000,000 acres of land. It is added that the surplus labor of the island might thus be profitably employed for years, and afterward settled on the reclaimed land. The cost of the undertaking is placed at £50,000,000. The "only difficulty" mentioned is that the English government "never would be induced to do anything big and really effective with regard to Ireland."

The London *Labour News*, under date of February 7, states that the labor market in the United Kingdom, generally speaking, continues very active. Some disturbance has been caused by demands here and there for shorter hours and higher wages, and in a number of cases arrangements have been made. Among railway employés the outlook was for serious disputes. The manufactured-iron trade was improving and steam coal-pits were working on full time. In the textile trade improvement was noted. There was a fair business in Brussels carpets at Kidderminster, but rug manufacturers report trade rather slack.

Considerable surprise has been excited of late by the quantity of fresh meat exported from northern Portugal to the United Kingdom. This trade has been profitably conducted for some time, and the British consul at Oporto set himself to work to find out the meaning of it. In his report he attributes the success of the Portuguese in this direction entirely to the use of the "furze-bedding system." This system releases for food purposes all the straw produced on the farms, and restores to the soil valuable constituents of which the operations of husbandry rob it every year. The report states that "lower wages and more equable climate" have a more apparent than real "connection with the matter," and that the Portuguese farming system itself is "generally backward, ignorant and defective." A trial of the furze-bedding system is now suggested in England.

It is now confidently believed that her majesty Queen Victoria will be able to open the "Great International Fisheries Exhibition" at South Kensington, on May 1, which will remain open for six months. All the space has been applied for and assigned to the various countries who will exhibit. All kinds of apparatus used in connection with the fishing industries will be exhibited. Fishing-boats, fish-nets, lifeboats, full-sized fish markets, refrigerating vans for the conveyance of fish, fishermen's cottages, fish-curing establishments, steam dredgers and steam foghorns will all be on view. A contract has been entered into for the erection of tanks and for 100,000 gallons of salt water in which the live fish themselves can be exhibited. The buildings cover seven acres, and a floor space of 230,000 square feet will be afforded. The guarantee fund amounts to £23,000, and the cost of the buildings will be a little less than £20,000. Financially then the affair is well equipped. The Glasgow *Herald* says that America is spending £10,000 on her exhibits, and Russia, Norway, Sweden, the Netherlands, Belgium, Canada, Newfoundland, Australia, China, the Straits Settlements and Japan will probbly swell the amount to £100,000.

After the war with Egypt it was believed in London that Egyptian ivory would be as freely offered as ever. Judging from a report made at the last quarterly sales of ivory at London, however, such is not the case. There was a good quantity on hand at the sales mentioned, but it was due to representatives of the trade having been in Egypt and having scoured that country for supplies. The belief is now prevalent that for six months to come Egypt will not furnish much ivory. It is supposed that it is heavily mortgaged and can only be released as the owners are financially able to meet their engagements. Never has there been such poor Egyptian ivory offered in London as at present. The buyers state they were at a loss how to value it, on account of its great age and poor preservation. Prices ruled about the same as at Liverpool. Billiard-ball and bangle sorts were a little easier; "hollows" of all descriptions were dearer; small tusks fetched full rates; best African was easier; common quality fetched generally good prices. The Egyptian ivory, poor as it was, sold for £750 per ton. Prices advanced as the sales proceeded, and some ten tons were withdrawn at higher prices than prevailed at the outset.

The following national banks have been organized: The First National Bank of Felicity, Ohio; capital $50,000; David H. Hoover president; Samuel T. Waterfield cashier. The Delphos (Ohio) National Bank; capital $60,000; Theodore Wrocklage president; Joseph Boehmer cashier. The Traders National Bank of San Antonio, Tex.; capital $100,000; J. M. Brownson president; James S. Thornton cashier. The First National Bank of Marshall, Mo.; capital $100,000; James W. Goodwin president; A. S. Van Anglen cashier. The Valley National Bank of Des Moines, Iowa; capital $150,000; J. J. Town president; William D. Lucas cashier. The Hot Springs (Ark.) National Bank; capital $50.000; Andrew Bruon president; R. E. Jackson cashier. The Bank of Harrisonville, Mo., has been incorporated with a capital stock of $20,000. The charter of the First National Bank of Grand Rapids, Mich., has expired, and will be succeeded by the Old National Bank, whose paid in capital is $400,000, which amount is to be speedily doubled; S. L. Withey president; J. M. Barnett vice-president; H. J. Hollister cashier.

The Mercantile National Bank of New York city has elected William P. St. John president, C. P. Burdett vice-president, and T. B. Schenck cashier. The National State Bank of Oneida, N. Y., has elected S. H. Farnam president in place of S. H. Fox. The National Broadway Bank of New York city has elected J. L. Everett second vice-president and A. T. J. Rice cashier. The Wall Street National Bank of New York city has elected C. F. Timpson vice-president and J. P. Dickinson cashier. The Fort Stanwix National Bank of Rome, N. Y., has elected H. G. Utley president. The Central National Bank of Troy, N. Y., has elected Moses Warren president in place of G. C. Burdett. The Manufacturers' National Bank has elected George P. Ide president in place of H. E. Weed. The Mechanics' National Bank of Trenton, N. J., has elected D. P. Forst president. The Allegheny National Bank of Pittsburgh, Pa., has elected W. McCandless president in place of J. W. Cook. The Commercial National Bank of Reading, Pa., has elected William Young president. The Winsted (Ct.) National Bank has elected Thomas M. Clarke president in place of J. W. Wetmore. The Machinists' National Bank of Taunton, Mass., has elected Edward King president in place of C. R. Vickery. The First National Bank of Smithfield, R. I., has elected John W. Slater president in place of W. S. Slater. The First National Bank of McConnellsville, Ohio, has elected James K. Jones president in place of A. Alderman. The Merchants' National Bank of Toledo, Ohio, has elected R. V. Boice president in place of W. O. Parker. The First National Bank of Mount Vernon, Ind., has elected A. C. Williams president in place of J. M. Lockwood. The First National Bank of Rochester, Minn., has elected John R. Cook president in place of F. S. Cook. The First National Bank of Topeka, Kan., has elected James D. Burr president in place of T. Curran. The Salem (Ill.) National Bank has elected J. S. Martin president in place of J. J. Bennett. The First National Bank of St. John's, Mich., has elected Josiah Upton president in place of C. Kipp. The Deseret National Bank of Salt Lake City has elected H. S. Eldridge president in place of W. H. Hooper. The Merchants' National Bank of Savannah has elected George L. Cooke president in place of H. Brigham. The Planters' National Bank of Richmond, Va., has elected J. B. Pace president in place of C. E. Whitlock. The Bank of New Hanover, Wilmington, N. C., has elected Isaac Bates president.

Several months ago BRADSTREET'S gave early information respecting an apparently somewhat chimerical plan for building a railway from the eastern shores of the Mediterranean sea to the Persian gulf, to be known as the Euphrates Valley Railway. The argument at that time advanced in support of the project consisted mainly in the alleged advantage to Great Britain of a route to India, which would shorten the journey thither about a week, by which to transport perishable freight, the mails, light express packages, and troops in case of necessity. Further, it was claimed that the strategic advantage of the Suez canal would be nullified, and that neutral waterway thus withdrawn from the possibility of entangling nations in case of eastern complication. Not much has been heard of the project to build the Euphrates Valley Railway since that time, and it has been supposed that, like the plan for constructing a canal from the English channel to the Mediterrranean, across France, it had been allowed to sleep a long sleep. It appears, however, that a Mr. Cazalet, who contested Mid-Kent, England, at last election, addressed a liberal meeting at Tunbridge Wells recently, and in the course of his remarks gave an account of the progress which had been made "on negotiations between the Turkish government and himself in regard to his scheme" for constructing the Euphrates Valley Railway. As may be recalled, the proposal is to connect the eastern shores of the Mediterranean with the Persian gulf by a line commencing near Tripoli, thence running to the river Euphrates by the way of Aleppo. From this point it would follow the right bank of the Euphrates to the town of Het, whence one branch would cross the river to Bagdad, and the other would terminate in the port of Grane, on the Persian gulf. In order to overcome the difficulty of raising the necessary money to carry out the project, he had added to the original plan a scheme of colonizing the fertile country along the route with Jewish immigrants from Russia and Poland. He has, therefore, applied to the Sultan for a concession of two miles on each side of the railway. He says that a short time ago his agent at Constantinople signed a convention with the Turkish Minister of Public Works for the first section of the line, together with the grant of land, and the council of ministers have affixed their signatures to the document. It now awaits the signature of the Sultan. Mr. Cazalet is confident of obtaining the Sultan's signature, notwithstanding the intrigues at Constantinople against him.

The pneumatic or compressed air motor has been attracting a good deal of attention of late. Although the rather elaborate project of running and regulating clocks in Paris by compressed air, lighting the houses and thoroughfares of the city by electric light, and utilizing other motors for commercial purposes by a general distributive system, has not been carried out in full, owing to a variety of causes, still, the pneumatic system of regulating and running the Parisian municipal and other clocks in that city has been largely adopted and is said to be a great success. It is announced that no fewer than six thousand clocks of various kinds, chiefly exposed to public view, are regulated in this way in three of the most populous *arrondissements* of the capital. A short delay will now suffice to establish the system in all the other districts, including the whole area within the fortifications, and even to extend it to some of the principal suburbs. Already about 600,000 feet of conduits have been laid, and one of the branch stations for storing the air has been completed and fitted up for use. The principal works at which the compressing process is performed occupy an area of about 7,000 square yards. The air is compressed to a normal pressure of six atmospheres, but the force actually employed in the local service is not so much as half of this. The intention is that when the city has been fully supplied with conduits and accumulators the motive force will be supplied at a set price, as in the case of water and gas. A company has recently been formed in New York to accomplish similar results with respect to clocks by means of electricity instead of compressed air. The recent advances made in supplying electro-motors of greater efficiency and at comparatively low cost render it highly probable that the electric time-regulators will, in the long run, prove far superior to the pneumatic system. The compressed air motor, however, has advantages which have yet to be fully utilized. The Western Union Telegraph Company in New York recently announced its intention to lay two brass pipes, three inches in diameter, from its Twenty-third street office to the main office at Dey street and Broadway. These will be utilized to send messages (bodily) to and from, thus saving the expense of extra operators up-town, and the delays of re-transmission down-town. Two minutes will suffice to "blow" the message in a little leather box, which will fit the brass pipe, from Twenty-third street to Dey street. In this way the Twenty-third street station of the Western Union Telegraph Company will be utilized to collect the messages left at offices nearer it than to the main office, and also to distribute to the same localities. It would appear that District Messenger Service, so far as notes and letters are concerned, might employ this method from some central point up to one down-town. The experience of the Western Union with the pneumatic system in delivering and receiving dispatches to various newspaper offices and from several of the commercial exchanges, has fully demonstrated its efficiency.

LOCOMOTIVE FIRE-BOXES IN AMERICA AND ENGLAND.

"Go from home for news of home," if not the exact words of a familiar proverb is the spirit of it, and a striking illustration of its truth has this week come to our attention. At the last meeting of the British Institute of Civil Engineers Mr. John Fernie read an interesting paper on "Mild Steel for the Fire-boxes of Locomotive Engines in the United States of America." According to this paper the use of mild steel for the purpose named is now general on our side of the Atlantic. Although large numbers of the outer shells of the boilers were still made of iron plates, this was simply to effect a saving of expense, and many railroad companies had the boilers wholly of steel. Iron plates were first used as a substitute for copper, owing to the rapidity with which the anthracite coal wore away the soft copper. When sound, the iron plates gave better results, but the weldings were frequently unsound; they were apt to blister and the plates were likely to crack near the fire-bars. Steel fire-boxes, the plates being a nearly pure compound of iron and carbon, were used for the Pennsylvania Railroad engines eleven years ago. Since then excellent steel for this purpose had been made by the Siemens-Martin open-hearth process in many places in the United States. The mode of manufacture of this steel was briefly described, as it differed from English practice. The specification for boiler and fire-box steel last given out by the Pennsylvania Railroad Company was quoted. The author next proceeded to state that in the cities of the United States all steam boilers for stationary engines were placed under municipal regulations, whereby a proper registration and inspection were instituted at a small cost to the user. In Philadelphia about 4,000 boilers were tested once a year, and a license was given by the inspector to use the boiler for one year at the pressure it was considered fit to sustain. The formulas under which the calculations were made and the tests employed were stated. The highest test was when a boiler-plate, from which a portion was cut off lengthwise, showed a ductility of 20 per cent. upon a measured length of twelve hicknesses of the plate, and when cold would bend to 180° over a diameter equal to two thicknesses of the plate, or when cut crosswise would bend cold to 90° over a diameter equal to five thicknesses of the plate. In every steam vessel navigating the lakes, rivers and seas of the United States, and sailing under its flag, a complete system of inspection during manufacture, and an examination of boilers when made, was maintained by the government, and all boiler-plates had to be branded with the maker's name and with the tensile strength of the plate per square inch. Makers of boiler-plates were pecuniarily liable for any failure of the material if it occurred at a lower strain than that with which it was branded. Officers for examining and testing the materials and work done were appointed, and the question seemed to be much better understood and practiced in the United States than in England. With respect to locomotive engines, which were in one city one day and in another on the next, and which might constantly be moved out of one state into another, there could be no municipal or government control, but there was a healthy public opinion on the subject, and heavy damages would be obtained against any company whose boilers exploded from neglect or from the use of bad material. In America, it was stated, railroad engineers were not hampered by government control. There was no necessity to urge railway companies to adopt improvements. Inventions were quickly examined, tested, and rejected or adopted; hence the march of improvement was more rapid than in Great Britain. The author then proceeded to describe, first, the English type of locomotive fire-box, and afterward the various new forms of American fire-boxes. In the former the strains set up by the greater expansion of the inner box over the outer, from the higher temperature, were aggravated from the material being of copper, which expanded more than iron under equal increments of temperature. Greater stress was thrown upon the stays, and by the use of copper and brass tubes a galvanic action was established in locomotive boilers, which speedily destroyed the iron plates. The author illustrated the American type by two examples of boilers and fire-boxes in use on the Pennsylvania Railroad, and he pointed out in how far they approached the conditions of what he held to be a perfect fire-box of the old and well-known form. The requirements for a fire-box of this kind were that the plates forming the outer and inner boxes should be of similar metal; that as the metal of the inner box must always expand more than the outer it should be thin enough to bend or spring between the spaces where it was held by the round stays; that to compensate for the extra expansion the heavy roof-beam stays should be done away with; that there should be a number of water-tubes through the body of the fire-box; that the fire-bars should also be water-tubes; that the areas of the fire-box and grate should be large, and that the materials of construction should be cheap and easily obtainable. The author demonstrated that in these respects the American was far in advance of the English type of locomotive boiler.

FINANCIAL.

THE NEW YORK LOAN AND INVESTMENT MARKET.

We are one day short this week, the legal holiday of Washington's birthday having come in to give an extra interval of reflection to bears and bulls—if any of the latter are to be found in the street now. There cannot be many. One of these gave voice to his gloomy feelings in a newspaper interview a few days ago, and summed up the situation, so far as he was personally concerned, very tersely. "I am a bull naturally," said he, "and have been trying to trade that way, but it's no good. There is no show for a bull in Wall street in these times." That means that Wall street just now is under a cloud. When the bear side is uppermost as it is now, the situation is gloomy. The professionals only are left, and the circle of these is small. The Stock Exchange has to live on the great buying public, and buying stocks means to bull them. There is no one to buy stocks now except the "shorts." That is starvation for the commission houses, which draw their chief sustenance from the great American public — meaning the outsiders. The market is and has been active enough; the transactions of each day are up to the average, but the circle of traders is so restricted. Very often one hears the question, and not seldom sees it in print, "Who is buying all these stocks?" People see that 300,000 shares have been traded in during the day; and the market, perhaps, has been declining from the opening to the close. They argue very properly that some one, they don't know who, has had to buy 300,000 shares; but from this they jump to the false conclusion that the big operators are buying stocks, and when they have got a sufficiently large line they will combine and turn the market. Now, it may well be that one of the big operators may buy 75,000 shares of stock in one day, and yet at three o'clock his books will show that he does not own a single share. If he has previously "sold short" this 75,000 shares, his buying results merely in his getting that number of shares, which are at once delivered to the people he had borrowed the stocks of when he sold, the stock having to be delivered to the buyer all the same, whether a sale be of stock actually in possession or a "short" sale. The contracts being covered by the delivery of the borrowed stock, both parties are clear, and the big operator is ready to put out another "line of shorts." Thus, Union Pacific may decline from par to 91 in a week, and an immense quantity of the stock be bought by some operator to cover shorts between 91 and 93; but, having delivered his borrowed stock, he owns no Union Pacific. Thus the market works down and down, as it has been doing since the failure of the attempt to work up a January boom; and now, when the whole list is down from two to ten per cent., the relative positions of the operators on either side may not be changed. Whoever bought stocks to hold has lost money; those who sold them short have made it.

The fatal element in the situation is that apart from the "shorts" there is no one to buy stocks—even good stocks, like Chicago, Burlington & Quincy, or Rock Island—when some one who is forced to sell wants to dispose of his holdings. The weakness in the first named of these stocks is, as before said, attributed mainly to the fact that Mr. Vanderbilt has a block of 25,000 shares which he is selling. If the market were in good shape it would be easy work for any good broker to have disposed of the whole lot without depressing the price 2 per cent. Rock Island has shown great weakness also during the past week, and it may be that some of the large holders of that are selling out. In times like the present, with failures of great iron companies occurring, trade dull, collections slow, and what would be bad enough in itself made worse by the tariff agitation, men of large means find themselves often forced to realize on their investment securities, and come into the market with a good-sized proportion of their stocks and bonds. These, being the most readily negotiable of their investments, naturally are first turned into cash. That accounts for the way some classes of good securities, acknowledged to be such, will have a most alarming drop in price, for just when their owners find themselves forced to sell is the time when the fewest people are inclined to buy. At this time no stock which could be borrowed on the market for delivery would maintain its price if the bears went to selling it. Some of the Vanderbilt stocks have shown much steadiness of late when the rest of the market was falling. The secret of it was that the stocks had been temporarily taken out of the street; the short sellers could not borrow for delivery, and trading in them almost ceased. This, however, was merely a piece of market manipulation of somewhat doubtful expediency. The men who held the stock did not hold it for investment, but on margin, and forbade their brokers to lend it for the purpose of making the shorts cover and maintaining an appearance of strength. For bridging over a short bear spasm of the market this would be a good trick; but the market looks now as if it had a tolerably permanent spasm on it, and some time the holders of the stocks will have to sell. Then there will be a bad tumble in the quotations.

It is wearisome to keep on saying the same thing—the market is falling. That is what it is doing, has been doing, and there are at present no facts in sight to show that it will not go on falling, although there was a sharp upward turn yesterday, due to the market having been heavily "over-sold." It is almost waste of time to discuss the causes of this or that particular stock declining, because the whole market is affected with the same general malady, and the malady is to be found in the condition of trade throughout the country, the building of 11,000 miles of railroad last year, and the conviction dawning on the public mind that—as usual under such circumstances—everything was overdone in the "booming" years from the fall of 1879 to the middle of last year. If the railroad enterprises started a year or two years ago could have been stopped last summer they would have been; but they were too far advanced; the projectors were in too deeply; and to prevent utter loss they scraped together money or got credit to carry them through, and the 11,000 miles of road were built. They have yet to be paid for. The main discussion in the street now is, are we or are we not in the same condition as we were when the panic of 1873 came on? It may be imagined what sort of a feeling is prevalent when such a topic is uppermost. The best opinion seems to be that though there has been wild extravagance in railroad extension, and we are suffering from short crops—the crops of 1881 were a failure and the corn crop of last year was short—yet the country generally is in a much sounder condition. Much—very much—depends on what sort of a crop we shall have this year. If we have a good one, it will go far to setting us firmly on our legs again, for it is certain there will be a large European demand and good prices for it. On the other hand, if it be short, the Lord help Wall street! Seats on the Stock Exchange will not be quoted at $30,000 bid. At this time, the general outlook is as bad as a February outlook generally is, that month being known on the street as a bear month. We have floods of disastrous extent in one direction, and frightful snowstorms putting an embargo on railroad traffic in another, and costing the companies enormously to clear their tracks. The general manager of the Rock Island road said publicly a few days ago that so far the year 1883 had been a disastrous one to the railroads, and unless there was soon a change for the better some of them would go into bankruptcy. Comforting sort of talk that for people "long" of stocks! The thing will have to run itself out. If Congress finishes up its business and adjourns in good shape; if the weather grows mild and the storms cease; if the floods subside and the snows melt slowly so that no second lot of floods come down from the northwest; if failures do not occur and business improves, then a much better feeling will be manifest in the public mind, and Wall street, reflecting it, will throw off much of its gloom, and the bulls in stocks will again "have a show." So far this year the current of events has been all against them.

Loans on call rose to 4 per cent. on Tuesday, which was higher than it had been, 3 to 3½ per cent. being the rule for two weeks or more previously. The bank statement was accepted as an admonition that we are moving toward the time when loanable funds become scarce at this center, and loans on time cannot now be had for less than 6 per cent. At present, however, there is plenty of money on call for the brokers, and the banks are better off than they were at the same time last year. Foreign exchange still keeps up higher than it should be according to our imports and exports, and the street is puzzled as to the cause, unless it be the continuous selling of our securities by foreign holders. Posted rates yesterday were $4.83½ and $4.86½ for long and short sterling respectively. Actual rates were $4.82¼ @ $4.82¾ and $4.85¼ @ $4.85¾.

The government bond market has been unusually quiet during the week. The closing quotations yesterday were:

	Feb. 16, bid.	Feb. 23, bid.	Feb. 23, asked.
U. S. 4s extended (3½ p. c.)	103¾	103¾	—
U. S. 6½s 1891, registered	112¾	112⅔	112⅞
U. S. coupon	113⅜	113⅜	113⅞
U. S. 4s 1907, registered	119⅝	119½	119⅝
U. S. 4s 1907, coupon	119⅜	119½	119⅝

The bank statement of Saturday had a disagreeable effect on the street, for the shrinkage in the surplus reserve was $2,744,875—a large sum, which, following on the decrease of the previous weeks, brought down this reserve to $3,674,825; which, however, is considerably larger than it was at the same time a year ago. The following are the comparative totals of the statements of February 10 and February 17:

	February 10.	February 17.	Differences
Loans	$321,491,200	$323,352,100	Inc $1,860,900
Specie	62,452,500	59,999,300	Dec. 2,403,200
Legal-tenders	21,704,800	21,353,700	Dec. 441,100
Deposits	311,110,400	310,712,700	Dec. 397,700
Circulation	16,463,700	16,384,400	Inc. 79,300

The proportion of total reserve to liabilities is now 26.18 per cent., as against 25.35 per cent. a year ago.

By Telegraph from New Orleans, La.: Louisiana sevens declined one-quarter point and premiums three-quarters. Failures throughout the country causing uneasiness in financial circles.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

The telegraphic reports to BRADSTREET'S from the leading trade centers of the country show a widespread improvement as regards the outlook for the spring trade. A better feeling is noted in New York dry goods circles, but the trade is late. The February cotton report to BRADSTREET'S indicates that on February 15 the cotton remaining unsold on the plantations amounted to 10 per cent. of the entire crop. The reports show a general improvement in the financial condition of the southern planters save in North Carolina. Bad weather is causing delay in the preparations for the next crop. Wheat has declined in the past week from 1½ to 2c. per bushel in American markets, partly as a result of better weather throughout the west and partly as the result of the depressing influence of recent heavy failures at the west, which have had a depressing effect upon the speculative markets for grain generally. Corn declined slightly from the same causes that affected wheat, but the active consumptive demand for that grain sustains the market. Provisions have advanced slightly, partly as the result of diminished receipts of hogs at the west, and partly in consequence of speculative buying at Chicago. The iron market continues very dull and uninteresting. American pig of known brands is well held up in price, but cuts have been made in inferior or less popular qualities. A recent canvass of American mills reveals the fact that stocks are very low indeed—in fact, of a quantity sufficient for immediate requirements only. Furnaces are keeping close down to orders, and there is everywhere manifest a disposition to hug the shore until Congress shall have taken some decided action on the tariff, or shall have considerately left all action undone and gone home. Bar iron, common and refined, is quiet, and quotations for small lots are 2.2 @ 2.3c. and 2.5 @ 2.6c. respectively. Steel rails are lower, if anything. They are nominally quoted at 39 @ 40c., but concessions can be obtained if large quantities are ordered. Anthracite coal is quiet. There is a fair demand only, which is to be expected at this time. A final decision respecting rates for the spring season is not expected before the 1st of April, hence season contracts are not expected prior to that date in any quantity. Prices are lower now than for some time past and are undergoing that process of general reduction which is common to the period first preceding the opening schedule for the year. Prices for certificates of crude petroleum are oscillating at a fraction below $1, with no special animation and no features of interest in sight. There are no oppressive movements on foot, so far as reported, and the apathy of speculators is one of those things which can be explained only by future developments. Crude in barrels is higher than last week. Refined has likewise been advanced during the week, having been met by a better demand than existed on Friday last. Ocean tonnage is in fair supply; demand is moderate, and rates are lower. Wool has continued in good demand, but the reduction in stocks and advance in prices has caused some falling off in the aggregate sales as compared with the preceding weeks of the month. There were 204 failures in the United States reported during the past week, 17 less than the preceding week, 69 more than the corresponding week of 1882 and 64 more than the same week of 1881.

BREADSTUFFS.

During the last few days the foreign markets for breadstuffs have shown less strength, and, while there has been no considerable decline in prices, the foreign markets have to some extent responded promptly to the decline in American markets on Wednesday, caused by the better weather both in this country and in Europe. There is also a prospect of increased supplies of wheat to western Europe in the near future from India and Russia. From the former country the movement of wheat has recently increased some. Advices from Odessa of February 7 reported the ice in the bay breaking up, with a probability of a resumption of navigation very soon. The amount of wheat in store in Odessa—as stated in BRADSTREET'S two weeks ago—is larger than last year. The crop of 1882 throughout Russia is also now believed to have been above an average, and it is estimated that the exports from all Russian ports from January 1 to August 1 will reach say 40,000,000 bushels, which would be considerably above the average exports of Russia during the corresponding periods of past years. Aside from the features above mentioned there is nothing in the general situation abroad to warrant the expectation of lower prices for breadstuffs. Notwithstanding the recent improvement in the weather there, the general prospect for the next wheat crop is but little improved, and the most careful estimates place the probable acreage, after making due allowance for the re-sowing of wheat in the spring on grounds already sown last fall, at not above 75 per cent. of last year's acreage. Throughout the United Kingdom and western Europe, owing also to the spindling and unhealthy appearance of the wheat so far as it has made its appearance above ground, not above two-thirds of an average crop of wheat is expected. The *Mark Lane Express* of February 5 said: "Some of the wheat which has been in the ground a long time is now making its appearance, and the thinness and weakness of the plant on much of the late-sown acreage is becoming more pronounced. The October wheats do not improve in appearance, and some of them are decidedly going backward;" and again, in the same issue: "It would appear reasonable to suppose that the acreage of the 1883 wheat crop will not be greater than it is now; and, if unfavorable weather should continue, it is very possible, and not at all improbable, that it may be less." The *North British Agriculturalist* of the 7th inst also says: "Not a little of the wheat seeded in the autumn throughout the kingdom presents such a miserable appearance that ploughing it up will to a larger extent than usual be inevitable. This will tend to reduce the acreage."

Notwithstanding that there has been an improvement in the weather in Europe in the last week, there was also a continuance of quite as bad if not worse weather for at least ten days after the dates above mentioned, and the more recent improvement would scarcely make the general prospect better than it was on February 5 and 7.

The total exports of wheat from all Russia in the year to October 1, 1882, were equal to 58,315,356 bushels, against 25,509,972 in the previous year.

The quantity of wheat afloat from British India was, at last mail dates, 1,249,504 bushels, against 1,261,248 bushels one week previous, and against 4,184,336 bushels a year ago.

The following foreign quotations show the course of the foreign markets during the last week to have been much steadier than the American markets. Liverpool quotations for American red wheat have remained unchanged at 9s. 8d. per cental from February 15 to February 23. The quotations for wheat "off coast" have been as follows per quarter, viz.: February 15, 48s. 3d.; February 16, 48s. 3d.; February 17, 48s. 3d.; February 19, 48s. 6d.; February 21, 48s. @ 48s. 6d.; February 23, 48s.
